Chapter 1

Introduction

The **MOSEK** Optimization Suite 11.0.27 is a powerful software package capable of solving large-scale optimization problems of the following kind:

- linear,
- conic:
 - conic quadratic (also known as second-order cone),
 - involving the exponential cone,
 - involving the power cone,
 - semidefinite,
- convex quadratic and quadratically constrained,
- integer.

In order to obtain an overview of features in the **MOSEK** Optimization Suite consult the [product introduction guide](#).

The most widespread class of optimization problems is *linear optimization problems*, where all relations are linear. The tremendous success of both applications and theory of linear optimization can be ascribed to the following factors:

- The required data are simple, i.e. just matrices and vectors.
- Convexity is guaranteed since the problem is convex by construction.
- Linear functions are trivially differentiable.
- There exist very efficient algorithms and software for solving linear problems.
- Duality properties for linear optimization are nice and simple.

Even if the linear optimization model is only an approximation to the true problem at hand, the advantages of linear optimization may outweigh the disadvantages. In some cases, however, the problem formulation is inherently nonlinear and a linear approximation is either intractable or inadequate. *Conic optimization* has proved to be a very expressive and powerful way to introduce nonlinearities, while preserving all the nice properties of linear optimization listed above.

The fundamental expression in linear optimization is a linear expression of the form

$$Ax - b \geq 0.$$

In conic optimization this is replaced with a wider class of constraints

$$Ax - b \in \mathcal{K}$$

where \mathcal{K} is a *convex cone*. For example in 3 dimensions \mathcal{K} may correspond to an ice cream cone. The conic optimizer in **MOSEK** supports a number of different types of cones \mathcal{K} , which allows a surprisingly large number of nonlinear relations to be modeled, as described in the [MOSEK Modeling Cookbook](#), while preserving the nice algorithmic and theoretical properties of linear optimization.

1.1 Why the Command Line Tools?

The **MOSEK** capabilities can be accessed from the command line without the need to use any programming language. The user can input optimization problems using files in a variety of *formats*, or via the AMPL language shell.

The Command Line Tools provides access to:

- Linear Optimization (LO)
- Conic Quadratic (Second-Order Cone) Optimization (CQO, SOCO)
- Power Cone Optimization
- Conic Exponential Optimization (CEO)
- Convex Quadratic and Quadratically Constrained Optimization (QO, QCQO)
- Semidefinite Optimization (SDO)
- Mixed-Integer Optimization (MIO) including Disjunctive Constraints (DJC)

as well as to additional utilities for:

- problem analysis,
- sensitivity analysis,
- infeasibility diagnostics.

Chapter 3

License Agreement

3.1 MOSEK end-user license agreement

Before using the **MOSEK** software, please read the license agreement available in the distribution at <MSKHOME>/mosek/11.0/mosek-eula.pdf or on the **MOSEK** website <https://mosek.com/products/license-agreement>. By using **MOSEK** you agree to the terms of that license agreement.

3.2 Third party licenses

MOSEK uses some third-party open-source libraries. Their license details follow.

zlib

MOSEK uses the *zlib* library obtained from the [zlib website](#). The license agreement for *zlib* is shown in Listing 3.1.

Listing 3.1: *zlib* license.

```
zlib.h -- interface of the 'zlib' general purpose compression library  
version 1.2.7, May 2nd, 2012
```

```

```

```
This software is provided 'as-is', without any express or implied  
warranty. In no event will the authors be held liable for any damages  
arising from the use of this software.
```

```
Permission is granted to anyone to use this software for any purpose,  
including commercial applications, and to alter it and redistribute it  
freely, subject to the following restrictions:
```

1. The origin of this software must not be misrepresented; you must not
claim that you wrote the original software. If you use this software
in a product, an acknowledgment in the product documentation would be
appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be
misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

oneTBB

MOSEK uses the *oneTBB* parallelization library which is part of *oneAPI* developed by Intel, obtained from [github/oneTBB](https://github.com/oneapi-src/oneTBB), licensed under the Apache License 2.0. The license agreement for *oneTBB* can be found in <https://github.com/oneapi-src/oneTBB/blob/master/LICENSE.txt>.

Chapter 4

Installation

In this section we discuss how to install and setup the **MOSEK** Command Line Tools.

Important: Before running this **MOSEK** interface please make sure that you:

- Installed **MOSEK** correctly. Some operating systems require extra steps. See the [Installation guide](#) for instructions and common troubleshooting tips.
 - Set up a license. See the [Licensing guide](#) for instructions.
-

Locating files in the **MOSEK** Optimization Suite

The relevant files of the Command Line Tools are organized as reported in [Table 4.1](#).

Table 4.1: Relevant files for the Command Line Tools.

Relative Path	Description	Label
<MSKHOME>/mosek/11.0/tools/platform/<PLATFORM>/bin	Binaries	<BINDIR>
<MSKHOME>/mosek/11.0/tools/platform/<PLATFORM>/bin/mosek	Mosek executable	
<MSKHOME>/mosek/11.0/tools/examples/data	Examples	<EXDIR>

where

- <MSKHOME> is the folder in which the **MOSEK** Optimization Suite has been installed,
- <PLATFORM> is the actual platform among those supported by **MOSEK**, i.e. `win64x86`, `linux64x86`, `linuxaarch64` or `osxaarch64`.

Setting up paths

The executable file is ready for use. It may be convenient to add the directory <BINDIR> to the environment variable `PATH`, and then **MOSEK** can simply be used by typing

```
mosek
```

in the command line.

4.1 Testing the installation

To test that Command Line Tools has been installed correctly go to the examples directory <EXDIR> and run **MOSEK** on any of the input files, for example `lo1.mps`:

```
mosek lo1.mps
```

Is should produce output similar to:

```
MOSEK Version 8.0.0.53 (Build date: 2017-1-12 22:21:45)
Copyright (c) MOSEK ApS, Denmark. WWW: mosek.com
Platform: Linux/64-X86

Open file 'lo1.mps'
Reading started.

[....]

Optimizer started.
Interior-point optimizer started.

Open file 'lo1.sol'
Start writing.
done writing. Time: 0.00

Open file 'lo1.bas'
Start writing.
done writing. Time: 0.00

Return code - 0  [MSK_RES_OK]
```

Chapter 5

The Command Line Tool

5.1 Introduction

The **MOSEK** command line tool is used to solve optimization problems from the operating system command line. It is invoked as follows

```
mosek [options] [filename]
```

where both `[options]` and `[filename]` are optional arguments:

- `[options]` consists of command line arguments that modify the behavior of **MOSEK**. They are listed in Sec. 5.5. In particular, options can be used to set optimizer parameters.
- `[filename]` is a file describing the optimization problem. The **MOSEK** command line accepts files in any of the *supported file formats* or in the AMPL .nl format.

If no arguments are given, **MOSEK** will display a splash screen and exit.

```
user@host:~$ mosek/8/tools/platform/linux64x86/bin/mosek

MOSEK Version 8.0.0.32(BETA) (Build date: 2016-7-12 10:29:26)
Copyright (c) MOSEK ApS, Denmark. WWW: mosek.com
Platform: Linux/64-X86

*** No input file specified. No optimization is performed.

Return code - 0  [MSK_RES_OK]
```

5.2 Files

The **MOSEK** command line tool communicates with the user via files and prints some execution logs and solution summary to the terminal.

Input files

Optimization problems are read from files. See Sec. 11 for details.

File format conversion

To convert between two file formats supported by **MOSEK** use the option `-x` together with `-out` to specify the target file name. The target file type must support the problem type of the source file, otherwise the conversion will be partial. For instance in case a MPS file must be converted in a more readable OPF format, the following line can be used

```
mosek -x -out lo1.opf lo1.mps
```

With the `-x` option the solver will not actually solve the problem.

Output files

Solutions are written to files:

- `.bas` - basic solution,
- `.sol` - interior point solution,
- `.itg` - integer solution (the only available solution for mixed-integer problems).

For linear problems both the basic and interior point solution may be present. Infeasibility certificates are stored in the same files. See Sec. 11.8 for details.

5.3 Example

To solve a problem stored in file, say `lo1.mps`, write:

```
mosek lo1.mps
```

The solver will

- read `lo1.mps` from disk,
- solve the problem and display the solution log and
- store the relevant solution files if any solution exists; file content explained in Sec. 11.8.

```
MOSEK Version 8.0.0.34(BETA) (Build date: 2016-8-24 00:51:13)
```

```
Copyright (c) MOSEK ApS, Denmark. WWW: mosek.com
```

```
Platform: Linux/64-X86
```

5.4 Solver Parameters

MOSEK comes with a large number of parameters that allows the user to tune the behavior of the optimizer. The typical settings which can be changed with solver parameters include:

- choice of the optimizer for linear problems,
- choice of primal/dual solver,
- turning presolve on/off,
- turning heuristics in the mixed-integer optimizer on/off,
- level of multi-threading,
- feasibility tolerances,
- solver termination criteria,
- behaviour of the license manager,

and more. All parameters have default settings which will be suitable for most typical users. Each parameter is identified by a unique string name and it can accept either integers or symbolic names, floating point values or symbolic strings. Please refer to Sec. 10.2 for the complete list of available solver parameters.

5.4.1 Setting from command line

Setting solver parameters is possible using the command line option `-d`. If multiple parameters must be specified, option `-d` must be repeated for each one. For example, the next command will switch off presolve, set a feasibility tolerance and solve the problem from `lo1.opf`:

```
mosek -d MSK_IPAR_PRESOLVE_USE MSK_OFF -d MSK_DPAR_INTPNT_TOL_PFEAS 1.0e-8 lo1.opf
```

5.4.2 Using the Parameter File

Solver parameters can also be set using a parameter file, for example:

```
BEGIN MOSEK
% This is a comment.
% The subsequent line tells MOSEK that an optimal
% basis should be computed by the interior-point optimizer.
MSK_IPAR_PRESOLVE_USE      MSK_OFF
MSK_DPAR_INTPNT_TOL_PFEAS   1.0e-9
END MOSEK
```

The syntax of the parameter file must obey a few simple rules:

- The file must begin with `BEGIN MOSEK` and end with `END MOSEK`.
- Empty lines and lines starting from a `%` sign are ignored.
- Each line contains a valid **MOSEK** parameter name followed by its value.

The parameter file can have any name. Assuming it has been called `mosek.par`, it can be used using the `-p` option as follows:

```
mosek -p mosek.par afiro.mps
```

Command-line parameters override those from the parameter file in case of repetition. For instance

```
mosek -p mosek.par -d MSK_DPAR_INTPNT_TOL_PFEAS 1.0e-8 afiro.mps
```

will set `MSK_DPAR_INTPNT_TOL_PFEAS` to 10^{-8} using the value provided on the command line.

5.5 Command Line Arguments

The following list shows the available command-line arguments for **MOSEK**:

`-anapro`

Analyze the problem data.

`-anasoli <name>`

Analyze the initial solution name e.g. `-anasoli bas`.

`-anasolo <name>`

Analyze the final solution name e.g. `-anasolo itg`.

`-basi <name>`

Input basic solution file name.

`-baso <name>`

Output basic solution file name.

`-d <name> <value>`

Define the value `value` for the **MOSEK** parameter `name`.

```

-dbgmem <name>
    Name of memory debug file.
-dualout <name>
    Output dual problem file name.
-f
    Complete license information is printed.
-h, -?
    Help.
-inti <name>
    Input integer solution file name.
-into <name>
    Output integer solution file name.
-itri <name>
    Input interior point solution file name.
-itro <name>
    Output interior point solution file name.
-info <name>
    Infeasible subproblem output file name.
-infrepo <name>
    Feasibility reparation output file.
-jsoli <name>
    Input JSON format solution file name.
-jsolo <name>
    Output JSON format solution file name.
-l,-L <dir>
    dir is the directory where the MOSEK license file mosek.lic is located.
-max
    The problem is maximized.
-min
    The problem is minimized.
-n
    Ignore errors in subsequent parameter settings.
-optserv <url>
    Use an OptServer specified by an URL of the form http://host:port.
-out <name>
    Write the task to a data file named name. See Sec. 11.
-p <name>, -pari <name>
    Name of the input parameter file.
-paro <name>
    Name of the output parameter file.
-primalrepair
    Repair a primal infeasible problem. See Sec. 9.2.
-r
    If the option is present, the program returns -1 if an error occurred, otherwise 0.
-removeitg
    Removes all integer constraints after reading the problem.
-rout <name>
    If the option is present, the program writes the return code to file name.
-q <name>
    Name of an optional log file.
-sen <file>
    Perform sensitivity analysis based on file.

```

-silent

As little information as possible is send to the terminal.

-toconic

Translate to conic form after reading.

-v

MOSEK version is printed and no optimization is performed.

-w

If this options is on, then **MOSEK** will wait for a license.

-x

Do not run the optimizer. Useful for converting between file formats.

-=

List all possible solver parameters with default value, lower bound and upper bound (if applicable).

5.6 The license system

MOSEK is a commercial product that **always** needs a valid license to work. **MOSEK** uses a third party license manager to implement license checking. The number of license tokens provided determines the number of optimizations that can be run simultaneously.

By default a license token remains checked out for the whole execution of the command line tool. If the license is not unlimited, then the number of tokens determines the maximal number of processes that can run simultaneously. In this case setting the license wait flag with the parameter *MSK_IPAR_LICENSE_WAIT* will force **MOSEK** to wait until a license token becomes available instead of returning with an error.

Chapter 6

Debugging Tutorials

This collection of tutorials contains basic techniques for debugging optimization problems using tools available in **MOSEK**: optimizer log, solution summary, infeasibility report, command-line tools. It is intended as a first line of technical help for issues such as: Why do I get solution status *unknown* and how can I fix it? Why is my model infeasible while it shouldn't be? Should I change some parameters? Can the model solve faster? etc.

The major steps when debugging a model are always:

- Consult the log output.
- Run the optimization and analyze the log output, see Sec. 6.1. In particular:
 - check if the problem setup (number of constraints/variables etc.) matches your expectation.
 - check solution summary and solution status.
- Dump the problem to disk if necessary to continue analysis.
 - use a human-readable text format, preferably `*.ptf` if you want to check the problem structure by hand. Assign names to variables and constraints to make them easier to identify.
 - use the **MOSEK** native format `*.task.gz` when submitting a bug report or support question.
- Fix problem setup, improve the model, locate infeasibility or adjust parameters, depending on the diagnosis.

See the following sections for details.

6.1 Understanding optimizer log

The optimizer produces a log which splits roughly into four sections:

1. summary of the input data,
2. presolve and other pre-optimize problem setup stages,
3. actual optimizer iterations,
4. solution summary.

In this tutorial we show how to analyze the most important parts of the log when initially debugging a model: input data (1) and solution summary (4). For the iterations log (3) see Sec. 8.3.4 or Sec. 8.4.3.

6.1.1 Input data

If **MOSEK** behaves very far from expectations it may be due to errors in problem setup. The log file will begin with a summary of the structure of the problem, which looks for instance like:

```
Problem
Name          :
Objective sense : minimize
Type          : CONIC (conic optimization problem)
Constraints   : 234
Affine conic cons. : 5348 (6444 rows)
Disjunctive cons. : 0
Cones         : 0
Scalar variables : 20693
Matrix variables : 1 (scalarized: 45)
Integer variables : 0
```

This can be consulted to eliminate simple errors: wrong objective sense, wrong number of variables etc. Note that some modeling tools can introduce additional variables and constraints to the model and perturb the model even further (such as by dualizing). In most **MOSEK** APIs the problem dimensions should match exactly what the user specified.

If this is not sufficient a bit more information can be obtained by dumping the problem to a file (see Sec. 6) and using the `anapro` option of any of the command line tools. This will produce a longer summary similar to:

```
** Variables
scalar: 20414    integer: 0      matrix: 0
low: 2082        up: 5014       ranged: 0        free: 12892      fixed: 426

** Constraints
all: 20413
low: 10028        up: 0          ranged: 0        free: 0          fixed: 10385

** Affine conic constraints (ACC)
QUAD: 1           dims: 2865: 1
RQUAD: 2507       dims: 3: 2507

** Problem data (numerics)
|c|            nnz: 10028      min=2.09e-05      max=1.00e+00
|A|            nnz: 597023     min=1.17e-10      max=1.00e+00
blk            fin: 2508       min=-3.60e+09     max=2.75e+05
bux            fin: 5440       min=0.00e+00      max=2.94e+08
blc            fin: 20413      min=-7.61e+05     max=7.61e+05
buc            fin: 10385      min=-5.00e-01      max=0.00e+00
|F|            nnz: 612301     min=8.29e-06      max=9.31e+01
|g|            nnz: 1203       min=5.00e-03      max=1.00e+00
```

Again, this can be used to detect simple errors, such as:

- Wrong type of conic constraint was used or it has wrong dimension.
- The bounds for variables or constraints are incorrect or incomplete.
- The model is otherwise incomplete.
- Suspicious values of coefficients.
- For various data sizes the model does not scale as expected.

Finally saving the problem in a human-friendly text format such as LP or PTF (see Sec. 6) and analyzing it by hand can reveal if the model is correct.

Warnings and errors

At this stage the user can encounter warnings which should not be ignored, unless they are well-understood. They can also serve as hints as to numerical issues with the problem data. A typical warning of this kind is

```
MOSEK warning 53: A numerically large upper bound value 2.9e+08 is specified for ↴variable 'absh[107]' (2613).
```

Warnings do not stop the problem setup. If, on the other hand, an error occurs then the model will become invalid. The user should make sure to test for errors/exceptions from all API calls that set up the problem and validate the data.

6.1.2 Solution summary

The last item in the log is the solution summary.

Continuous problem

Optimal solution

A typical solution summary for a continuous (linear, conic, quadratic) problem looks like:

```
Problem status : PRIMAL_AND_DUAL_FEASIBLE
Solution status : OPTIMAL
Primal.  obj: 8.7560516107e+01    nrm: 1e+02    Viol.  con: 3e-12    var: 0e+00    ↴
      ↴acc: 3e-11
Dual.   obj: 8.7560521345e+01    nrm: 1e+00    Viol.  con: 5e-09    var: 9e-11    ↴
      ↴acc: 0e+00
```

It contains the following elements:

- Problem and solution status.
- A summary of the primal solution: objective value, infinity norm of the solution vector and maximal violations of variables and constraints of different types. The violation of a linear constraint such as $a^T x \leq b$ is $\max(a^T x - b, 0)$. The violation of a conic constraint is the distance to the cone.
- The same for the dual solution.

The features of the solution summary which characterize a very good and accurate solution and a well-posed model are:

- **Status:** The solution status is **OPTIMAL**.
- **Duality gap:** The primal and dual objective values are (almost) identical, which proves the solution is (almost) optimal.
- **Norms:** Ideally the norms of the solution and the objective values should not be too large. This of course depends on the input data, but a huge solution norm can be an indicator of issues with the scaling, conditioning and/or well-posedness of the model. It may also indicate that the problem is borderline between feasibility and infeasibility and sensitive to small perturbations in this respect.
- **Violations:** The violations are close to zero, which proves the solution is (almost) feasible. Observe that due to rounding errors it can be expected that the violations are proportional to the norm (**nrm:**) of the solution. It is rarely the case that violations are exactly zero.

Solution status UNKNOWN

A typical example with solution status UNKNOWN due to numerical problems will look like:

```
Problem status : UNKNOWN
Solution status : UNKNOWN
Primal. obj: 1.3821656824e+01    nrm: 1e+01    Viol. con: 2e-03    var: 0e+00    □
  ↵acc: 0e+00
Dual.   obj: 3.0119004098e-01    nrm: 5e+07    Viol. con: 4e-16    var: 1e-01    □
  ↵acc: 0e+00
```

Note that:

- The primal and dual objective are very different.
- The dual solution has very large norm.
- There are considerable violations so the solution is likely far from feasible.

Follow the hints in Sec. 6.2 to resolve the issue.

Solution status UNKNOWN with a potentially useful solution

Solution status UNKNOWN does not necessarily mean that the solution is completely useless. It only means that the solver was unable to make any more progress due to numerical difficulties, and it was not able to reach the accuracy required by the termination criteria (see Sec. 8.3.2). Consider for instance:

```
Problem status : UNKNOWN
Solution status : UNKNOWN
Primal. obj: 3.4531019648e+04    nrm: 1e+05    Viol. con: 7e-02    var: 0e+00    □
  ↵acc: 0e+00
Dual.   obj: 3.4529720645e+04    nrm: 8e+03    Viol. con: 1e-04    var: 2e-04    □
  ↵acc: 0e+00
```

Such a solution may still be useful, and it is always up to the user to decide. It may be a good enough approximation of the optimal point. For example, the large constraint violation may be due to the fact that one constraint contained a huge coefficient.

Infeasibility certificate

A primal infeasibility certificate is stored in the dual variables:

```
Problem status : PRIMAL_INFEASIBLE
Solution status : PRIMAL_INFEASIBLE_CER
Dual.   obj: 2.9238975853e+02    nrm: 6e+02    Viol. con: 0e+00    var: 1e-11    □
  ↵acc: 0e+00
```

It is a Farkas-type certificate as described in Sec. 7.2.2. In particular, for a good certificate:

- The dual objective is positive for a minimization problem, negative for a maximization problem. Ideally it is well bounded away from zero.
- The norm is not too big and the violations are small (as for a solution).

If the model was not expected to be infeasible, the likely cause is an error in the problem formulation. Use the hints in Sec. 6.1.1 and Sec. 6.3 to locate the issue.

Just like a solution, the infeasibility certificate can be of better or worse quality. The infeasibility certificate above is very solid. However, there can be less clear-cut cases, such as for example:

```
Problem status : PRIMAL_INFEASIBLE
Solution status : PRIMAL_INFEASIBLE_CER
Dual.   obj: 1.6378689238e-06    nrm: 6e+05    Viol. con: 7e-03    var: 2e-04    □
  ↵acc: 0e+00
```

This infeasibility certificate is more dubious because the dual objective is positive, but barely so in comparison with the large violations. It also has rather large norm. This is more likely an indication that the problem is borderline between feasibility and infeasibility or simply ill-posed and sensitive to tiny variations in input data. See Sec. 6.3 and Sec. 6.2.

The same remarks apply to dual infeasibility (i.e. unboundedness) certificates. Here the primal objective should be negative a minimization problem and positive for a maximization problem.

6.1.3 Mixed-integer problem

Optimal integer solution

For a mixed-integer problem there is no dual solution and a typical optimal solution report will look as follows:

```
Problem status : PRIMAL_FEASIBLE
Solution status : INTEGER_OPTIMAL
Primal. obj: 6.0111122960e+06      nrm: 1e+03      Viol. con: 2e-13      var: 2e-14      □
→itg: 5e-15
```

The interpretation of all elements is as for a continuous problem. The additional field `itg` denotes the maximum violation of an integer variable from being an exact integer.

Feasible integer solution

If the solver found an integer solution but did not prove optimality, for instance because of a time limit, the solution status will be `PRIMAL_FEASIBLE`:

```
Problem status : PRIMAL_FEASIBLE
Solution status : PRIMAL_FEASIBLE
Primal. obj: 6.0114607792e+06      nrm: 1e+03      Viol. con: 2e-13      var: 2e-13      □
→itg: 4e-15
```

In this case it is valuable to go back to the optimizer summary to see how good the best solution is:

31	35	1	0	6.0114607792e+06	6.0078960892e+06	0.06	□
→			4.1				

```
Objective of best integer solution : 6.011460779193e+06
Best objective bound           : 6.007896089225e+06
```

In this case the best integer solution found has objective value `6.011460779193e+06`, the best proved lower bound is `6.007896089225e+06` and so the solution is guaranteed to be within 0.06% from optimum. The same data can be obtained as information items through an API. See also Sec. 8.4 for more details.

Infeasible problem

If the problem is declared infeasible the summary is simply

```
Problem status : PRIMAL_INFEASIBLE
Solution status : UNKNOWN
Primal. obj: 0.0000000000e+00      nrm: 0e+00      Viol. con: 0e+00      var: 0e+00      □
→itg: 0e+00
```

If infeasibility was not expected, consult Sec. 6.3.

6.2 Addressing numerical issues

The suggestions in this section should help diagnose and solve issues with numerical instability, in particular UNKNOWN solution status or solutions with large violations. Since numerically stable models tend to solve faster, following these hints can also dramatically shorten solution times.

We always recommend that issues of this kind are addressed by reformulating or rescaling the model, since it is the modeler who has the best insight into the structure of the problem and can fix the cause of the issue.

Some information about the numerical properties of the data can be obtained by dumping the problem to a file (see Sec. 6) and using the `anapro` option of any of the command line tools.

6.2.1 Formulating problems

Scaling

Make sure that all the data in the problem are of comparable orders of magnitude. This applies especially to the linear constraint matrix. Use Sec. 6.1.1 if necessary. For example a report such as

A	nnz: 597023	min=1.17e-6	max=2.21e+5
---	-------------	-------------	-------------

means that the ratio of largest to smallest elements in A is 10^{11} . In this case the user should rescale or reformulate the model to avoid such spread which makes it difficult for **MOSEK** to scale the problem internally. In many cases it may be possible to change the units, i.e. express the model in terms of rescaled variables (for instance work with millions of dollars instead of dollars, etc.).

Similarly, if the objective contains very different coefficients, say

$$\text{maximize } 10^{10}x + y$$

then it is likely to lead to inaccuracies. The objective will be dominated by the contribution from x and y will become insignificant.

Removing huge bounds

Never use a very large number as replacement for ∞ . Instead define the variable or constraint as unbounded from below/above. Similarly, avoid artificial huge bounds if you expect they will not become tight in the optimal solution.

Avoiding linear dependencies

As much as possible try to avoid linear dependencies and near-linear dependencies in the model. See Example 6.3.

Avoiding ill-posedness

Avoid continuous models which are ill-posed: the solution space is degenerate, for example consists of a single point (technically, the Slater condition is not satisfied). In general, this refers to problems which are borderline between feasible and infeasible. See Example 6.1.

Scaling the expected solution

Try to formulate the problem in such a way that the expected solution (both primal and dual) is not very large. Consult the solution summary Sec. 6.1.2 to check the objective values or solution norms.

6.2.2 Further suggestions

Here are other simple suggestions that can help locate the cause of the issues. They can also be used as hints for how to tune the optimizer if fixing the root causes of the issue is not possible.

- Remove the objective and solve the feasibility problem. This can reveal issues with the objective.
- Change the objective or change the objective sense from minimization to maximization (if applicable). If the two objective values are almost identical, this may indicate that the feasible set is very small, possibly degenerate.
- Perturb the data, for instance bounds, very slightly, and compare the results.
- For linear problems: solve the problem using a different optimizer by setting the parameter `MSK_IPAR_OPTIMIZER` and compare the results.
- Force the optimizer to solve the primal/dual versions of the problem by setting the parameter `MSK_IPAR_INTPNT_SOLVE_FORM` or `MSK_IPAR_SIM_SOLVE_FORM`. **MOSEK** has a heuristic to decide whether to dualize, but for some problems the guess is wrong an explicit choice may give better results.
- Solve the problem without presolve or some of its parts by setting the parameter `MSK_IPAR_PRESOLVE_USE`, see Sec. 8.1.
- Use different numbers of threads (`MSK_IPAR_NUM_THREADS`) and compare the results. Very different results indicate numerical issues resulting from round-off errors.

If the problem was dumped to a file, experimenting with various parameters is facilitated with the **MOSEK** Command Line Tool or **MOSEK** Python Console Sec. 6.4.

6.2.3 Typical pitfalls

Example 6.1 (Ill-posedness). A toy example of this situation is the feasibility problem

$$(x - 1)^2 \leq 1, \quad (x + 1)^2 \leq 1$$

whose only solution is $x = 0$ and moreover replacing any 1 on the right hand side by $1 - \varepsilon$ makes the problem infeasible and replacing it by $1 + \varepsilon$ yields a problem whose solution set is an interval (fully-dimensional). This is an example of ill-posedness.

Example 6.2 (Huge solution). If the norm of the expected solution is very large it may lead to numerical issues or infeasibility. For example the problem

$$(10^{-4}, x, 10^3) \in \mathcal{Q}_r^3$$

may be declared infeasible because the expected solution must satisfy $x \geq 5 \cdot 10^9$.

Example 6.3 (Near linear dependency). Consider the following problem:

$$\begin{aligned} & \text{minimize} \\ & \text{subject to} \quad x_1 + x_2 &= 1, \\ & & x_3 + x_4 &= 1, \\ & -x_1 - x_3 &= -1 + \varepsilon, \\ & -x_2 - x_4 &= -1, \\ & x_1, x_2, x_3, x_4 &\geq 0. \end{aligned}$$

If we add the equalities together we obtain:

$$0 = \varepsilon$$

which is infeasible for any $\varepsilon \neq 0$. Here infeasibility is caused by a linear dependency in the constraint matrix coupled with a precision error represented by the ε . Indeed if a problem contains linear dependencies then the problem is either infeasible or contains redundant constraints. In the above case any of the equality constraints can be removed while not changing the set of feasible solutions. To summarize linear dependencies in the constraints can give rise to infeasible problems and therefore it is better to avoid them.

Example 6.4 (Presolving very tight bounds). Next consider the problem

$$\begin{aligned} & \text{minimize} \\ & \text{subject to } x_1 - 0.01x_2 = 0, \\ & \quad x_2 - 0.01x_3 = 0, \\ & \quad x_3 - 0.01x_4 = 0, \\ & \quad x_1 \geq -10^{-9}, \\ & \quad x_1 \leq 10^{-9}, \\ & \quad x_4 \geq 10^{-4}. \end{aligned}$$

Now the **MOSEK** presolve will, for the sake of efficiency, fix variables (and constraints) that have tight bounds where tightness is controlled by the parameter `MSK_DPAR_PRESOLVE_TOL_X`. Since the bounds

$$-10^{-9} \leq x_1 \leq 10^{-9}$$

are tight, presolve will set $x_1 = 0$. It easy to see that this implies $x_4 = 0$, which leads to the incorrect conclusion that the problem is infeasible. However a tiny change of the value 10^{-9} makes the problem feasible. In general it is recommended to avoid ill-posed problems, but if that is not possible then one solution is to reduce parameters such as `MSK_DPAR_PRESOLVE_TOL_X` to say 10^{-10} . This will at least make sure that presolve does not make the undesired reduction.

6.3 Debugging infeasibility

When solving an optimization problem one typically expects to get an optimal solution, but in some cases, either by design, or (most frequently) due to an error in the formulation, the problem may become infeasible (have no solution at all).

This section

- describes the intuitions behind infeasibility,
- helps to debug (unexpectedly) infeasible problems using the command line tool and by inspecting infeasibility reports and problem data by hand,
- gives some hints for how to modify the formulation to identify the reasons for infeasibility.

An infeasibility certificate is only available for continuous problems, however the hints in Sec. 6.3.4 apply to a large extent also to mixed-integer problems.

6.3.1 Numerical issues

Infeasible problem status may be just an artifact of numerical issues appearing when the problem is badly-scaled, barely feasible or otherwise ill-conditioned so that it is unstable under small perturbations of the data or round-off errors. This may be visible in the solution summary if the infeasibility certificate has poor quality. See Sec. 6.1.2 for how to diagnose that and Sec. 6.2 for possible hints. Sec. 6.2.3 contains examples of situations which may lead to infeasibility for numerical reasons.

We refer to Sec. 6.2 for further information on dealing with those sort of issues. For the rest of this section we concentrate on the case when the solution summary leaves little doubt that the problem solved by the optimizer actually is infeasible.

6.3.2 Locating primal infeasibility

As an example of a primal infeasible problem consider minimizing the cost of transportation between a number of production plants and stores: Each plant produces a fixed number of goods, and each store has a fixed demand that must be met. Supply, demand and cost of transportation per unit are given in Fig. 6.1.

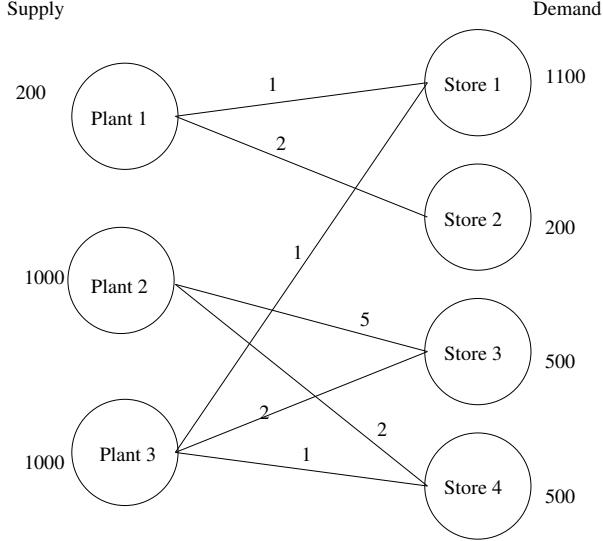

Fig. 6.1: Supply, demand and cost of transportation.

The problem represented in Fig. 6.1 is infeasible, since the total demand

$$2300 = 1100 + 200 + 500 + 500$$

exceeds the total supply

$$2200 = 200 + 1000 + 1000$$

If we denote the number of transported goods from plant i to store j by x_{ij} , the problem can be formulated as the LP:

$$\begin{array}{llllllllll} \text{minimize} & x_{11} & + & 2x_{12} & + & 5x_{23} & + & 2x_{24} & + & x_{31} & + & 2x_{33} & + & x_{34} \\ \text{subject to} & s_0 : & x_{11} & + & x_{12} & & & & & & & & & & \leq 200, \\ & s_1 : & & & & x_{23} & + & x_{24} & & & & & & & \leq 1000, \\ & s_2 : & & & & & & & x_{31} & + & x_{33} & + & x_{34} & & \leq 1000, \\ & d_0 : & x_{11} & & & & & & & & & & & & = 1100, \\ & d_1 : & & x_{12} & & & & & & & & & & & = 200, \\ & d_2 : & & & x_{23} & + & & & & x_{33} & & & & & = 500, \\ & d_3 : & & & & x_{24} & + & & & & x_{34} & = 500, \\ & & & & & & & & & & & & & x_{ij} & \geq 0. \end{array} \quad (6.1)$$

Solving problem (6.1) using **MOSEK** will result in an infeasibility status. The infeasibility certificate is contained in the dual variables an and can be accessed from an API. The variables and constraints with nonzero solution values form an infeasible subproblem, which frequently is very small. See Sec. 7.1.2 or Sec. 7.2.2 for detailed specifications of infeasibility certificates.

A short infeasibility report can also be printed to the log stream. It can be turned on by setting the parameter `MSK_IPAR_INFEAS_REPORT_AUTO` to `MSK_ON`. This causes **MOSEK** to print a report on variables and constraints which are involved in infeasibility in the above sense, i.e. have nonzero values in the certificate. The parameter `MSK_IPAR_INFEAS_REPORT_LEVEL` controls the amount of information presented in the infeasibility report. The default value is 1. For the above example the report is

Primal infeasibility report

Problem status: The problem is primal infeasible

The following constraints are involved in the primal infeasibility.

Index	Name	Lower bound	Upper bound	Dual lower	Dual upper
0	s0	none	200	0	1
2	s2	none	1000	0	1
3	d0	1100	1100	1	0
4	d1	200	200	1	0

The following bound constraints are involved in the primal infeasibility.

Index	Name	Lower bound	Upper bound	Dual lower	Dual upper
5	x33	0	none	1	0
6	x34	0	none	1	0

The infeasibility report is divided into two sections corresponding to constraints and variables. It is a selection of those lines from the problem solution which are important in understanding primal infeasibility. In this case the constraints s0, s2, d0, d1 and variables x33, x34 are of importance because of nonzero dual values. The columns Dual lower and Dual upper contain the values of dual variables s_l^c, s_u^c, s_l^x and s_u^x in the primal infeasibility certificate (see Sec. 7.1.2).

In our example the certificate means that an appropriate linear combination of constraints s0, s1 with coefficient $s_u^c = 1$, constraints d0 and d1 with coefficient $s_u^c - s_l^c = 0 - 1 = -1$ and lower bounds on x33 and x34 with coefficient $-s_l^x = -1$ gives a contradiction. Indeed, the combination of the four involved constraints is $x_{33} + x_{34} \leq -100$ (as indicated in the introduction, the difference between supply and demand).

It is also possible to extract the infeasible subproblem with the command-line tool. For an infeasible problem called `infeas.lp` the command:

```
mosek -d MSK_IPAR_INFEAS_REPORT_AUTO MSK_ON infeas.lp -info rinfeas.lp
```

will produce the file `rinfeas.bas.inf.lp` which contains the infeasible subproblem. Because of its size it may be easier to work with than the original problem file.

Returning to the transportation example, we discover that removing the fifth constraint $x_{12} = 200$ makes the problem feasible. Almost all undesired infeasibilities should be fixable at the modeling stage.

6.3.3 Locating dual infeasibility

A problem may also be *dual infeasible*. In this case the primal problem is usually unbounded, meaning that feasible solutions exists such that the objective tends towards infinity. For example, consider the problem

$$\begin{aligned} \text{maximize} \quad & 200y_1 + 1000y_2 + 1000y_3 + 1100y_4 + 200y_5 + 500y_6 + 500y_7 \\ \text{subject to} \quad & y_1 + y_4 \leq 1, \quad y_1 + y_5 \leq 2, \quad y_2 + y_6 \leq 5, \quad y_2 + y_7 \leq 2, \\ & y_3 + y_4 \leq 1, \quad y_3 + y_6 \leq 2, \quad y_3 + y_7 \leq 1 \\ & y_1, y_2, y_3 \leq 0 \end{aligned}$$

which is dual to (6.1) (and therefore is dual infeasible). The dual infeasibility report may look as follows:

Dual infeasibility report

Problem status: The problem is dual infeasible

(continues on next page)

The following constraints are involved in the dual infeasibility.

Index	Name	Activity	Objective	Lower bound	Upper bound
5	x33	-1		none	2
6	x34	-1		none	1

The following variables are involved in the dual infeasibility.

Index	Name	Activity	Objective	Lower bound	Upper bound
0	y1	-1	200	none	0
2	y3	-1	1000	none	0
3	y4	1	1100	none	none
4	y5	1	200	none	none

In the report we see that the variables y_1, y_3, y_4, y_5 and two constraints contribute to infeasibility with non-zero values in the **Activity** column. Therefore

$$(y_1, \dots, y_7) = (-1, 0, -1, 1, 1, 0, 0)$$

is the dual infeasibility certificate as in Sec. 7.1.2. This just means, that along the ray

$$(0, 0, 0, 0, 0, 0) + t(y_1, \dots, y_7) = (-t, 0, -t, t, t, 0, 0), \quad t > 0,$$

which belongs to the feasible set, the objective value $100t$ can be arbitrarily large, i.e. the problem is unbounded.

In the example problem we could

- Add a lower bound on y_3 . This will directly invalidate the certificate of dual infeasibility.
- Increase the objective coefficient of y_3 . Changing the coefficients sufficiently will invalidate the inequality $c^T y^* > 0$ and thus the certificate.

6.3.4 Suggestions

Primal infeasibility

When trying to understand what causes the unexpected primal infeasible status use the following hints:

- Remove the objective function. This does not change the infeasibility status but simplifies the problem, eliminating any possibility of issues related to the objective function.
- Remove cones, semidefinite variables and integer constraints. Solve only the linear part of the problem. Typical simple modeling errors will lead to infeasibility already at this stage.
- Consider whether your problem has some obvious necessary conditions for feasibility and examine if these are satisfied, e.g. total supply should be greater than or equal to total demand.
- Verify that coefficients and bounds are reasonably sized in your problem.
- See if there are any obvious contradictions, for instance a variable is bounded both in the variables and constraints section, and the bounds are contradictory.
- Consider replacing suspicious equality constraints by inequalities. For instance, instead of $x_{12} = 200$ see what happens for $x_{12} \geq 200$ or $x_{12} \leq 200$.
- Relax bounds of the suspicious constraints or variables.

- For integer problems, remove integrality constraints on some/all variables and see if the problem solves.
- Form an **elastic model**: allow to violate constraints at a cost. Introduce slack variables and add them to the objective as penalty. For instance, suppose we have a constraint

$$\begin{aligned} & \text{minimize} && c^T x, \\ & \text{subject to} && a^T x \leq b. \end{aligned}$$

which might be causing infeasibility. Then create a new variable y and form the problem which contains:

$$\begin{aligned} & \text{minimize} && c^T x + y, \\ & \text{subject to} && a^T x \leq b + y. \end{aligned}$$

Solving this problem will reveal by how much the constraint needs to be relaxed in order to become feasible. This is equivalent to inspecting the infeasibility certificate but may be more intuitive.

- If you think you have a feasible solution or its part, fix all or some of the variables to those values. Presolve will propagate them through the model and potentially reveal more localized sources of infeasibility.
- Dump the problem in PTF or LP format and verify that the problem that was passed to the optimizer corresponds to the problem expressed in the high-level modeling language, if any such was used.

Dual infeasibility

When trying to understand what causes the unexpected dual infeasible status use the following hints:

- Verify that the objective coefficients are reasonably sized.
- Check if no bounds and constraints are missing, for example if all variables that should be nonnegative have been declared as such etc.
- Strengthen bounds of the suspicious constraints or variables.
- Form a series of models with decreasing bounds on the objective, that is, instead of objective

$$\text{minimize } c^T x$$

solve the problem with an additional constraint such as

$$c^T x = -10^5$$

and inspect the solution to figure out the mechanism behind arbitrarily decreasing objective values. This is equivalent to inspecting the infeasibility certificate but may be more intuitive.

- Dump the problem in PTF or LP format and verify that the problem that was passed to the optimizer corresponds to the problem expressed in the high-level modeling language, if any such was used.

Please note that modifying the problem to invalidate the reported certificate does *not* imply that the problem becomes feasible — the reason for infeasibility may simply *move*, resulting a problem that is still infeasible, but for a different reason. More often, the reported certificate can be used to give a hint about errors or inconsistencies in the model that produced the problem.

6.4 Python Console

The **MOSEK** Python Console is an alternative to the **MOSEK** Command Line Tool. It can be used for interactive loading, solving and debugging optimization problems stored in files, for example **MOSEK** task files. It facilitates debugging techniques described in Sec. 6.

6.4.1 Usage

The tool requires Python 3. The **MOSEK** interface for Python must be installed following the installation instructions for Python API or Python Fusion API. The easiest option is

```
pip install Mosek
```

The Python Console is contained in the file `mosekconsole.py` in the folder with **MOSEK** binaries. It can be copied to an arbitrary location. The file is also available for [download here](#) (`mosekconsole.py`).

To run the console in interactive mode use

```
python mosekconsole.py
```

To run the console in batch mode provide a semicolon-separated list of commands as the second argument of the script, for example:

```
python mosekconsole.py "read data.task.gz; solve form=dual; writesol data"
```

The script is written using the **MOSEK** Python API and can be extended by the user if more specific functionality is required. We refer to the documentation of the Python API.

6.4.2 Examples

To read a problem from `data.task.gz`, solve it, and write solutions to `data.sol`, `data.bas` or `data.itg`:

```
read data.task.gz; solve; writesol data
```

To convert between file formats:

```
read data.task.gz; write data.mps
```

To set a parameter before solving:

```
read data.task.gz; param INTPNT_CO_TOL_DFEAS 1e-9; solve"
```

To list parameter values related to the mixed-integer optimizer in the task file:

```
read data.task.gz; param MIO
```

To print a summary of problem structure:

```
read data.task.gz; anapro
```

To solve a problem forcing the dual and switching off presolve:

```
read data.task.gz; solve form=dual presolve=no
```

To write an infeasible subproblem to a file for debugging purposes:

```
read data.task.gz; solve; infsub; write inf.opf
```

6.4.3 Full list of commands

Below is a brief description of all the available commands. Detailed information about a specific command `cmd` and its options can be obtained with

```
help cmd
```

Table 6.1: List of commands of the MOSEK Python Console.

Command	Description
<code>help [command]</code>	Print list of commands or info about a specific command
<code>log filename</code>	Save the session to a file
<code>intro</code>	Print MOSEK splashscreen
<code>testlic</code>	Test the license system
<code>read filename</code>	Load problem from file
<code>reread</code>	Reload last problem file
<code>solve</code>	Solve current problem
<code>[options]</code>	
<code>write filename</code>	Write current problem to file
<code>param [name [value]]</code>	Set a parameter or get parameter values
<code>paramdef</code>	Set all parameters to default values
<code>paramdiff</code>	Show parameters with non-default values
<code>paramval name</code>	Show available values for a parameter
<code>info [name]</code>	Get an information item
<code>anapro</code>	Analyze problem data
<code>anapro+</code>	Analyze problem data with the internal analyzer
<code>hist</code>	Plot a histogram of problem data
<code>histsol</code>	Plot a histogram of the solutions
<code>spy</code>	Plot the sparsity pattern of the data matrices
<code>truncate</code>	Truncate small coefficients down to 0
<code>epsilon</code>	
<code>resobj [fac]</code>	Rescale objective by a factor
<code>anasol</code>	Analyze solutions
<code>removeitg</code>	Remove integrality constraints
<code>removecones</code>	Remove all cones and leave just the linear part
<code>delsol</code>	Remove solutions
<code>fixsol solname</code>	Fix all variables to a specific solution
<code>fixintsol</code>	Fix all integer variables to a specific solution
<code>infsub</code>	Replace current problem with its infeasible subproblem
<code>dualize</code>	Replace current problem with its dual
<code>writesol</code>	Write solution(s) to file(s) with given basename
<code>basename</code>	
<code>writejsonsol</code>	Write solutions to JSON file with given name
<code>name</code>	
<code>ptf</code>	Print the PTF representation of the problem
<code>optserver</code>	Use an OptServer to optimize
<code>[url]</code>	
<code>ls</code>	List the current folder
<code>exit</code>	Leave

Chapter 7

Problem Formulation and Solutions

In this chapter we will discuss the following topics:

- The formal, mathematical formulations of the problem types that **MOSEK** can solve and their duals.
- The solution information produced by **MOSEK**.
- The infeasibility certificate produced by **MOSEK** if the problem is infeasible.

For the underlying mathematical concepts, derivations and proofs see the [Modeling Cookbook](#) or any book on convex optimization. This chapter explains how the related data is organized specifically within the **MOSEK API**.

7.1 Linear Optimization

MOSEK accepts linear optimization problems of the form

$$\begin{array}{lll} \text{minimize} & c^T x + c^f \\ \text{subject to} & l^c \leq Ax \leq u^c, \\ & l^x \leq x \leq u^x, \end{array} \quad (7.1)$$

where

- m is the number of constraints.
- n is the number of decision variables.
- $x \in \mathbb{R}^n$ is a vector of decision variables.
- $c \in \mathbb{R}^n$ is the linear part of the objective function.
- $c^f \in \mathbb{R}$ is a constant term in the objective
- $A \in \mathbb{R}^{m \times n}$ is the constraint matrix.
- $l^c \in \mathbb{R}^m$ is the lower limit on the activity for the constraints.
- $u^c \in \mathbb{R}^m$ is the upper limit on the activity for the constraints.
- $l^x \in \mathbb{R}^n$ is the lower limit on the activity for the variables.
- $u^x \in \mathbb{R}^n$ is the upper limit on the activity for the variables.

Lower and upper bounds can be infinite, or in other words the corresponding bound may be omitted.

A primal solution (x) is *(primal) feasible* if it satisfies all constraints in (7.1). If (7.1) has at least one primal feasible solution, then (7.1) is said to be *(primal) feasible*. In case (7.1) does not have a feasible solution, the problem is said to be *(primal) infeasible*.

7.1.1 Duality for Linear Optimization

Corresponding to the primal problem (7.1), there is a dual problem

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x + c^f \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x = c, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \end{aligned} \tag{7.2}$$

where

- s_l^c are the dual variables for lower bounds of constraints,
- s_u^c are the dual variables for upper bounds of constraints,
- s_l^x are the dual variables for lower bounds of variables,
- s_u^x are the dual variables for upper bounds of variables.

If a bound in the primal problem is plus or minus infinity, the corresponding dual variable is fixed at 0, and we use the convention that the product of the bound value and the corresponding dual variable is 0. This is equivalent to removing the corresponding dual variable from the dual problem. For example:

$$l_j^x = -\infty \Rightarrow (s_l^x)_j = 0 \text{ and } l_j^x \cdot (s_l^x)_j = 0.$$

A solution

$$(y, s_l^c, s_u^c, s_l^x, s_u^x)$$

to the dual problem is feasible if it satisfies all the constraints in (7.2). If (7.2) has at least one feasible solution, then (7.2) is *(dual) feasible*, otherwise the problem is *(dual) infeasible*.

A solution

$$(x^*, y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*)$$

is denoted a *primal-dual feasible solution*, if (x^*) is a solution to the primal problem (7.1) and $(y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*)$ is a solution to the corresponding dual problem (7.2). We also define an auxiliary vector

$$(x^c)^* := Ax^*$$

containing the activities of linear constraints.

For a primal-dual feasible solution we define the *duality gap* as the difference between the primal and the dual objective value,

$$\begin{aligned} & c^T x^* + c^f - \{(l^c)^T (s_l^c)^* - (u^c)^T (s_u^c)^* + (l^x)^T (s_l^x)^* - (u^x)^T (s_u^x)^* + c^f\} \\ &= \sum_{i=0}^{m-1} [(s_l^c)_i^* ((x_i^c)^* - l_i^c) + (s_u^c)_i^* (u_i^c - (x_i^c)^*)] \\ &+ \sum_{j=0}^{n-1} [(s_l^x)_j^* (x_j - l_j^x) + (s_u^x)_j^* (u_j^x - x_j^*)] \geq 0 \end{aligned} \tag{7.3}$$

where the first relation can be obtained by transposing and multiplying the dual constraints (7.2) by x^* and $(x^c)^*$ respectively, and the second relation comes from the fact that each term in each sum is nonnegative. It follows that the primal objective will always be greater than or equal to the dual objective.

It is well-known that a linear optimization problem has an optimal solution if and only if there exist feasible primal-dual solution so that the duality gap is zero, or, equivalently, that the *complementarity conditions*

$$\begin{aligned} (s_l^c)_i^* ((x_i^c)^* - l_i^c) &= 0, \quad i = 0, \dots, m-1, \\ (s_u^c)_i^* (u_i^c - (x_i^c)^*) &= 0, \quad i = 0, \dots, m-1, \\ (s_l^x)_j^* (x_j^* - l_j^x) &= 0, \quad j = 0, \dots, n-1, \\ (s_u^x)_j^* (u_j^x - x_j^*) &= 0, \quad j = 0, \dots, n-1, \end{aligned}$$

are satisfied.

If (7.1) has an optimal solution and **MOSEK** solves the problem successfully, both the primal and dual solution are reported, including a status indicating the exact state of the solution.

7.1.2 Infeasibility for Linear Optimization

Primal Infeasible Problems

If the problem (7.1) is infeasible (has no feasible solution), **MOSEK** will report a certificate of primal infeasibility: The dual solution reported is the certificate of infeasibility, and the primal solution is undefined.

A certificate of primal infeasibility is a feasible solution to the modified dual problem

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x = 0, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \end{aligned} \tag{7.4}$$

such that the objective value is strictly positive, i.e. a solution

$$(y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*)$$

to (7.4) so that

$$(l^c)^T (s_l^c)^* - (u^c)^T (s_u^c)^* + (l^x)^T (s_l^x)^* - (u^x)^T (s_u^x)^* > 0.$$

Such a solution implies that (7.4) is unbounded, and that (7.1) is infeasible.

Dual Infeasible Problems

If the problem (7.2) is infeasible (has no feasible solution), **MOSEK** will report a certificate of dual infeasibility: The primal solution reported is the certificate of infeasibility, and the dual solution is undefined.

A certificate of dual infeasibility is a feasible solution to the modified primal problem

$$\begin{aligned} \text{minimize} \quad & c^T x \\ \text{subject to} \quad & \hat{l}_i^c \leq Ax \leq \hat{u}_i^c, \\ & \hat{l}_i^x \leq x \leq \hat{u}_i^x, \end{aligned} \tag{7.5}$$

where

$$\hat{l}_i^c = \begin{cases} 0 & \text{if } l_i^c > -\infty, \\ -\infty & \text{otherwise,} \end{cases} \quad \text{and} \quad \hat{u}_i^c := \begin{cases} 0 & \text{if } u_i^c < \infty, \\ \infty & \text{otherwise,} \end{cases}$$

and

$$\hat{l}_j^x = \begin{cases} 0 & \text{if } l_j^x > -\infty, \\ -\infty & \text{otherwise,} \end{cases} \quad \text{and} \quad \hat{u}_j^x := \begin{cases} 0 & \text{if } u_j^x < \infty, \\ \infty & \text{otherwise,} \end{cases}$$

such that

$$c^T x < 0.$$

Such a solution implies that (7.5) is unbounded, and that (7.2) is infeasible.

In case that both the primal problem (7.1) and the dual problem (7.2) are infeasible, **MOSEK** will report only one of the two possible certificates — which one is not defined (**MOSEK** returns the first certificate found).

7.1.3 Minimization vs. Maximization

When the objective sense of problem (7.1) is maximization, i.e.

$$\begin{aligned} \text{maximize} \quad & c^T x + c^f \\ \text{subject to} \quad & l^c \leq Ax \leq u^c, \\ & l^x \leq x \leq u^x, \end{aligned}$$

the objective sense of the dual problem changes to minimization, and the domain of all dual variables changes sign in comparison to (7.2). The dual problem thus takes the form

$$\begin{aligned} \text{minimize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x + c^f \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x = c, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \leq 0. \end{aligned}$$

This means that the duality gap, defined in (7.3) as the primal minus the dual objective value, becomes nonpositive. It follows that the dual objective will always be greater than or equal to the primal objective. The primal infeasibility certificate will be reported by **MOSEK** as a solution to the system

$$\begin{aligned} A^T y + s_l^x - s_u^x &= 0, \\ -y + s_l^c - s_u^c &= 0, \\ s_l^c, s_u^c, s_l^x, s_u^x &\leq 0, \end{aligned} \tag{7.6}$$

such that the objective value is strictly negative

$$(l^c)^T (s_l^c)^* - (u^c)^T (s_u^c)^* + (l^x)^T (s_l^x)^* - (u^x)^T (s_u^x)^* < 0.$$

Similarly, the certificate of dual infeasibility is an x satisfying the requirements of (7.5) such that $c^T x > 0$.

7.2 Conic Optimization

Conic optimization is an extension of linear optimization (see Sec. 7.1) allowing conic domains to be specified for affine expressions. A conic optimization problem to be solved by **MOSEK** can be written as

$$\begin{aligned} \text{minimize} \quad & c^T x + c^f \\ \text{subject to} \quad & l^c \leq Ax \leq u^c, \\ & l^x \leq x \leq u^x, \\ & Fx + g \in \mathcal{D}, \end{aligned} \tag{7.7}$$

where

- m is the number of constraints.
- n is the number of decision variables.
- $x \in \mathbb{R}^n$ is a vector of decision variables.
- $c \in \mathbb{R}^n$ is the linear part of the objective function.
- $c^f \in \mathbb{R}$ is a constant term in the objective
- $A \in \mathbb{R}^{m \times n}$ is the constraint matrix.
- $l^c \in \mathbb{R}^m$ is the lower limit on the activity for the constraints.
- $u^c \in \mathbb{R}^m$ is the upper limit on the activity for the constraints.
- $l^x \in \mathbb{R}^n$ is the lower limit on the activity for the variables.
- $u^x \in \mathbb{R}^n$ is the upper limit on the activity for the variables.

is the same as in Sec. 7.1 and moreover:

- $F \in \mathbb{R}^{k \times n}$ is the affine conic constraint matrix.,
- $g \in \mathbb{R}^k$ is the affine conic constraint constant term vector.,
- \mathcal{D} is a Cartesian product of conic domains, namely $\mathcal{D} = \mathcal{D}_1 \times \dots \times \mathcal{D}_p$, where p is the number of individual affine conic constraints (ACCs), and each domain is one from Sec. 10.5.

The total dimension of the domain \mathcal{D} must be equal to k , the number of rows in F and g . Lower and upper bounds can be infinite, or in other words the corresponding bound may be omitted.

MOSEK supports also the cone of positive semidefinite matrices. In order not to obscure this section with additional notation, that extension is discussed in Sec. 7.3.

7.2.1 Duality for Conic Optimization

Corresponding to the primal problem (7.7), there is a dual problem

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x - g^T \dot{y} + c^f \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x + F^T \dot{y} = c, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \\ & \dot{y} \in \mathcal{D}^*, \end{aligned} \tag{7.8}$$

where

- s_l^c are the dual variables for lower bounds of constraints,
- s_u^c are the dual variables for upper bounds of constraints,
- s_l^x are the dual variables for lower bounds of variables,
- s_u^x are the dual variables for upper bounds of variables,
- \dot{y} are the dual variables for affine conic constraints,
- the dual domain $\mathcal{D}^* = \mathcal{D}_1^* \times \cdots \times \mathcal{D}_p^*$ is a Cartesian product of cones dual to \mathcal{D}_i .

One can check that the dual problem of the dual problem is identical to the original primal problem.

If a bound in the primal problem is plus or minus infinity, the corresponding dual variable is fixed at 0, and we use the convention that the product of the bound value and the corresponding dual variable is 0. This is equivalent to removing the corresponding dual variable $(s_l^x)_j$ from the dual problem. For example:

$$l_j^x = -\infty \Rightarrow (s_l^x)_j = 0 \text{ and } l_j^x \cdot (s_l^x)_j = 0.$$

A solution

$$(y, s_l^c, s_u^c, s_l^x, s_u^x, \dot{y})$$

to the dual problem is feasible if it satisfies all the constraints in (7.8). If (7.8) has at least one feasible solution, then (7.8) is *(dual) feasible*, otherwise the problem is *(dual) infeasible*.

A solution

$$(x^*, y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*, (\dot{y})^*)$$

is denoted a *primal-dual feasible solution*, if (x^*) is a solution to the primal problem (7.7) and $(y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*, (\dot{y})^*)$ is a solution to the corresponding dual problem (7.8). We also define an auxiliary vector

$$(x^c)^* := Ax^*$$

containing the activities of linear constraints.

For a primal-dual feasible solution we define the *duality gap* as the difference between the primal and the dual objective value,

$$\begin{aligned} & c^T x^* + c^f - \{(l^c)^T (s_l^c)^* - (u^c)^T (s_u^c)^* + (l^x)^T (s_l^x)^* - (u^x)^T (s_u^x)^* - g^T (\dot{y})^* + c^f\} \\ &= \sum_{i=0}^{m-1} [(s_l^c)_i^* ((x_i^c)^* - l_i^c) + (s_u^c)_i^* (u_i^c - (x_i^c)^*)] \\ &+ \sum_{j=0}^{n-1} [(s_l^x)_j^* (x_j - l_j^x) + (s_u^x)_j^* (u_j^x - x_j^*)] \\ &+ ((\dot{y})^*)^T (F x^* + g) \geq 0 \end{aligned} \tag{7.9}$$

where the first relation can be obtained by transposing and multiplying the dual constraints (7.2) by x^* and $(x^c)^*$ respectively, and the second relation comes from the fact that each term in each sum is nonnegative. It follows that the primal objective will always be greater than or equal to the dual objective.

It is well-known that, under some non-degeneracy assumptions that exclude ill-posed cases, a conic optimization problem has an optimal solution if and only if there exist feasible primal-dual solution so that the duality gap is zero, or, equivalently, that the *complementarity conditions*

$$\begin{aligned} (s_l^c)_i^*((x_i^c)^* - l_i^c) &= 0, \quad i = 0, \dots, m-1, \\ (s_u^c)_i^*(u_i^c - (x_i^c)^*) &= 0, \quad i = 0, \dots, m-1, \\ (s_l^x)_j^*(x_j^* - l_j^x) &= 0, \quad j = 0, \dots, n-1, \\ (s_u^x)_j^*(u_j^x - x_j^*) &= 0, \quad j = 0, \dots, n-1, \\ ((\dot{y})^*)^T(Fx^* + g) &= 0, \end{aligned} \tag{7.10}$$

are satisfied.

If (7.7) has an optimal solution and **MOSEK** solves the problem successfully, both the primal and dual solution are reported, including a status indicating the exact state of the solution.

7.2.2 Infeasibility for Conic Optimization

Primal Infeasible Problems

If the problem (7.7) is infeasible (has no feasible solution), **MOSEK** will report a certificate of primal infeasibility: The dual solution reported is the certificate of infeasibility, and the primal solution is undefined.

A certificate of primal infeasibility is a feasible solution to the modified dual problem

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x - g^T \dot{y} \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x + F^T \dot{y} = 0, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \\ & \dot{y} \in \mathcal{D}^*, \end{aligned} \tag{7.11}$$

such that the objective value is strictly positive, i.e. a solution

$$(y^*, (s_l^c)^*, (s_u^c)^*, (s_l^x)^*, (s_u^x)^*, (\dot{y})^*)$$

to (7.11) so that

$$(l^c)^T(s_l^c)^* - (u^c)^T(s_u^c)^* + (l^x)^T(s_l^x)^* - (u^x)^T(s_u^x)^* - g^T \dot{y} > 0.$$

Such a solution implies that (7.11) is unbounded, and that (7.7) is infeasible.

Dual Infeasible Problems

If the problem (7.8) is infeasible (has no feasible solution), **MOSEK** will report a certificate of dual infeasibility: The primal solution reported is the certificate of infeasibility, and the dual solution is undefined.

A certificate of dual infeasibility is a feasible solution to the modified primal problem

$$\begin{aligned} \text{minimize} \quad & c^T x \\ \text{subject to} \quad & \hat{l}_i^c \leq Ax \leq \hat{u}_i^c, \\ & \hat{l}_i^x \leq x \leq \hat{u}_i^x, \\ & Fx \in \mathcal{D} \end{aligned} \tag{7.12}$$

where

$$\hat{l}_i^c = \begin{cases} 0 & \text{if } l_i^c > -\infty, \\ -\infty & \text{otherwise,} \end{cases} \quad \text{and} \quad \hat{u}_i^c := \begin{cases} 0 & \text{if } u_i^c < \infty, \\ \infty & \text{otherwise,} \end{cases} \tag{7.13}$$

and

$$\hat{l}_j^x = \begin{cases} 0 & \text{if } l_j^x > -\infty, \\ -\infty & \text{otherwise,} \end{cases} \quad \text{and} \quad \hat{u}_j^x := \begin{cases} 0 & \text{if } u_j^x < \infty, \\ \infty & \text{otherwise,} \end{cases} \tag{7.14}$$

such that

$$c^T x < 0.$$

Such a solution implies that (7.12) is unbounded, and that (7.8) is infeasible.

In case that both the primal problem (7.7) and the dual problem (7.8) are infeasible, **MOSEK** will report only one of the two possible certificates — which one is not defined (**MOSEK** returns the first certificate found).

7.2.3 Minimalization vs. Maximalization

When the objective sense of problem (7.7) is maximization, i.e.

$$\begin{aligned} & \text{maximize} && c^T x + c^f \\ & \text{subject to} && l^c \leq Ax \leq u^c, \\ & && l^x \leq x \leq u^x, \\ & && Fx + g \in \mathcal{D}, \end{aligned}$$

the objective sense of the dual problem changes to minimization, and the domain of all dual variables changes sign in comparison to (7.2). The dual problem thus takes the form

$$\begin{aligned} & \text{minimize} && (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x - g^T \dot{y} + c^f \\ & \text{subject to} && A^T y + s_l^x - s_u^x + F^T \dot{y} = c, \\ & && -y + s_l^c - s_u^c = 0, \\ & && s_l^c, s_u^c, s_l^x, s_u^x \leq 0, \\ & && -\dot{y} \in \mathcal{D}^* \end{aligned}$$

This means that the duality gap, defined in (7.9) as the primal minus the dual objective value, becomes nonpositive. It follows that the dual objective will always be greater than or equal to the primal objective. The primal infeasibility certificate will be reported by **MOSEK** as a solution to the system

$$\begin{aligned} & A^T y + s_l^x - s_u^x + F^T \dot{y} = 0, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \leq 0, \\ & -\dot{y} \in \mathcal{D}^* \end{aligned} \tag{7.15}$$

such that the objective value is strictly negative

$$(l^c)^T (s_l^c)^* - (u^c)^T (s_u^c)^* + (l^x)^T (s_l^x)^* - (u^x)^T (s_u^x)^* - g^T \dot{y} < 0.$$

Similarly, the certificate of dual infeasibility is an x satisfying the requirements of (7.12) such that $c^T x > 0$.

7.3 Semidefinite Optimization

Semidefinite optimization is an extension of conic optimization (see Sec. 7.2) allowing positive semidefinite matrix variables to be used in addition to the usual scalar variables. All the other parts of the input are defined exactly as in Sec. 7.2, and the discussion from that section applies verbatim to all properties of problems with semidefinite variables. We only briefly indicate how the corresponding formulae should be modified with semidefinite terms.

A semidefinite optimization problem can be written as

$$\begin{aligned} & \text{minimize} && c^T x + \langle \bar{C}, \bar{X} \rangle + c^f \\ & \text{subject to} && l^c \leq Ax + \langle \bar{A}, \bar{X} \rangle \leq u^c, \\ & && l^x \leq x \leq u^x, \\ & && Fx + \langle \bar{F}, \bar{X} \rangle + g \in \mathcal{D}, \\ & && \bar{X}_j \in \mathcal{S}_+^{r_j}, j = 1, \dots, s \end{aligned}$$

where

- m is the number of constraints.
- n is the number of decision variables.
- $x \in \mathbb{R}^n$ is a vector of decision variables.
- $c \in \mathbb{R}^n$ is the linear part of the objective function.
- $c^f \in \mathbb{R}$ is a constant term in the objective
- $A \in \mathbb{R}^{m \times n}$ is the constraint matrix.
- $l^c \in \mathbb{R}^m$ is the lower limit on the activity for the constraints.
- $u^c \in \mathbb{R}^m$ is the upper limit on the activity for the constraints.
- $l^x \in \mathbb{R}^n$ is the lower limit on the activity for the variables.
- $u^x \in \mathbb{R}^n$ is the upper limit on the activity for the variables.
- $F \in \mathbb{R}^{k \times n}$ is the affine conic constraint matrix.,
- $g \in \mathbb{R}^k$ is the affine conic constraint constant term vector.,
- \mathcal{D} is a Cartesian product of conic domains, namely $\mathcal{D} = \mathcal{D}_1 \times \cdots \times \mathcal{D}_p$, where p is the number of individual affine conic constraints (ACCs), and each domain is one from Sec. 10.5.

is the same as in Sec. 7.2 and moreover:

- there are s symmetric positive semidefinite variables, the j -th of which is $\bar{X}_j \in \mathcal{S}_+^{r_j}$ of dimension r_j ,
- $\bar{C} = (\bar{C}_j)_{j=1,\dots,s}$ is a collection of symmetric coefficient matrices in the objective, with $\bar{C}_j \in \mathcal{S}^{r_j}$, and we interpret the notation $\langle \bar{C}, \bar{X} \rangle$ as a shorthand for

$$\langle \bar{C}, \bar{X} \rangle := \sum_{j=1}^s \langle \bar{C}_j, \bar{X}_j \rangle.$$

- $\bar{A} = (\bar{A}_{ij})_{i=1,\dots,m, j=1,\dots,s}$ is a collection of symmetric coefficient matrices in the constraints, with $\bar{A}_{ij} \in \mathcal{S}^{r_j}$, and we interpret the notation $\langle \bar{A}, \bar{X} \rangle$ as a shorthand for the vector

$$\langle \bar{A}, \bar{X} \rangle := \left(\sum_{j=1}^s \langle \bar{A}_{ij}, \bar{X}_j \rangle \right)_{i=1,\dots,m}.$$

- $\bar{F} = (\bar{F}_{ij})_{i=1,\dots,k, j=1,\dots,s}$ is a collection of symmetric coefficient matrices in the affine conic constraints, with $\bar{F}_{ij} \in \mathcal{S}^{r_j}$, and we interpret the notation $\langle \bar{F}, \bar{X} \rangle$ as a shorthand for the vector

$$\langle \bar{F}, \bar{X} \rangle := \left(\sum_{j=1}^s \langle \bar{F}_{ij}, \bar{X}_j \rangle \right)_{i=1,\dots,k}.$$

In each case the matrix inner product between symmetric matrices of the same dimension r is defined as

$$\langle U, V \rangle := \sum_{i=1}^r \sum_{j=1}^r U_{ij} V_{ij}.$$

To summarize, above the formulation extends that from Sec. 7.2 by the possibility of including semidefinite terms in the objective, constraints and affine conic constraints.

Duality

The definition of the dual problem (7.8) becomes:

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x - g^T \dot{y} + c^f \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x + F^T \dot{y} = c, \\ & -y + s_l^c - s_u^c = 0, \\ & \bar{C}_j - \sum_{i=1}^m y_i \bar{A}_{ij} - \sum_{i=1}^k \dot{y}_i \bar{F}_{ij} = S_j, \quad j = 1, \dots, s, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \\ & \dot{y} \in \mathcal{D}^*, \\ & \bar{S}_j \in \mathcal{S}_+^{r_j}, \quad j = 1, \dots, s. \end{aligned} \tag{7.16}$$

Complementarity conditions (7.10) include the additional relation:

$$\langle \bar{X}_j, \bar{S}_j \rangle = 0 \quad j = 1, \dots, s. \tag{7.17}$$

Infeasibility

A certificate of primal infeasibility (7.11) is now a feasible solution to:

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x - g^T \dot{y} \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x + F^T \dot{y} = 0, \\ & -y + s_l^c - s_u^c = 0, \\ & -\sum_{i=1}^m y_i \bar{A}_{ij} - \sum_{i=1}^k \dot{y}_i \bar{F}_{ij} = S_j, \quad j = 1, \dots, s, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0, \\ & \dot{y} \in \mathcal{D}^*, \\ & \bar{S}_j \in \mathcal{S}_+^{r_j}, \quad j = 1, \dots, s. \end{aligned} \tag{7.18}$$

such that the objective value is strictly positive.

Similarly, a dual infeasibility certificate (7.12) is a feasible solution to

$$\begin{aligned} \text{minimize} \quad & c^T x + \langle \bar{C}, \bar{X} \rangle \\ \text{subject to} \quad & \hat{l}^c \leq Ax + \langle \bar{A}, \bar{X} \rangle \leq \hat{u}^c, \\ & \hat{l}^x \leq x \leq \hat{u}^x, \\ & Fx + \langle \bar{F}, \bar{X} \rangle \in \mathcal{D}, \\ & \bar{X}_j \in \mathcal{S}_+^{r_j}, j = 1, \dots, s \end{aligned} \tag{7.19}$$

where the modified bounds are as in (7.13) and (7.14) and the objective value is strictly negative.

7.4 Quadratic and Quadratically Constrained Optimization

A convex quadratic and quadratically constrained optimization problem has the form

$$\begin{aligned} \text{minimize} \quad & \frac{1}{2} x^T Q^o x + c^T x + c^f \\ \text{subject to} \quad & l_k^c \leq \frac{1}{2} x^T Q^k x + \sum_{j=0}^{n-1} a_{kj} x_j \leq u_k^c, \quad k = 0, \dots, m-1, \\ & l_j^x \leq x_j \leq u_j^x, \quad j = 0, \dots, n-1, \end{aligned} \tag{7.20}$$

where all variables and bounds have the same meaning as for linear problems (see Sec. 7.1) and Q^o and all Q^k are symmetric matrices. Moreover, for convexity, Q^o must be a positive semidefinite matrix and Q^k must satisfy

$$\begin{aligned} -\infty < l_k^c & \Rightarrow Q^k \text{ is negative semidefinite,} \\ u_k^c < \infty & \Rightarrow Q^k \text{ is positive semidefinite,} \\ -\infty < l_k^c \leq u_k^c & \Rightarrow Q^k = 0. \end{aligned}$$

The convexity requirement is very important and **MOSEK** checks whether it is fulfilled.

7.4.1 A Recommendation

Any convex quadratic optimization problem can be reformulated as a conic quadratic optimization problem, see [Modeling Cookbook](#) and [\[And13\]](#). In fact **MOSEK** does such conversion internally as a part of the solution process for the following reasons:

- the conic optimizer is numerically more robust than the one for quadratic problems.
- the conic optimizer is usually faster because quadratic cones are simpler than quadratic functions, even though the conic reformulation usually has more constraints and variables than the original quadratic formulation.
- it is easy to dualize the conic formulation if deemed worthwhile potentially leading to (huge) computational savings.

However, instead of relying on the automatic reformulation we recommend to formulate the problem as a conic problem from scratch because:

- it saves the computational overhead of the reformulation including the convexity check. A conic problem is convex by construction and hence no convexity check is needed for conic problems.
- usually the modeler can do a better reformulation than the automatic method because the modeler can exploit the knowledge of the problem at hand.

To summarize we recommend to formulate quadratic problems and in particular quadratically constrained problems directly in conic form.

7.4.2 Duality for Quadratic and Quadratically Constrained Optimization

The dual problem corresponding to the quadratic and quadratically constrained optimization problem (7.20) is given by

$$\begin{aligned} \text{maximize} \quad & (l^c)^T s_l^c - (u^c)^T s_u^c + (l^x)^T s_l^x - (u^x)^T s_u^x + \frac{1}{2} x^T \left\{ \sum_{k=0}^{m-1} y_k Q^k - Q^o \right\} x + c^f \\ \text{subject to} \quad & A^T y + s_l^x - s_u^x + \left\{ \sum_{k=0}^{m-1} y_k Q^k - Q^o \right\} x = c, \\ & -y + s_l^c - s_u^c = 0, \\ & s_l^c, s_u^c, s_l^x, s_u^x \geq 0. \end{aligned} \quad (7.21)$$

The dual problem is related to the dual problem for linear optimization (see [Sec. 7.1.1](#)), but depends on the variable x which in general can not be eliminated. In the solutions reported by **MOSEK**, the value of x is the same for the primal problem (7.20) and the dual problem (7.21).

7.4.3 Infeasibility for Quadratic Optimization

In case **MOSEK** finds a problem to be infeasible it reports a certificate of infeasibility. We write them out explicitly for quadratic problems, that is when $Q^k = 0$ for all k and quadratic terms appear only in the objective Q^o . In this case the constraints both in the primal and dual problem are linear, and **MOSEK** produces for them the same infeasibility certificate as for linear problems.

The certificate of primal infeasibility is a solution to the problem (7.4) such that the objective value is strictly positive.

The certificate of dual infeasibility is a solution to the problem (7.5) together with an additional constraint

$$Q^o x = 0$$

such that the objective value is strictly negative.

Below is an outline of the different problem types for quick reference.

Continuous problem formulations

- **Linear optimization (LO)**

$$\begin{aligned} & \text{minimize} && c^T x + c^f \\ \text{subject to} & l^c \leq Ax \leq u^c, \\ & l^x \leq x \leq u^x. \end{aligned}$$

- **Conic optimization (CO)**

Conic optimization extends linear optimization with *affine conic constraints* (ACC):

$$\begin{aligned} & \text{minimize} && c^T x + c^f \\ \text{subject to} & l^c \leq Ax \leq u^c, \\ & l^x \leq x \leq u^x, \\ & Fx + g \in \mathcal{D}, \end{aligned}$$

where \mathcal{D} is a product of domains from Sec. 10.5.

- **Semidefinite optimization (SDO)**

A conic optimization problem can be further extended with *semidefinite variables*:

$$\begin{aligned} & \text{minimize} && c^T x + \langle \bar{C}, \bar{X} \rangle + c^f \\ \text{subject to} & l^c \leq Ax + \langle \bar{A}, \bar{X} \rangle \leq u^c, \\ & l^x \leq x \leq u^x, \\ & Fx + \langle \bar{F}, \bar{X} \rangle + g \in \mathcal{D}, \\ & \bar{X} \in \mathcal{S}_+, \end{aligned}$$

where \mathcal{D} is a product of domains from Sec. 10.5 and \mathcal{S}_+ is a product of PSD cones meaning that \bar{X} is a sequence of PSD matrix variables.

- **Quadratic and quadratically constrained optimization (QO, QCQO)**

A quadratic problem or quadratically constrained problem has the form

$$\begin{aligned} & \text{minimize} && \frac{1}{2} x^T Q^o x + c^T x + c^f \\ \text{subject to} & l^c \leq \frac{1}{2} x^T Q^c x + Ax \leq u^c, \\ & l^x \leq x \leq u^x. \end{aligned}$$

Mixed-integer extensions

Continuous problems can be extended with constraints requiring the mixed-integer optimizer. We outline them briefly here. The continuous part of a mixed-integer problem is formulated according to one of the continuous types above, however only the primal information and solution fields are relevant, there are no dual values and no infeasibility certificates.

- **Integer variables.** Specifies that a subset of variables take integer values, that is

$$x_I \in \mathbb{Z}$$

for some index set I .

Chapter 8

Optimizers

The most essential part of **MOSEK** are the optimizers:

- *primal simplex* (linear problems),
- *dual simplex* (linear problems),
- *interior-point* (linear, quadratic and conic problems),
- *mixed-integer* (problems with integer variables).

The structure of a successful optimization process is roughly:

- **Presolve**

1. *Elimination*: Reduce the size of the problem.
2. *Dualizer*: Choose whether to solve the primal or the dual form of the problem.
3. *Scaling*: Scale the problem for better numerical stability.

- **Optimization**

1. *Optimize*: Solve the problem using selected method.
2. *Terminate*: Stop the optimization when specific termination criteria have been met.
3. *Report*: Return the solution or an infeasibility certificate.

The preprocessing stage is transparent to the user, but useful to know about for tuning purposes. The purpose of the preprocessing steps is to make the actual optimization more efficient and robust. We discuss the details of the above steps in the following sections.

8.1 Presolve

Before an optimizer actually performs the optimization the problem is preprocessed using the so-called presolve. The purpose of the presolve is to

1. remove redundant constraints,
2. eliminate fixed variables,
3. remove linear dependencies,
4. substitute out (implied) free variables, and
5. reduce the size of the optimization problem in general.

After the presolved problem has been optimized the solution is automatically postsolved so that the returned solution is valid for the original problem. Hence, the presolve is completely transparent. For further details about the presolve phase, please see [AA95] and [AGMeszarosX96].

It is possible to fine-tune the behavior of the presolve or to turn it off entirely. If presolve consumes too much time or memory compared to the reduction in problem size gained it may be disabled. This is done by setting the parameter `MSK_IPAR_PRESOLVE_USE` to `MSK_PRESOLVE_MODE_OFF`.

In the following we describe in more detail the presolve applied to continuous, i.e., linear and conic optimization problems, see Sec. 8.2 and Sec. 8.3. The mixed-integer optimizer, Sec. 8.4, applies similar techniques. The two most time-consuming steps of the presolve for continuous optimization problems are

- the eliminator, and
- the linear dependency check.

Therefore, in some cases it is worthwhile to disable one or both of these.

Numerical issues in the presolve

During the presolve the problem is reformulated so that it hopefully solves faster. However, in rare cases the presolved problem may be harder to solve than the original problem. The presolve may also be infeasible although the original problem is not. If it is suspected that presolved problem is much harder to solve than the original, we suggest to first turn the eliminator off by setting the parameter `MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_NUM_TRIES` to 0. If that does not help, then trying to turn entire presolve off may help.

Since all computations are done in finite precision, the presolve employs some tolerances when concluding a variable is fixed or a constraint is redundant. If it happens that **MOSEK** incorrectly concludes a problem is primal or dual infeasible, then it is worthwhile to try to reduce the parameters `MSK_DPAR_PRESOLVE_TOL_X` and `MSK_DPAR_PRESOLVE_TOL_S`. However, if reducing the parameters actually helps then this should be taken as an indication that the problem is badly formulated.

Eliminator

The purpose of the eliminator is to eliminate free and implied free variables from the problem using substitution. For instance, given the constraints

$$\begin{aligned} y &= \sum_j x_j, \\ y, x &\geq 0, \end{aligned}$$

y is an implied free variable that can be substituted out of the problem, if deemed worthwhile. If the eliminator consumes too much time or memory compared to the reduction in problem size gained it may be disabled. This can be done by setting the parameter `MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_NUM_TRIES` to 0. In rare cases the eliminator may cause that the problem becomes much hard to solve.

Linear dependency checker

The purpose of the linear dependency check is to remove linear dependencies among the linear equalities. For instance, the three linear equalities

$$\begin{aligned} x_1 + x_2 + x_3 &= 1, \\ x_1 + 0.5x_2 &= 0.5, \\ 0.5x_2 + x_3 &= 0.5. \end{aligned}$$

contain exactly one linear dependency. This implies that one of the constraints can be dropped without changing the set of feasible solutions. Removing linear dependencies is in general a good idea since it reduces the size of the problem. Moreover, the linear dependencies are likely to introduce numerical problems in the optimization phase. It is best practice to build models without linear dependencies, but that is not always easy for the user to control. If the linear dependencies are removed at the modeling stage, the linear dependency check can safely be disabled by setting the parameter `MSK_IPAR_PRESOLVE_LINDEP_USE` to `MSK_OFF`.

Dualizer

All linear, conic, and convex optimization problems have an equivalent dual problem associated with them. **MOSEK** has built-in heuristics to determine if it is more efficient to solve the primal or dual problem. The form (primal or dual) is displayed in the **MOSEK** log and available as an information item from the solver. Should the internal heuristics not choose the most efficient form of the problem it may be worthwhile to set the dualizer manually by setting the parameters:

- `MSK_IPAR_INTPNT_SOLVE_FORM`: In case of the interior-point optimizer.
- `MSK_IPAR_SIM_SOLVE_FORM`: In case of the simplex optimizer.

Note that currently only linear and conic (but not semidefinite) problems may be automatically dualized.

Scaling

Problems containing data with large and/or small coefficients, say $1.0e + 9$ or $1.0e - 7$, are often hard to solve. Significant digits may be truncated in calculations with finite precision, which can result in the optimizer relying on inaccurate data. Since computers work in finite precision, extreme coefficients should be avoided. In general, data around the same *order of magnitude* is preferred, and we will refer to a problem, satisfying this loose property, as being *well-scaled*. If the problem is not well scaled, **MOSEK** will try to scale (multiply) constraints and variables by suitable constants. **MOSEK** solves the scaled problem to improve the numerical properties.

The scaling process is transparent, i.e. the solution to the original problem is reported. It is important to be aware that the optimizer terminates when the termination criterion is met on the scaled problem, therefore significant primal or dual infeasibilities may occur after unscaling for badly scaled problems. The best solution of this issue is to reformulate the problem, making it better scaled.

By default **MOSEK** heuristically chooses a suitable scaling. The scaling for interior-point and simplex optimizers can be controlled with the parameters `MSK_IPAR_INTPNT_SCALING` and `MSK_IPAR_SIM_SCALING` respectively.

8.2 Linear Optimization

8.2.1 Optimizer Selection

Two different types of optimizers are available for linear problems: The default is an interior-point method, and the alternative is the simplex method (primal or dual). The optimizer can be selected using the parameter `MSK_IPAR_OPTIMIZER`.

The Interior-point or the Simplex Optimizer?

Given a linear optimization problem, which optimizer is the best: the simplex or the interior-point optimizer? It is impossible to provide a general answer to this question. However, the interior-point optimizer behaves more predictably: it tends to use between 20 and 100 iterations, almost independently of problem size, but cannot perform warm-start. On the other hand the simplex method can take advantage of an initial solution, but is less predictable from cold-start. The interior-point optimizer is used by default.

The Primal or the Dual Simplex Variant?

MOSEK provides both a primal and a dual simplex optimizer. Predicting which simplex optimizer is faster is impossible, however, in recent years the dual optimizer has seen several algorithmic and computational improvements, which, in our experience, make it faster on average than the primal version. Still, it depends much on the problem structure and size. Setting the `MSK_IPAR_OPTIMIZER` parameter to `MSK_OPTIMIZER_FREE_SIMPLEX` instructs **MOSEK** to choose one of the simplex variants automatically.

To summarize, if you want to know which optimizer is faster for a given problem type, it is best to try all the options.

8.2.2 The Interior-point Optimizer

The purpose of this section is to provide information about the algorithm employed in the **MOSEK** interior-point optimizer for linear problems and about its termination criteria.

The homogeneous primal-dual problem

In order to keep the discussion simple it is assumed that **MOSEK** solves linear optimization problems of standard form

$$\begin{aligned} & \text{minimize} && c^T x \\ & \text{subject to} && Ax = b, \\ & && x \geq 0. \end{aligned} \tag{8.1}$$

This is in fact what happens inside **MOSEK**; for efficiency reasons **MOSEK** converts the problem to standard form before solving, then converts it back to the input form when reporting the solution.

Since it is not known beforehand whether problem (8.1) has an optimal solution, is primal infeasible or is dual infeasible, the optimization algorithm must deal with all three situations. This is the reason why **MOSEK** solves the so-called homogeneous model

$$\begin{aligned} Ax - b\tau &= 0, \\ A^T y + s - c\tau &= 0, \\ -c^T x + b^T y - \kappa &= 0, \\ x, s, \tau, \kappa &\geq 0, \end{aligned} \tag{8.2}$$

where y and s correspond to the dual variables in (8.1), and τ and κ are two additional scalar variables. Note that the homogeneous model (8.2) always has solution since

$$(x, y, s, \tau, \kappa) = (0, 0, 0, 0, 0)$$

is a solution, although not a very interesting one. Any solution

$$(x^*, y^*, s^*, \tau^*, \kappa^*)$$

to the homogeneous model (8.2) satisfies

$$x_j^* s_j^* = 0 \text{ and } \tau^* \kappa^* = 0.$$

Moreover, there is always a solution that has the property $\tau^* + \kappa^* > 0$.

First, assume that $\tau^* > 0$. It follows that

$$\begin{aligned} A \frac{x^*}{\tau^*} &= b, \\ A^T \frac{y^*}{\tau^*} + \frac{s^*}{\tau^*} &= c, \\ -c^T \frac{x^*}{\tau^*} + b^T \frac{y^*}{\tau^*} &= 0, \\ x^*, s^*, \tau^*, \kappa^* &\geq 0. \end{aligned}$$

This shows that $\frac{x^*}{\tau^*}$ is a primal optimal solution and $(\frac{y^*}{\tau^*}, \frac{s^*}{\tau^*})$ is a dual optimal solution; this is reported as the optimal interior-point solution since

$$(x, y, s) = \left\{ \frac{x^*}{\tau^*}, \frac{y^*}{\tau^*}, \frac{s^*}{\tau^*} \right\}$$

is a primal-dual optimal solution (see Sec. 7.1 for the mathematical background on duality and optimality).

On other hand, if $\kappa^* > 0$ then

$$\begin{aligned} Ax^* &= 0, \\ A^T y^* + s^* &= 0, \\ -c^T x^* + b^T y^* &= \kappa^*, \\ x^*, s^*, \tau^*, \kappa^* &\geq 0. \end{aligned}$$

This implies that at least one of

$$c^T x^* < 0 \quad (8.3)$$

or

$$b^T y^* > 0 \quad (8.4)$$

is satisfied. If (8.3) is satisfied then x^* is a certificate of dual infeasibility, whereas if (8.4) is satisfied then y^* is a certificate of primal infeasibility.

In summary, by computing an appropriate solution to the homogeneous model, all information required for a solution to the original problem is obtained. A solution to the homogeneous model can be computed using a primal-dual interior-point algorithm [And09].

Interior-point Termination Criterion

For efficiency reasons it is not practical to solve the homogeneous model exactly. Hence, an exact optimal solution or an exact infeasibility certificate cannot be computed and a reasonable termination criterion has to be employed.

In the k -th iteration of the interior-point algorithm a trial solution

$$(x^k, y^k, s^k, \tau^k, \kappa^k)$$

to homogeneous model is generated, where

$$x^k, s^k, \tau^k, \kappa^k > 0.$$

Optimal case

Whenever the trial solution satisfies the criterion

$$\begin{aligned} \left\| A \frac{x^k}{\tau^k} - b \right\|_\infty &\leq \epsilon_p (1 + \|b\|_\infty), \\ \left\| A^T \frac{y^k}{\tau^k} + \frac{s^k}{\tau^k} - c \right\|_\infty &\leq \epsilon_d (1 + \|c\|_\infty), \text{ and} \\ \min \left(\frac{(x^k)^T s^k}{(\tau^k)^2}, \left| \frac{c^T x^k}{\tau^k} - \frac{b^T y^k}{\tau^k} \right| \right) &\leq \epsilon_g \max \left(1, \frac{\min(|c^T x^k|, |b^T y^k|)}{\tau^k} \right), \end{aligned} \quad (8.5)$$

the interior-point optimizer is terminated and

$$\frac{(x^k, y^k, s^k)}{\tau^k}$$

is reported as the primal-dual optimal solution. The interpretation of (8.5) is that the optimizer is terminated if

- $\frac{x^k}{\tau^k}$ is approximately primal feasible,
- $\left\{ \frac{y^k}{\tau^k}, \frac{s^k}{\tau^k} \right\}$ is approximately dual feasible, and
- the duality gap is almost zero.

Dual infeasibility certificate

On the other hand, if the trial solution satisfies

$$-\epsilon_i c^T x^k > \frac{\|c\|_\infty}{\max(1, \|b\|_\infty)} \|Ax^k\|_\infty$$

then the problem is declared dual infeasible and x^k is reported as a certificate of dual infeasibility. The motivation for this stopping criterion is as follows: First assume that $\|Ax^k\|_\infty = 0$; then x^k is an exact certificate of dual infeasibility. Next assume that this is not the case, i.e.

$$\|Ax^k\|_\infty > 0,$$

and define

$$\bar{x} := \epsilon_i \frac{\max(1, \|b\|_\infty)}{\|Ax^k\|_\infty \|c\|_\infty} x^k.$$

It is easy to verify that

$$\|A\bar{x}\|_\infty = \epsilon_i \frac{\max(1, \|b\|_\infty)}{\|c\|_\infty} \text{ and } -c^T \bar{x} > 1,$$

which shows \bar{x} is an approximate certificate of dual infeasibility, where ϵ_i controls the quality of the approximation. A smaller value means a better approximation.

Primal infeasibility certificate

Finally, if

$$\epsilon_i b^T y^k > \frac{\|b\|_\infty}{\max(1, \|c\|_\infty)} \|A^T y^k + s^k\|_\infty$$

then y^k is reported as a certificate of primal infeasibility.

Adjusting optimality criteria

It is possible to adjust the tolerances ϵ_p , ϵ_d , ϵ_g and ϵ_i using parameters; see table for details.

Table 8.1: Parameters employed in termination criterion

Tolerance	Parameter	name
ϵ_p		<code>MSK_DPAR_INTPNT_TOL_PFEAS</code>
ϵ_d		<code>MSK_DPAR_INTPNT_TOL_DFEAS</code>
ϵ_g		<code>MSK_DPAR_INTPNT_TOL_REL_GAP</code>
ϵ_i		<code>MSK_DPAR_INTPNT_TOL_INFEAS</code>

The default values of the termination tolerances are chosen such that for a majority of problems appearing in practice it is not possible to achieve much better accuracy. Therefore, tightening the tolerances usually is not worthwhile. However, an inspection of (8.5) reveals that the quality of the solution depends on $\|b\|_\infty$ and $\|c\|_\infty$; the smaller the norms are, the better the solution accuracy.

The interior-point method as implemented by **MOSEK** will converge toward optimality and primal and dual feasibility at the same rate [And09]. This means that if the optimizer is stopped prematurely then it is very unlikely that either the primal or dual solution is feasible. Another consequence is that in most cases all the tolerances, ϵ_p , ϵ_d , ϵ_g and ϵ_i , have to be relaxed together to achieve an effect.

The basis identification discussed in Sec. 8.2.2 requires an optimal solution to work well; hence basis identification should be turned off if the termination criterion is relaxed.

To conclude the discussion in this section, relaxing the termination criterion is usually not worthwhile.

Basis Identification

An interior-point optimizer does not return an optimal basic solution unless the problem has a unique primal and dual optimal solution. Therefore, the interior-point optimizer has an optional post-processing step that computes an optimal basic solution starting from the optimal interior-point solution. More information about the basis identification procedure may be found in [AY96]. In the following we provide an overall idea of the procedure.

There are some cases in which a basic solution could be more valuable:

- a basic solution is often more accurate than an interior-point solution,
- a basic solution can be used to warm-start the simplex algorithm in case of reoptimization,
- a basic solution is in general more sparse, i.e. more variables are fixed to zero. This is particularly appealing when solving continuous relaxations of mixed integer problems, as well as in all applications in which sparser solutions are preferred.

To illustrate how the basis identification routine works, we use the following trivial example:

$$\begin{array}{ll} \text{minimize} & x + y \\ \text{subject to} & x + y = 1, \\ & x, y \geq 0. \end{array}$$

It is easy to see that all feasible solutions are also optimal. In particular, there are two basic solutions, namely

$$\begin{aligned} (x_1^*, y_1^*) &= (1, 0), \\ (x_2^*, y_2^*) &= (0, 1). \end{aligned}$$

The interior point algorithm will actually converge to the center of the optimal set, i.e. to $(x^*, y^*) = (1/2, 1/2)$ (to see this in **MOSEK** deactivate *Presolve*).

In practice, when the algorithm gets close to the optimal solution, it is possible to construct in polynomial time an initial basis for the simplex algorithm from the current interior point solution. This basis is used to warm-start the simplex algorithm that will provide the optimal basic solution. In most cases the constructed basis is optimal, or very few iterations are required by the simplex algorithm to make it optimal and hence the final *clean-up* phase be short. However, for some cases of ill-conditioned problems the additional simplex clean up phase may take of lot a time.

By default **MOSEK** performs a basis identification. However, if a basic solution is not needed, the basis identification procedure can be turned off. The parameters

- *MSK_IPAR_INTPNT_BASIS*,
- *MSK_IPAR_BI_IGNORE_MAX_ITER*, and
- *MSK_IPAR_BI_IGNORE_NUM_ERROR*

control when basis identification is performed.

The type of simplex algorithm to be used (primal/dual) can be tuned with the parameter *MSK_IPAR_BI_CLEAN_OPTIMIZER*, and the maximum number of iterations can be set with *MSK_IPAR_BI_MAX_ITERATIONS*.

Finally, it should be mentioned that there is no guarantee on which basic solution will be returned.

The Interior-point Log

Below is a typical log output from the interior-point optimizer:

The first line displays the number of threads used by the optimizer and the second line indicates if the optimizer chose to solve the primal or dual problem (see [MSK_IPAR_INTPNT_SOLVE_FORM](#)). The next lines display the problem dimensions as seen by the optimizer, and the Factor... lines show various statistics. This is followed by the iteration log.

Using the same notation as in Sec. 8.2.2 the columns of the iteration log have the following meaning:

- **ITE:** Iteration index k .
- **PFEAS:** $\|Ax^k - b\tau^k\|_\infty$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- **DFEAS:** $\|A^T y^k + s^k - c\tau^k\|_\infty$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- **GFEAS:** $| -c^T x^k + b^T y^k - \kappa^k |$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- **PRSTATUS:** This number converges to 1 if the problem has an optimal solution whereas it converges to -1 if that is not the case.
- **POBJ:** $c^T x^k / \tau^k$. An estimate for the primal objective value.
- **DOBJ:** $b^T y^k / \tau^k$. An estimate for the dual objective value.
- **MU:** $\frac{(x^k)^T s^k + \tau^k \kappa^k}{n+1}$. The numbers in this column should always converge to zero.
- **TIME:** Time spent since the optimization started.

8.2.3 The Simplex Optimizer

An alternative to the interior-point optimizer is the simplex optimizer. The simplex optimizer uses a different method that allows exploiting an initial guess for the optimal solution to reduce the solution time. Depending on the problem it may be faster or slower to use an initial guess; see Sec. 8.2.1 for a discussion. **MOSEK** provides both a primal and a dual variant of the simplex optimizer.

Simplex Termination Criterion

The simplex optimizer terminates when it finds an optimal basic solution or an infeasibility certificate. A basic solution is optimal when it is primal and dual feasible; see Sec. 7.1 for a definition of the primal and dual problem. Due to the fact that computations are performed in finite precision **MOSEK** allows violations of primal and dual feasibility within certain tolerances. The user can control the allowed primal and dual tolerances with the parameters [MSK_DPAR_BASIS_TOL_X](#) and [MSK_DPAR_BASIS_TOL_S](#).

Setting the parameter [MSK_IPAR_OPTIMIZER](#) to [MSK_OPTIMIZER_FREE_SIMPLEX](#) instructs **MOSEK** to select automatically between the primal and the dual simplex optimizers. Hence, **MOSEK** tries to choose the best optimizer for the given problem and the available solution. The same parameter can also be used to force one of the variants.

Starting From an Existing Solution

When using the simplex optimizer it may be possible to reuse an existing solution and thereby reduce the solution time significantly. When a simplex optimizer starts from an existing solution it is said to perform a *warm-start*. If the user is solving a sequence of optimization problems by solving the problem, making modifications, and solving again, **MOSEK** will warm-start automatically.

By default **MOSEK** uses presolve when performing a warm-start. If the optimizer only needs very few iterations to find the optimal solution it may be better to turn off the presolve.

Numerical Difficulties in the Simplex Optimizers

Though **MOSEK** is designed to minimize numerical instability, completely avoiding it is impossible when working in finite precision. **MOSEK** treats a “numerically unexpected behavior” event inside the optimizer as a *set-back*. The user can define how many set-backs the optimizer accepts; if that number is exceeded, the optimization will be aborted. Set-backs are a way to escape long sequences where the optimizer tries to recover from an unstable situation.

Examples of set-backs are: repeated singularities when factorizing the basis matrix, repeated loss of feasibility, degeneracy problems (no progress in objective) and other events indicating numerical difficulties. If the simplex optimizer encounters a lot of set-backs the problem is usually badly scaled; in such a situation try to reformulate it into a better scaled problem. Then, if a lot of set-backs still occur, trying one or more of the following suggestions may be worthwhile:

- Raise tolerances for allowed primal or dual feasibility: increase the value of
 - `MSK_DPAR_BASIS_TOL_X`, and
 - `MSK_DPAR_BASIS_TOL_S`.
- Raise or lower pivot tolerance: Change the `MSK_DPAR_SIMPLEX_ABS_TOL_PIV` parameter.
- Switch optimizer: Try another optimizer.
- Switch off crash: Set both `MSK_IPAR_SIM_PRIMAL_CRASH` and `MSK_IPAR_SIM_DUAL_CRASH` to 0.
- Experiment with other pricing strategies: Try different values for the parameters
 - `MSK_IPAR_SIM_PRIMAL_SELECTION` and
 - `MSK_IPAR_SIM_DUAL_SELECTION`.
- If you are using warm-starts, in rare cases switching off this feature may improve stability. This is controlled by the `MSK_IPAR_SIM_HOTSTART` parameter.
- Increase maximum number of set-backs allowed controlled by `MSK_IPAR_SIM_MAX_NUM_SETBACKS`.
- If the problem repeatedly becomes infeasible try switching off the special degeneracy handling. See the parameter `MSK_IPAR_SIM_DEGEN` for details.

The Simplex Log

Below is a typical log output from the simplex optimizer:

Optimizer	- solved problem	: the primal			
Optimizer	- Constraints	: 667			
Optimizer	- Scalar variables	: 1424 conic : 0			
Optimizer	- hotstart	: no			
ITER	DEGITER(%)	PFEAS	DFEAS	POBJ	DOBJ

The first lines summarize the problem the optimizer is solving. This is followed by the iteration log, with the following meaning:

- **ITER**: Number of iterations.
- **DEGITER(%)**: Ratio of degenerate iterations.
- **PFEAS**: Primal feasibility measure reported by the simplex optimizer. The numbers should be 0 if the problem is primal feasible (when the primal variant is used).
- **DFEAS**: Dual feasibility measure reported by the simplex optimizer. The number should be 0 if the problem is dual feasible (when the dual variant is used).
- **P0BJ**: An estimate for the primal objective value (when the primal variant is used).
- **D0BJ**: An estimate for the dual objective value (when the dual variant is used).
- **TIME**: Time spent since this instance of the simplex optimizer was invoked (in seconds).
- **TOTTIME**: Time spent since optimization started (in seconds).

8.3 Conic Optimization - Interior-point optimizer

For conic optimization problems only an interior-point type optimizer is available. The same optimizer is used for quadratic optimization problems which are internally reformulated to conic form.

8.3.1 The homogeneous primal-dual problem

The interior-point optimizer is an implementation of the so-called homogeneous and self-dual algorithm. For a detailed description of the algorithm, please see [ART03]. In order to keep our discussion simple we will assume that **MOSEK** solves a conic optimization problem of the form:

$$\begin{aligned} & \text{minimize} && c^T x \\ & \text{subject to} && Ax = b, \\ & && x \in \mathcal{K} \end{aligned} \tag{8.6}$$

where K is a convex cone. The corresponding dual problem is

$$\begin{aligned} & \text{maximize} && b^T y \\ & \text{subject to} && A^T y + s = c, \\ & && s \in \mathcal{K}^* \end{aligned} \tag{8.7}$$

where \mathcal{K}^* is the dual cone of \mathcal{K} . See Sec. 7.2 for definitions.

Since it is not known beforehand whether problem (8.6) has an optimal solution, is primal infeasible or is dual infeasible, the optimization algorithm must deal with all three situations. This is the reason that **MOSEK** solves the so-called homogeneous model

$$\begin{aligned} Ax - b\tau &= 0, \\ A^T y + s - c\tau &= 0, \\ -c^T x + b^T y - \kappa &= 0, \\ x &\in \mathcal{K}, \\ s &\in \mathcal{K}^*, \\ \tau, \kappa &\geq 0, \end{aligned} \tag{8.8}$$

where y and s correspond to the dual variables in (8.6), and τ and κ are two additional scalar variables. Note that the homogeneous model (8.8) always has a solution since

$$(x, y, s, \tau, \kappa) = (0, 0, 0, 0, 0)$$

is a solution, although not a very interesting one. Any solution

$$(x^*, y^*, s^*, \tau^*, \kappa^*)$$

to the homogeneous model (8.8) satisfies

$$(x^*)^T s^* + \tau^* \kappa^* = 0$$

i.e. complementarity. Observe that $x^* \in \mathcal{K}$ and $s^* \in \mathcal{K}^*$ implies

$$(x^*)^T s^* \geq 0$$

and therefore

$$\tau^* \kappa^* = 0.$$

since $\tau^*, \kappa^* \geq 0$. Hence, at least one of τ^* and κ^* is zero.

First, assume that $\tau^* > 0$ and hence $\kappa^* = 0$. It follows that

$$\begin{aligned} A \frac{x^*}{\tau^*} &= b, \\ A^T \frac{y^*}{\tau^*} + \frac{s^*}{\tau^*} &= c, \\ -c^T \frac{x^*}{\tau^*} + b^T \frac{y^*}{\tau^*} &= 0, \\ x^*/\tau^* &\in \mathcal{K}, \\ s^*/\tau^* &\in \mathcal{K}^*. \end{aligned}$$

This shows that $\frac{x^*}{\tau^*}$ is a primal optimal solution and $(\frac{y^*}{\tau^*}, \frac{s^*}{\tau^*})$ is a dual optimal solution; this is reported as the optimal interior-point solution since

$$(x, y, s) = \left(\frac{x^*}{\tau^*}, \frac{y^*}{\tau^*}, \frac{s^*}{\tau^*} \right)$$

is a primal-dual optimal solution.

On other hand, if $\kappa^* > 0$ then

$$\begin{aligned} Ax^* &= 0, \\ A^T y^* + s^* &= 0, \\ -c^T x^* + b^T y^* &= \kappa^*, \\ x^* &\in \mathcal{K}, \\ s^* &\in \mathcal{K}^*. \end{aligned}$$

This implies that at least one of

$$c^T x^* < 0 \tag{8.9}$$

or

$$b^T y^* > 0 \tag{8.10}$$

holds. If (8.9) is satisfied, then x^* is a certificate of dual infeasibility, whereas if (8.10) holds then y^* is a certificate of primal infeasibility.

In summary, by computing an appropriate solution to the homogeneous model, all information required for a solution to the original problem is obtained. A solution to the homogeneous model can be computed using a primal-dual interior-point algorithm [And09].

8.3.2 Interior-point Termination Criterion

Since computations are performed in finite precision, and for efficiency reasons, it is not possible to solve the homogeneous model exactly in general. Hence, an exact optimal solution or an exact infeasibility certificate cannot be computed and a reasonable termination criterion has to be employed.

In every iteration k of the interior-point algorithm a trial solution

$$(x^k, y^k, s^k, \tau^k, \kappa^k)$$

to the homogeneous model is generated, where

$$x^k \in \mathcal{K}, s^k \in \mathcal{K}^*, \tau^k, \kappa^k > 0.$$

Therefore, it is possible to compute the values:

$$\begin{aligned}\rho_p^k &= \arg \min_{\rho} \left\{ \rho \mid \left\| A \frac{x^k}{\tau^k} - b \right\|_{\infty} \leq \rho \varepsilon_p (1 + \|b\|_{\infty}) \right\}, \\ \rho_d^k &= \arg \min_{\rho} \left\{ \rho \mid \left\| A^T \frac{y^k}{\tau^k} + \frac{s^k}{\tau^k} - c \right\|_{\infty} \leq \rho \varepsilon_d (1 + \|c\|_{\infty}) \right\}, \\ \rho_g^k &= \arg \min_{\rho} \left\{ \rho \mid \left(\frac{(x^k)^T s^k}{(\tau^k)^2}, \left| \frac{c^T x^k}{\tau^k} - \frac{b^T y^k}{\tau^k} \right| \right) \leq \rho \varepsilon_g \max \left(1, \frac{\min(|c^T x^k|, |b^T y^k|)}{\tau^k} \right) \right\}, \\ \rho_{pi}^k &= \arg \min_{\rho} \left\{ \rho \mid \left\| A^T y^k + s^k \right\|_{\infty} \leq \rho \varepsilon_i b^T y^k, b^T y^k > 0 \right\} \text{ and} \\ \rho_{di}^k &= \arg \min_{\rho} \left\{ \rho \mid \left\| Ax^k \right\|_{\infty} \leq -\rho \varepsilon_i c^T x^k, c^T x^k < 0 \right\}.\end{aligned}$$

Note $\varepsilon_p, \varepsilon_d, \varepsilon_g$ and ε_i are nonnegative user specified tolerances.

Optimal Case

Observe ρ_p^k measures how far x^k/τ^k is from being a good approximate primal feasible solution. Indeed if $\rho_p^k \leq 1$, then

$$\left\| A \frac{x^k}{\tau^k} - b \right\|_{\infty} \leq \varepsilon_p (1 + \|b\|_{\infty}). \quad (8.11)$$

This shows the violations in the primal equality constraints for the solution x^k/τ^k is small compared to the size of b given ε_p is small.

Similarly, if $\rho_d^k \leq 1$, then $(y^k, s^k)/\tau^k$ is an approximate dual feasible solution. If in addition $\rho_g \leq 1$, then the solution $(x^k, y^k, s^k)/\tau^k$ is approximate optimal because the associated primal and dual objective values are almost identical.

In other words if $\max(\rho_p^k, \rho_d^k, \rho_g^k) \leq 1$, then

$$\frac{(x^k, y^k, s^k)}{\tau^k}$$

is an approximate optimal solution.

Dual Infeasibility Certificate

Next assume that $\rho_{di}^k \leq 1$ and hence

$$\left\| Ax^k \right\|_{\infty} \leq -\varepsilon_i c^T x^k \text{ and } -c^T x^k > 0$$

holds. Now in this case the problem is declared dual infeasible and x^k is reported as a certificate of dual infeasibility. The motivation for this stopping criterion is as follows. Let

$$\bar{x} := \frac{x^k}{-c^T x^k}$$

and it is easy to verify that

$$\left\| A \bar{x} \right\|_{\infty} \leq \varepsilon_i \text{ and } c^T \bar{x} = -1$$

which shows \bar{x} is an approximate certificate of dual infeasibility, where ε_i controls the quality of the approximation.

Primal Infeasibility Certificate

Next assume that $\rho_{pi}^k \leq 1$ and hence

$$\|A^T y^k + s^k\|_\infty \leq \varepsilon_i b^T y^k \text{ and } b^T y^k > 0$$

holds. Now in this case the problem is declared primal infeasible and (y^k, s^k) is reported as a certificate of primal infeasibility. The motivation for this stopping criterion is as follows. Let

$$\bar{y} := \frac{y^k}{b^T y^k} \text{ and } \bar{s} := \frac{s^k}{b^T y^k}$$

and it is easy to verify that

$$\|A^T \bar{y} + \bar{s}\|_\infty \leq \varepsilon_i \text{ and } b^T \bar{y} = 1$$

which shows (\bar{y}, \bar{s}) is an approximate certificate of dual infeasibility, where ε_i controls the quality of the approximation.

8.3.3 Adjusting optimality criteria

It is possible to adjust the tolerances ε_p , ε_d , ε_g and ε_i using parameters; see the next table for details. Note that although this section discusses the conic optimizer, if the problem was originally input as a quadratic or quadratically constrained optimization problem then the parameter names that apply are those from the third column (with infix QO instead of CO).

Table 8.2: Parameters employed in termination criterion

Tolerance Parameter	Name (for conic problems)	Name (for quadratic problems)
ε_p	<code>MSK_DPAR_INTPNT_CO_TOL_PFEAS</code>	<code>MSK_DPAR_INTPNT_QO_TOL_PFEAS</code>
ε_d	<code>MSK_DPAR_INTPNT_CO_TOL_DFEAS</code>	<code>MSK_DPAR_INTPNT_QO_TOL_DFEAS</code>
ε_g	<code>MSK_DPAR_INTPNT_CO_TOL_REL_GAP</code>	<code>MSK_DPAR_INTPNT_QO_TOL_REL_GAP</code>
ε_i	<code>MSK_DPAR_INTPNT_CO_TOL_INFEAS</code>	<code>MSK_DPAR_INTPNT_QO_TOL_INFEAS</code>

The default values of the termination tolerances are chosen such that for a majority of problems appearing in practice it is not possible to achieve much better accuracy. Therefore, tightening the tolerances usually is not worthwhile. However, an inspection of (8.11) reveals that the quality of the solution depends on $\|b\|_\infty$ and $\|c\|_\infty$; the smaller the norms are, the better the solution accuracy.

The interior-point method as implemented by **MOSEK** will converge toward optimality and primal and dual feasibility at the same rate [And09]. This means that if the optimizer is stopped prematurely then it is very unlikely that either the primal or dual solution is feasible. Another consequence is that in most cases all the tolerances, ε_p , ε_d , ε_g and ε_i , have to be relaxed together to achieve an effect.

If the optimizer terminates without locating a solution that satisfies the termination criteria, for example because of a stall or other numerical issues, then it will check if the solution found up to that point satisfies the same criteria with all tolerances multiplied by the value of `MSK_DPAR_INTPNT_CO_TOL_NEAR_REL`. If this is the case, the solution is still declared as optimal.

To conclude the discussion in this section, relaxing the termination criterion is usually not worthwhile.

8.3.4 The Interior-point Log

Below is a typical log output from the interior-point optimizer:

Optimizer - threads	:	20	
Optimizer - solved problem	:	the primal	
Optimizer - Constraints	:	1	
Optimizer - Cones	:	2	
Optimizer - Scalar variables	:	6	conic : 6
Optimizer - Semi-definite variables	:	0	scalarized : 0
Factor - setup time	:	0.00	dense det. time : 0.00

(continues on next page)

(continued from previous page)

Factor	- ML order time	: 0.00		GP order time	: 0.00					
Factor	- nonzeros before factor	: 1		after factor	: 1					
Factor	- dense dim.	: 0		flops	: 1.					
$\hookrightarrow 70e+01$										
\hookrightarrow TIME										
ITE	PFEAS	DFEAS	GFEAS	PRSTATUS	POBJ	DOBJ				
0	1.0e+00	2.9e-01	3.4e+00	0.00e+00	2.414213562e+00	0.000000000e+00				
\hookrightarrow	0.01									
1	2.7e-01	7.9e-02	2.2e+00	8.83e-01	6.969257574e-01	-9.685901771e-03				
\hookrightarrow	0.01									
2	6.5e-02	1.9e-02	1.2e+00	1.16e+00	7.606090061e-01	6.046141322e-01				
\hookrightarrow	0.01									
3	1.7e-03	5.0e-04	2.2e-01	1.12e+00	7.084385672e-01	7.045122560e-01

4	1.4e-08	4.2e-09	4.9e-08	1.00e+00	7.071067941e-01	7.071067599e-01				
\hookrightarrow	0.01									

The first line displays the number of threads used by the optimizer and the second line indicates if the optimizer chose to solve the primal or dual problem (see `MSK_IPAR_INTPNT_SOLVE_FORM`). The next lines display the problem dimensions as seen by the optimizer, and the Factor... lines show various statistics. This is followed by the iteration log.

Using the same notation as in Sec. 8.3.1 the columns of the iteration log have the following meaning:

- ITE: Iteration index k .
- PFEAS: $\|Ax^k - b\tau^k\|_\infty$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- DFEAS: $\|A^T y^k + s^k - c\tau^k\|_\infty$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- GFEAS: $| -c^T x^k + b^T y^k - \kappa^k |$. The numbers in this column should converge monotonically towards zero but may stall at low level due to rounding errors.
- PRSTATUS: This number converges to 1 if the problem has an optimal solution whereas it converges to -1 if that is not the case.
- POBJ: $c^T x^k / \tau^k$. An estimate for the primal objective value.
- DOBJ: $b^T y^k / \tau^k$. An estimate for the dual objective value.
- MU: $\frac{(x^k)^T s^k + \tau^k \kappa^k}{n+1}$. The numbers in this column should always converge to zero.
- TIME: Time spent since the optimization started (in seconds).

8.4 The Optimizer for Mixed-Integer Problems

Solving optimization problems where one or more of the variables are constrained to be integer valued is called Mixed-Integer Optimization (MIO). For an introduction to model building with integer variables, the reader is recommended to consult the **MOSEK Modeling Cookbook**, and for further reading we highlight textbooks such as [Wol98] or [CCornuejolsZ14].

MOSEK can perform mixed-integer

- linear (MIL),
- quadratic (MIQO) and quadratically constrained (MIQCQO), and
- conic (MICO)

optimization, except for mixed-integer semidefinite problems.

By default the mixed-integer optimizer is run-to-run deterministic. This means that if a problem is solved twice on the same computer with identical parameter settings and no time limit, then the obtained solutions will be identical. The mixed-integer optimizer is parallelized, i.e., it can exploit multiple cores during the optimization.

In practice, it often happens that the integer variables in MIO problems are actually binary variables, taking values in $\{0, 1\}$, leading to Mixed- or pure binary problems. In the general setting however, an integer variable may have arbitrary lower and upper bounds.

8.4.1 Branch-and-Bound

In order to succeed in solving mixed-integer problems, it can be useful to have a basic understanding of the underlying solution algorithms. The most important concept in this regard is arguably the so-called Branch-and-Bound algorithm, employed also by **MOSEK**. The more experienced reader may skip this section and advance directly to Sec. 8.4.2.

In order to comprehend Branch-and-Bound, the concept of a *relaxation* is important. Consider for example a mixed-integer linear optimization problem of minimization type

$$\begin{aligned} z^* = & \text{ minimize } c^T x \\ \text{subject to } & Ax = b \\ & x \geq 0 \\ & x_j \in \mathbb{Z}, \quad \forall j \in \mathcal{J}. \end{aligned} \tag{8.12}$$

It has the continuous relaxation

$$\begin{aligned} \underline{z} = & \text{ minimize } c^T x \\ \text{subject to } & Ax = b \\ & x \geq 0, \end{aligned} \tag{8.13}$$

simply obtained by ignoring the integrality restrictions. The first step in Branch-and-Bound is to solve this so-called *root relaxation*, which is a continuous optimization problem. Since (8.13) is less constrained than (8.12), one certainly gets

$$\underline{z} \leq z^*,$$

and \underline{z} is therefore called the *objective bound*: it bounds the optimal objective value from below.

After the solution of the root relaxation, in the most likely outcome there will be one or more integer constrained variables with fractional values, i.e., violating the integrality constraints. Branch-and-Bound now takes such a variable, $x_j = f_j \in \mathbb{R} \setminus \mathbb{Z}$ with $j \in \mathcal{J}$, say, and creates two branches leading to relaxations with the additional constraint $x_j \leq \lfloor f_j \rfloor$ or $x_j \geq \lceil f_j \rceil$, respectively. The intuitive idea here is to exclude the undesired fractional value from the outcomes in the two created branches. If the integer variable was actually a binary variable, branching would lead to fixing its value to 0 in one branch, and to 1 in the other.

The Branch-and-Bound process continues in this way and successively solves relaxations and creates branches to refined relaxations. Whenever the solution \hat{x} to some relaxation does not violate any integrality constraints, it is feasible to (8.12) and is called an *integer feasible solution*. There is no guarantee though that it is also optimal, its solution value $\bar{z} := c^T \hat{x}$ is only an upper bound on the optimal objective value,

$$z^* \leq \bar{z}.$$

By the successive addition of constraints in the created branches, the objective bound \underline{z} (now defined as the minimum over all solution values of so far solved relaxations) can only increase during the algorithm. At the same time, the upper bound \bar{z} (the solution value of the best integer feasible solution encountered so far, also called *incumbent solution*) can only decrease during the algorithm. Since at any time we also have

$$\underline{z} \leq z^* \leq \bar{z},$$

objective bound and incumbent solution value are encapsulating the optimal objective value, eventually converging to it.

The Branch-and-Bound scheme can be depicted by means of a tree, where branches and relaxations correspond to edges and nodes. Figure Fig. 8.1 shows an example of such a tree. The strength of Branch-and-Bound is its ability to prune nodes in this tree, meaning that no new child nodes will be created. Pruning can occur in several cases:

- A relaxation leads to an integer feasible solution \hat{x} . In this case we may update the incumbent and its solution value \bar{z} , but no new branches need to be created.
- A relaxation is infeasible. The subtree rooted at this node cannot contain any feasible relaxation, so it can be discarded.
- A relaxation has a solution value that exceeds \bar{z} . The subtree rooted at this node cannot contain any integer feasible solution with a solution value better than the incumbent we already have, so it can be discarded.

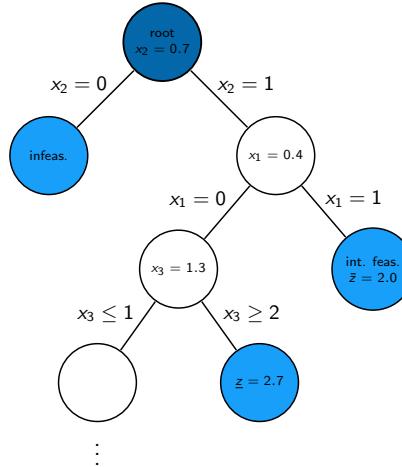

Fig. 8.1: An exemplary Branch-and-Bound tree. Pruned nodes are shown in light blue.

Having objective bound and incumbent solution value is a quite fundamental property of Branch-and-Bound, and helps to asses solution quality and control termination of the algorithm, as we detail in the next section. Note that the above explanation is coined for minimization problems, but the Branch-and-bound scheme has a straightforward extension to maximization problems.

8.4.2 Solution quality and termination criteria

The issue of terminating the mixed-integer optimizer is rather delicate. Mixed-integer optimization is generally much harder than continuous optimization; in fact, solving continuous sub-problems is just one component of a mixed-integer optimizer. Despite the ability to prune nodes in the tree, the computational effort required to solve mixed-integer problems grows exponentially with the size of the problem in a worst-case scenario (solving mixed-integer problems is NP-hard). For instance, a problem with n binary variables, may require the solution of 2^n relaxations. The value of 2^n is huge even for moderate values of n . In practice it is often advisable to accept near-optimal or appproximate solutions in order to counteract this complexity burden. The user has numerous possibilities of influencing optimizer termination with various parameters, in particular related to solution quality, and the most important ones are highlighted here.

Solution quality in terms of optimality

In order to assess the quality of any incumbent solution in terms of its objective value, one may check the *optimality gap*, defined as

$$\epsilon = |(\text{incumbent solution value}) - (\text{objective bound})| = |\bar{z} - \underline{z}|.$$

It measures how much the objectives of the incumbent and the optimal solution can deviate in the worst case. Often it is more meaningful to look at the *relative optimality gap*

$$\epsilon_{\text{rel}} = \frac{|\bar{z} - \underline{z}|}{\max(\delta_1, |\bar{z}|)}.$$

This is essentially the above *absolute* optimality gap normalized against the magnitude of the incumbent solution value; the purpose of the (small) constant δ_1 is to avoid overweighing incumbent solution values that are very close to zero. The relative optimality gap can thus be interpreted as answering the question: “*Within what fraction of the optimal solution is the incumbent solution in the worst case?*”

Absolute and relative optimality gaps provide useful means to define termination criteria for the mixed-integer optimizer in **MOSEK**. The idea is to terminate the optimization process as soon as the quality of the incumbent solution, measured in absolute or relative gap, is good enough. In fact, whenever an incumbent solution is located, the criterion

$$\epsilon \leq \delta_2 \text{ or } \epsilon_{\text{rel}} \leq \delta_3$$

is checked. If satisfied, i.e., if either absolute or relative optimality gap are below the thresholds δ_2 or δ_3 (see Table 8.3), the optimizer terminates and reports the incumbent as an optimal solution. The optimality gaps at termination can always be retrieved through the information items `MSK_DINF_MIO_OBJ_ABS_GAP` and `MSK_DINF_MIO_OBJ_REL_GAP`.

The tolerances discussed above can be adjusted using suitable parameters, see Table 8.3. By default, the optimality parameters δ_2 and δ_3 are quite small, i.e., restrictive. These default values for the absolute and relative gap amount to solving any instance to (almost) optimality: the incumbent is required to be within at most a tiny percentage of the optimal solution. As anticipated, this is not tractable in many practical situations, and one should resort to finding near-optimal solutions quickly rather than insisting on finding the optimal one. It may happen, for example, that an optimal or close-to-optimal solution is found very early by the optimizer, but it spends a huge amount of further computational time for branching, trying to increase \underline{z} that last missing bit: a typical situation that practitioners would want to avoid. The concept of optimality gaps is fundamental for controlling solution quality when resorting to near-optimal solutions.

MIO performance tweaks: termination criteria

One of the first things to do in order to cut down excessive solution time is to increase the relative gap tolerance `MSK_DPAR_MIO_TOL_REL_GAP` to some non-default value, so as to not insist on finding optimal solutions. Typical values could be 0.01, 0.05 or 0.1, guaranteeing that the delivered solutions lie within 1%, 5% or 10% of the optimum. Increasing the tolerance will lead to less computational time spent by the optimizer.

Solution quality in terms of feasibility

For an optimizer relying on floating-point arithmetic like the mixed-integer optimizer in **MOSEK**, it may be hard to achieve exact integrality of the solution values of integer variables in most cases, and it makes sense to numerically relax this constraint. Any candidate solution \hat{x} is accepted as integer feasible if the criterion

$$\min(\hat{x}_j - \lfloor \hat{x}_j \rfloor, \lceil \hat{x}_j \rceil - \hat{x}_j) \leq \delta_4 \quad \forall j \in \mathcal{J}$$

is satisfied, meaning that \hat{x}_j is at most δ_4 away from the nearest integer. As above, δ_4 can be adjusted using a parameter, see [Table 8.3](#), and impacts the quality of the achieved solution in terms of integer feasibility. By influencing what solution may be accepted as incumbent, it can also have an impact on the termination of the optimizer.

MIO performance tweaks: feasibility criteria

Whether increasing the integer feasibility tolerance `MSK_DPAR_MIO_TOL_ABS_RELAX_INT` leads to less solution time is highly problem dependent. Intuitively, the optimizer is more flexible in finding new incumbent solutions so as to improve \bar{z} . But this effect has to be examined with care on individual instances: it may worsen solution quality with no effect at all on the solution time. It may in some cases even lead to contrary effects on the solution time.

Table 8.3: Tolerances for the mixed-integer optimizer.

Tolerance	Parameter name	Default value
δ_1	<code>MSK_DPAR_MIO_REL_GAP_CONST</code>	1.0e-10
δ_2	<code>MSK_DPAR_MIO_TOL_ABS_GAP</code>	0.0
δ_3	<code>MSK_DPAR_MIO_TOL_REL_GAP</code>	1.0e-4
δ_4	<code>MSK_DPAR_MIO_TOL_ABS_RELAX_INT</code>	1.0e-5

Further controlling optimizer termination

There are more ways to limit the computational effort employed by the mixed-integer optimizer by simply limiting the number of explored branches, solved relaxations or updates of the incumbent solution. When any of the imposed limits is hit, the optimizer terminates and the incumbent solution may be retrieved. See [Table 8.4](#) for a list of corresponding parameters. In contrast to the parameters discussed in Sec. 8.4.2, interfering with these does not maintain any guarantees in terms of solution quality.

Table 8.4: Other parameters affecting the integer optimizer termination criterion.

Parameter name	Explanation
<code>MSK_IPAR_MIO_MAX_NUM_BRANCHES</code>	Maximum number of branches allowed.
<code>MSK_IPAR_MIO_MAX_NUM_RELAXS</code>	Maximum number of relaxations allowed.
<code>MSK_IPAR_MIO_MAX_NUM_SOLUTIONS</code>	Maximum number of feasible integer solutions allowed.

8.4.3 The Mixed-Integer Log

The Branch-and-Bound scheme from [Sec. 8.4.1](#) is only the basic skeleton of the mixed-integer optimizer in **MOSEK**, and several components are built on top of that in order to enhance its functionality and increase its speed. A mixed-integer optimizer is sometimes referred to as a “*giant bag of tricks*”, and it would be impossible to describe all of these tricks here. Yet, some of the additional components are worth mentioning. They can be influenced by various user parameters, and although the default values of these parameters are optimized to work well on average mixed-integer problems, it may pay off to adjust them for an individual problem, or a specific problem class. The mixed-integer log can give insights on which parameters might be worth an adjustment. Below is a typical log output:

```
Presolve started.
Presolve terminated. Time = 0.23, probing time = 0.09
Presolved problem: 1176 variables, 1344 constraints, 4968 non-zeros
Presolved problem: 328 general integer, 392 binary, 456 continuous
Clique table size: 55
Symmetry factor : 0.79 (detection time = 0.01)
Removed blocks : 2
BRANCHES RELAXS ACT_NDS DEPTH BEST_INT_OBJ          BEST_RELAX_OBJ      REL_GAP(
→%) TIME

The main part here is the iteration log, a progressing series of similar rows reflecting the progress made during the Branch-and-bound process. The columns have the following meanings:

- BRANCHES: Number of branches / nodes generated.
- RELAXS: Number of relaxations solved.
- ACT_NDS: Number of active / non-processed nodes.
- DEPTH: Depth of the last solved node.
- BEST_INT_OBJ: The incumbent solution / best integer objective value, \bar{z} .
- BEST_RELAX_OBJ: The objective bound, \underline{z} .

- **REL_GAP (%)**: Relative optimality gap, $100\% \cdot \epsilon_{\text{rel}}$
- **TIME**: Time (in seconds) from the start of optimization.

Also a short solution summary with several statistics is printed. When the solution time for a mixed-integer problem has to be cut down, the log can help to understand where time is spent and what might be improved. We go into some more detail about some further items in the mixed-integer log giving hints about individual components of the optimizer.

Presolve

Similar to the case of continuous problems, see Sec. 8.1, the mixed-integer optimizer applies various presolve reductions before the actual Branch-and-bound is initiated. The first lines of the mixed-integer log contain a summary of the presolve process, including the time spent therein (`Presolve terminated. Time = 0.23...`). Just as in the continuous case, the use of presolve can be controlled with the parameter `MSK_IPAR_PRESOLVE_USE`. If presolve time seems excessive, instead of switching it off completely one may also try to reduce the time spent in one or more of its individual components. On some models it can also make sense to increase the use of a certain presolve technique. Table Table 8.5 lists some of these with their respective parameters.

Table 8.5: Parameters affecting presolve

Parameter name	Explanation	Possible reference in log
<code>MSK_IPAR_MIO_PROBING_LEVEL</code>	Probing aggressivity level.	<code>... probing time = 0.09</code>
<code>MSK_IPAR_MIO_SYMMETRY_LEVEL</code>	Symmetry detection aggressivity level.	<code>Symmetry factor : 0.79 (detection time = 0.01)</code>

<code>MSK_IPAR_MIO_PRESOLVE_AGG</code>	Should variable aggregation be enabled?	—

Primal Heuristics

It might happen that the value in the column `BEST_INT_OBJ` stalls over a long period of log lines, an indication that the optimizer has a hard time improving the incumbent solution, i.e., \bar{z} . Solving relaxations in the tree to an integer feasible solution \hat{x} is not the only way to find new incumbent solutions. There is a variety of procedures that, given a mixed-integer problem in a generic form like (8.12), attempt to produce integer feasible solutions in an ad-hoc way. These procedures are called Primal Heuristics, and several of them are implemented in **MOSEK**. For example, whenever a relaxation leads to a fractional solution, one may round the solution values of the integer variables, in various ways, and hope that the outcome is still feasible to the remaining constraints. Primal heuristics are mostly employed while processing the root node, but play a role throughout the whole solution process. The goal of a primal heuristic is to improve the incumbent solution and thus the bound \bar{z} , and this can of course affect the quality of the solution that is returned after termination of the optimizer. The user parameters affecting primal heuristics are listed in Table 8.6.

MIO performance tweaks: primal heuristics

- If the mixed-integer optimizer struggles to improve the incumbent solution `BEST_INT_OBJ`, it can be helpful to intensify the use of primal heuristics.
 - Set parameters related to primal heuristics to more aggressive values than the default ones, so that more effort is spent in this component. A list of the respective parameters can be found in Table 8.6. In particular, if the optimizer has difficulties finding any integer feasible solution at all, indicated by `NA` in the column `BEST_INT_OBJ` in the mixed-integer log, one may try to activate a construction heuristic like the Feasibility Pump with `MSK_IPAR_MIO_FEASPUMP_LEVEL`.

- Specify a good initial solution: In many cases a good feasible solution is either known or easily computed using problem-specific knowledge that the optimizer does not have. If so, it is usually worthwhile to use this as a starting point for the mixed-integer optimizer.
 - For feasibility problems, i.e., problems having a constant objective, the goal is to find a single integer feasible solution, and this can be hard by itself on some instances. Try setting the objective to something meaningful anyway, even if the underlying application does not require this. After all, the feasible set is not changed, but the optimizer might benefit from being able to pursue a concrete goal.
 - In rare cases it may also happen that the optimizer spends an excessive amount of time on primal heuristics without drawing any benefit from it, and one may try to limit their use with the respective parameters.
-

Table 8.6: Parameters affecting primal heuristics

Parameter name	Explanation
<code>MSK_IPAR_MIO_HEURISTIC_LEVEL</code>	Primal heuristics aggressivity level.
<code>MSK_IPAR_MIO_RINS_MAX_NODES</code>	Maximum number of nodes allowed in the RINS heuristic.
<code>MSK_IPAR_MIO_RENS_MAX_NODES</code>	Maximum number of nodes allowed in the RENS heuristic.
<code>MSK_IPAR_MIO_CROSSOVER_MAX_NODES</code>	Maximum number of nodes allowed in the Crossover heuristic.
<code>MSK_IPAR_MIO_OPT_FACE_MAX_NODES</code>	Maximum number of nodes allowed in the optimal face heuristic.
<code>MSK_IPAR_MIO_FEASPUMP_LEVEL</code>	Way of using the Feasibility Pump heuristic.

Cutting Planes

It might as well happen that the value in the colum `BEST_RELAX_OBJ` stalls over a long period of log lines, an indication that the optimizer has a struggles to improve the objective bound \underline{z} . A component of the optimizer designed to act on the objective bound is given by Cutting planes, also called cuts or valid inequalities. Cuts do not remove any integer feasible solutions from the feasible set of the mixed-integer problem (8.12). They may, however, remove solutions from the feasible set of the relaxation (8.13), ideally making it a *stronger* relaxation with better objective bound.

As an example, take the constraints

$$2x_1 + 3x_2 + x_3 \leq 4, \quad x_1, x_2 \in \{0, 1\}, \quad x_3 \geq 0. \quad (8.14)$$

One may realize that there cannot be a feasible solution in which both binary variables take on a value of 1. So certainly

$$x_1 + x_2 \leq 1 \quad (8.15)$$

is a valid inequality (there is no integer solution satisfying (8.14), but violating (8.15)). The latter does cut off a portion of the feasible region of the continuous relaxation of (8.14) though, obtained by replacing $x_1, x_2 \in \{0, 1\}$ with $x_1, x_2 \in [0, 1]$. For example, the fractional point $(x_1, x_2, x_3) = (0.5, 1, 0)$ is feasible to the relaxation, but violates the cut (8.15).

There are many classes of general-purpose cutting planes that may be generated for a mixed-integer problem in a generic form like (8.12), and **MOSEK**'s mixed-integer optimizer supports several of them. For instance, the above is an example of a so-called clique cut. The most effort on generating cutting planes is spent after the solution of the root relaxation; the beginning and the end of root cut generation is highlighted in the log, and the number of log lines in between reflects to the computational effort spent here. Also the solution summary at the end of the log highlights for each cut class the number of generated cuts. Cuts can also be generated later on in the tree, which is why we also use the term Branch-and-cut, an extension of the basic Branch-and-bound scheme. Cuts aim at improving the objective bound \underline{z} and can thus have significant impact on the solution time. The user parameters affecting cut generation can be seen in Table 8.7.

MIO performance tweaks: cutting planes

- If the mixed-integer optimizer struggles to improve the objective bound `BEST_RELAX_OBJ`, it can be helpful to intensify the use of cutting planes.
 - Some types of cutting planes are not activated by default, but doing so may help to improve the objective bound.
 - The parameters `MSK_DPAR_MIO_TOL_REL_DUAL_BOUND_IMPROVEMENT` and `MSK_IPAR_MIO_CUT_SELECTION_LEVEL` determine how aggressively cuts will be generated and selected.
 - If some valid inequalities can be deduced from problem-specific knowledge that the optimizer does not have, it may be helpful to add these to the problem formulation as constraints. This has to be done with care, since there is a tradeoff between the benefit obtained from an improved objective bound, and the amount of additional constraints that make the relaxations larger.
 - In rare cases it may also be observed that the optimizer spends an excessive effort on cutting planes, and one may limit their use with `MSK_IPAR_MIO_MAX_NUM_ROOT_CUT_ROUNDS`, or by disabling a certain type of cutting planes.
-

Table 8.7: Parameters affecting cutting planes

Parameter name	Explanation
<code>MSK_IPAR_MIO_CUT_CLIQUE</code>	Should clique cuts be enabled?
<code>MSK_IPAR_MIO_CUT_CMIR</code>	Should mixed-integer rounding cuts be enabled?
<code>MSK_IPAR_MIO_CUT_GMI</code>	Should GMI cuts be enabled?
<code>MSK_IPAR_MIO_CUT IMPLIED_BOUND</code>	Should implied bound cuts be enabled?
<code>MSK_IPAR_MIO_CUT_KNAPSACK_COVER</code>	Should knapsack cover cuts be enabled?
<code>MSK_IPAR_MIO_CUT_LIPRO</code>	Should lift-and-project cuts be enabled?
<code>MSK_IPAR_MIO_CUT_SELECTION_LEVEL</code>	Cut selection aggressivity level.
<code>MSK_IPAR_MIO_MAX_NUM_ROOT_CUT_ROUNDS</code>	Maximum number of root cut rounds.
<code>MSK_DPAR_MIO_TOL_REL_DUAL_BOUND_IM</code>	Minimum required objective bound improvement during root cut generation.

Restarts

The mixed-integer optimizer employs so-called restarts, i.e., if the progress made while exploring the tree is deemed unsufficient, it might decide to restart the solution process from scratch, possibly making use of the information collected so far. When a restart happens, this is displayed in the log:

[...]

(continues on next page)

↪ 7.3

[...]

Restarts tend to be useful especially for hard models. However, in individual cases the optimizer may decide to perform a restart while it would have been better to continue exploring the tree. Their use can be controlled with the parameter `MSK_IPAR_MIO_MAX_NUM_RESTARTS`.

Block decomposition

Sometimes the optimizer faces a model that actually represents two or more completely independent subproblems. For a linear problem such as (8.13), this means that the constraint matrix A is a block-diagonal. Block-diagonal structure can occur after **MOSEK** applies some presolve reductions, e.g., a variable is fixed that was the only variable connecting two otherwise independent subproblems. Or, more rarely, the original model provided by the user is already block-diagonal.

In principle, solving such blocks independently is easier than letting the optimizer work on the single, large model, and **MOSEK** thus tries to exploit this structure. Some blocks may be completely solved and removed from the model during presolve, which can be seen by a line at the end of the presolve summary, see also Sec. 8.4.3. If after presolve there are still independent blocks, **MOSEK** can apply a dedicated algorithm to solve them independently while periodically combining their individual solution statuses (such as incumbent solutions and objective bounds) to the solution status of the original model. Just like the removal of blocks during presolve, the application of this latter strategy is indicated in the log:

How block-diagonal structure is detected and handled by the optimizer can be controlled with the parameter `MSK_IPAR_MIO_INDEPENDENT_BLOCK_LEVEL`.

8.4.4 Mixed-Integer Nonlinear Optimization

Due to the involved non-linearities, MI(QC)QO or MICO problems are on average harder than MILO problems of comparable size. Yet, the Branch-and-Bound scheme can be applied to these probelm classes in a straightforward manner. The relaxations have to be solved as conic problems with the interior point algorithm in that case, see Sec. 8.3, opposed to MILO where it is often beneficial to solve relaxations with the dual simplex method, see Sec. 8.2.3. There is another solution approach for these types of problems implemented in **MOSEK**, namely the Outer-Approximation algorithm, making use of dynamically refined linear approximations of the non-linearities.

MICO performance tweaks: choice of algorithm

Whether conic Branch-and-Bound or Outer-Approximation is applied to a mixed-integer conic problem can be set with `MSK_IPAR_MIO_CONIC_OUTER_APPROXIMATION`. The best value for this option is highly problem dependent.

MI(QC)QO

MOSEK is specialized in solving linear and conic optimization problems, both with or without mixed-integer variables. Just like for continuous problems, mixed-integer quadratic problems are converted internally to conic form, see Sec. 7.4.1

Contrary to the continuous case, **MOSEK** can solve certain mixed-integer quadratic problems where one or more of the involved matrices are not positive semidefinite, so-called non-convex MI(QC)QO problems. These are automatically reformulated to an equivalent convex MI(QC)QO problem, provided that such a reformulation is possible on the given instance (otherwise **MOSEK** will reject the problem and issue an error message). The concept of reformulations can also affect the solution times of MI(QC)QO problems.

MI(QC)QO performance tweaks: applying a reformulation method

There are several reformulation methods for MI(QC)QO problems, available through the parameter `MSK_IPAR_MIO_QCQO_REFORMULATION_METHOD`. The chosen method can have significant impact on the mixed-integer optimizer's speed on such problems, both convex and non-convex. The best value for this option is highly problem dependent.

8.4.5 Disjunctive constraints

Problems with disjunctive constraints (DJC) are typically reformulated to mixed-integer problems, and even if this is not the case they are solved with an algorithm that is based on the mixed-integer optimizer. In **MOSEK**, these problems thus fall into the realm of MIO. In particular, **MOSEK** automatically attempts to replace any DJC by so called big-M constraints, potentially after transforming it to several, less complicated DJCs. As an example, take the DJC

$$[z = 0] \vee [z = 1, x_1 + x_2 \geq 1000],$$

where $z \in \{0, 1\}$ and $x_1, x_2 \in [0, 750]$. This is an example of a DJC formulation of a so-called indicator constraint. A big-M reformulation is given by

$$x_1 + x_2 \geq 1000 - M \cdot (1 - z),$$

where $M > 0$ is a large constant. The practical difficulty of these constructs is that M should always be sufficiently large, but ideally not larger. Too large values for M can be harmful for the mixed-integer optimizer. During presolve, and taking into account the bounds of the involved variables, **MOSEK** automatically reformulates DJCs to big-M constraints if the required M values do not exceed the parameter `MSK_DPAR_MIO_DJC_MAX_BIGM`. From a performance point-of-view, all DJCs would ideally be linearized to big-Ms after presolve without changing this parameter's default value of 1.0e6. Whether or not this is the case can be seen by retrieving the information item `MSK_IINF_MIO_PRESOLVED_NUMDJC`, or by a line in the mixed-integer optimizer's log as in the example below. Both state the number of remaining disjunctions after presolve.

```

Presolved problem: 305 variables, 204 constraints, 708 non-zeros
Presolved problem: 0 general integer, 100 binary, 205 continuous

[ ... ]

```

DJC performance tweaks: managing variable bounds

- Always specify the tightest known bounds on the variables of any problem with DJCs, even if they seem trivial from the user-perspective. The mixed-integer optimizer can only benefit from these when reformulating DJCs and thus gain performance; even if bounds don't help with reformulations, it is very unlikely that they hurt the optimizer.
 - Increasing `MSK_DPAR_MIO_DJC_MAX_BIGM` can lead to more DJC reformulations and thus increase optimizer speed, but it may in turn hurt numerical solution quality and has to be examined with care. The other way round, on numerically challenging instances with DJCs, decreasing `MSK_DPAR_MIO_DJC_MAX_BIGM` may lead to numerically more robust solutions.
-

8.4.6 Randomization

A mixed-integer optimizer is usually prone to performance variability, meaning that a small change in either

- problem data, or
- computer hardware, or
- algorithmic parameters

can lead to significant changes in solution time, due to different solution paths in the Branch-and-cut tree. In extreme cases the exact same problem can vary from being solvable in less than a second to seemingly unsolvable in any reasonable amount of time on a different computer.

One practical implication of this is that one should ideally verify whether a seemingly beneficial set of parameters, established experimentally on a single problem, is still beneficial (on average) on a larger set of problems from the same problem class. This protects against making parameter changes that had positive effects only due to random effects on that single problem.

In the absence of a large set of test problems, one may also change the random seed of the optimizer to a series of different values in order to hedge against drawing such wrong conclusions regarding parameters. The random seed, accessible through `MSK_IPAR_MIO_SEED`, impacts for example random tie-breaking in many of the mixed-integer optimizer's components. Changing the random seed can be combined with a permutation of the problem data to further incite randomness, accessible through the parameter `MSK_IPAR_MIO_DATA_PERMUTATION_METHOD`.

8.4.7 Further performance tweaks

In addition to what was mentioned previously, there may be other ways to speed up the solution of a given mixed-integer problem. For example, there are further user parameters affecting some algorithmic settings in the mixed-integer optimizer. As mentioned above, default parameter values are optimized to work well on average, but on individual problems they may be adjusted.

MIO performance tweaks: miscellaneous

- While exploring the tree, the optimizer applies certain strategies to decide which fractional variable to branch on, see Sec. 8.4.1. The chosen strategy can have a big impact on performance, and may be controlled with `MSK_IPAR_MIO_VAR_SELECTION`.
 - Similarly, the strategy to chose the next node to explore in the tree is controlled with `MSK_IPAR_MIO_NODE_SELECTION`.
 - The optimizer employs specialized techniques to learn from infeasible nodes and use that knowledge to avoid creating similar nodes in other parts of the tree. The effort spent here can be influenced with `MSK_IPAR_MIO_DUAL_RAY_ANALYSIS_LEVEL` and `MSK_IPAR_MIO_CONFLICT_ANALYSIS_LEVEL`.
 - When relaxations in the tree are linear optimization problems (e.g., in MILO or when solving MICO probelms with the Outer-Approximation method), it is usually best to employ the dual simplex method for their solution. In rare cases the primal simplex method may actually be the better choice, and this can be set with the parameter `MSK_IPAR_MIO_NODE_OPTIMIZER`.
 - Some problems are numerically more challenging than others, for example if the ratio between the smallest and the largest involved coefficients is large, say $\geq 1e9$. An indication of numerical issues are, for example, large violations in the final solution, observable in the solution summery of the log output, see Sec. 6.1.3. Similarly, a problem that is known to be feasible by the user may be declared infeasible by the optimizer. In such cases it is usually best to try to rescale the model. Otherwise, the mixed-integer optimizer can be instructed to be more cautious regarding numerics with the parameter `MSK_IPAR_MIO_NUMERICAL_EMPHASIS_LEVEL`. This may in turn be at the cost of solution speed though.
 - Improve the formulation: A MIO problem may be impossible to solve in one form and quite easy in another form. However, it is beyond the scope of this manual to discuss good formulations for mixed-integer problems. For discussions on this topic see for example [Wol98].
-

Chapter 9

Additional features

In this section we describe additional features and tools which enable more detailed analysis of optimization problems with **MOSEK**.

9.1 Problem Analyzer

The problem analyzer prints a survey of the structure of the problem, with information about linear constraints and objective, quadratic constraints, conic constraints and variables.

In the initial stages of model formulation the problem analyzer may be used as a quick way of verifying that the model has been built or imported correctly. In later stages it can help revealing special structures within the model that may be used to tune the optimizer's performance or to identify the causes of numerical difficulties.

The problem analyzer is run from the command line using the `-anapro` argument and produces output similar to the following (this is the problem analyzer's survey of the `aflow30a` problem from the MIPLIB 2003 collection.)

```

The survey is divided into a structural and numerical report. The content should be self-explanatory.

9.2 Automatic Repair of Infeasible Problems

MOSEK provides an automatic repair tool for infeasible linear problems which we cover in this section. Note that most infeasible models are so due to bugs which can (and should) be more reliably fixed manually, using the knowledge of the model structure. We discuss this approach in Sec. 6.3.

9.2.1 Automatic repair

The main idea can be described as follows. Consider the linear optimization problem with m constraints and n variables

$$\begin{array}{ll} \text{minimize} & c^T x + c^f \\ \text{subject to} & \begin{array}{lcl} l^c & \leq & Ax \\ l^x & \leq & x \end{array} \leq u^c, \\ & & u^x, \end{array}$$

which is assumed to be infeasible.

One way of making the problem feasible is to reduce the lower bounds and increase the upper bounds. If the change is sufficiently large the problem becomes feasible. Now an obvious idea is to compute the optimal relaxation by solving an optimization problem. The problem

$$\begin{array}{ll} \text{minimize} & p(v_l^c, v_u^c, v_l^x, v_u^x) \\ \text{subject to} & \begin{array}{lcl} l^c - v_l^c & \leq & Ax \\ l^x - v_l^x & \leq & x \end{array} \leq u^c + v_u^c, \\ & & v_l^c, v_u^c, v_l^x, v_u^x \geq 0 \end{array} \quad (9.1)$$

does exactly that. The additional variables $(v_l^c)_i$, $(v_u^c)_i$, $(v_l^x)_j$ and $(v_u^x)_j$ are *elasticity* variables because they allow a constraint to be violated and hence add some elasticity to the problem. For instance, the elasticity variable $(v_l^c)_i$ controls how much the lower bound $(l^c)_i$ should be relaxed to make the problem feasible. Finally, the so-called penalty function

$$p(v_l^c, v_u^c, v_l^x, v_u^x)$$

is chosen so it penalizes changes to bounds. Given the weights

- $w_l^c \in \mathbb{R}^m$ (associated with l^c),
- $w_u^c \in \mathbb{R}^m$ (associated with u^c),
- $w_l^x \in \mathbb{R}^n$ (associated with l^x),
- $w_u^x \in \mathbb{R}^n$ (associated with u^x),

a natural choice is

$$p(v_l^c, v_u^c, v_l^x, v_u^x) = (w_l^c)^T v_l^c + (w_u^c)^T v_u^c + (w_l^x)^T v_l^x + (w_u^x)^T v_u^x.$$

Hence, the penalty function $p()$ is a weighted sum of the elasticity variables and therefore the problem (9.1) keeps the amount of relaxation at a minimum. Please observe that

- the problem (9.1) is always feasible.
- a negative weight implies problem (9.1) is unbounded. For this reason if the value of a weight is negative **MOSEK** fixes the associated elasticity variable to zero. Clearly, if one or more of the weights are negative, it may imply that it is not possible to repair the problem.

A simple choice of weights is to set them all to 1, but of course that does not take into account that constraints may have different importance.

Caveats

Observe if the infeasible problem

$$\begin{aligned} & \text{minimize} && x + z \\ & \text{subject to} && x = -1, \\ & && x \geq 0 \end{aligned}$$

is repaired then it will become unbounded. Hence, a repaired problem may not have an optimal solution.

Another and more important caveat is that only a minimal repair is performed i.e. the repair that barely makes the problem feasible. Hence, the repaired problem is barely feasible and that sometimes makes the repaired problem hard to solve.

Using the automatic repair tool

In this subsection we consider an infeasible linear optimization example:

$$\begin{aligned} & \text{minimize} && -10x_1 - 9x_2, \\ & \text{subject to} && 7/10x_1 + 1x_2 \leq 630, \\ & && 1/2x_1 + 5/6x_2 \leq 600, \\ & && 1x_1 + 2/3x_2 \leq 708, \\ & && 1/10x_1 + 1/4x_2 \leq 135, \\ & && x_1, \quad x_2 \geq 0, \\ & && x_2 \geq 650. \end{aligned} \tag{9.2}$$

The problem (9.2) is contained in a file:

Listing 9.1: Problem (9.2) in LP format.

```
minimize
  obj: - 10 x1 - 9 x2
st
  c1: + 7e-01 x1 + x2 <= 630
  c2: + 5e-01 x1 + 8.333333333e-01 x2 <= 600
  c3: + x1 + 6.6666667e-01 x2 <= 708
  c4: + 1e-01 x1 + 2.5e-01 x2 <= 135
bounds
  x2 >= 650
end
```

Given the assumption that all weights are 1 the command

```
mosek -primalrepair -d MSK_IPAR_LOG_FEAS_REPAIR 3 feasrepair.lp
```

will form the repaired problem and solve it. The parameter `MSK_IPAR_LOG_FEAS_REPAIR` controls the amount of log output from the repair. A value of 2 causes the optimal repair to printed out. The output from running the above command is:

```

```

In this case the optimal repair it is to increase the upper bound on constraint c4 by 22.5 and decrease the lower bound on variable x2 by 20.

9.3 Sensitivity Analysis

Given an optimization problem it is often useful to obtain information about how the optimal objective value changes when the problem parameters are perturbed. E.g, assume that a bound represents the capacity of a machine. Now, it may be possible to expand the capacity for a certain cost and hence it is worthwhile knowing what the value of additional capacity is. This is precisely the type of questions the sensitivity analysis deals with.

Analyzing how the optimal objective value changes when the problem data is changed is called *sensitivity analysis*.

References

The book [Chvatal83] discusses the classical sensitivity analysis in Chapter 10 whereas the book [RTV97] presents a modern introduction to sensitivity analysis. Finally, it is recommended to read the short paper [Wal00] to avoid some of the pitfalls associated with sensitivity analysis.

Warning: Currently, sensitivity analysis is only available for continuous linear optimization problems. Moreover, **MOSEK** can only deal with perturbations of bounds and objective function coefficients.

9.3.1 Sensitivity Analysis for Linear Problems

The Optimal Objective Value Function

Assume that we are given the problem

$$\begin{aligned} z(l^c, u^c, l^x, u^x, c) &= \text{minimize} && c^T x \\ &\text{subject to} && l^c \leq Ax \leq u^c, \\ &&& l^x \leq x \leq u^x, \end{aligned} \tag{9.3}$$

and we want to know how the optimal objective value changes as l_i^c is perturbed. To answer this question we define the perturbed problem for l_i^c as follows

$$\begin{aligned} f_{l_i^c}(\beta) &= \text{minimize} && c^T x \\ &\text{subject to} && l^c + \beta e_i \leq Ax \leq u^c, \\ &&& l^x \leq x \leq u^x, \end{aligned}$$

where e_i is the i -th column of the identity matrix. The function

$$f_{l_i^c}(\beta) \tag{9.4}$$

shows the optimal objective value as a function of β . Please note that a change in β corresponds to a perturbation in l_i^c and hence (9.4) shows the optimal objective value as a function of varying l_i^c with the other bounds fixed.

It is possible to prove that the function (9.4) is a piecewise linear and convex function, i.e. its graph may look like in Fig. 9.1 and Fig. 9.2.

Clearly, if the function $f_{l_i^c}(\beta)$ does not change much when β is changed, then we can conclude that the optimal objective value is insensitive to changes in l_i^c . Therefore, we are interested in the rate of change in $f_{l_i^c}(\beta)$ for small changes in β — specifically the gradient

$$f'_{l_i^c}(0),$$

which is called the *shadow price* related to l_i^c . The shadow price specifies how the objective value changes for small changes of β around zero. Moreover, we are interested in the *linearity interval*

$$\beta \in [\beta_1, \beta_2]$$

for which

$$f'_{l_i^c}(\beta) = f'_{l_i^c}(0).$$

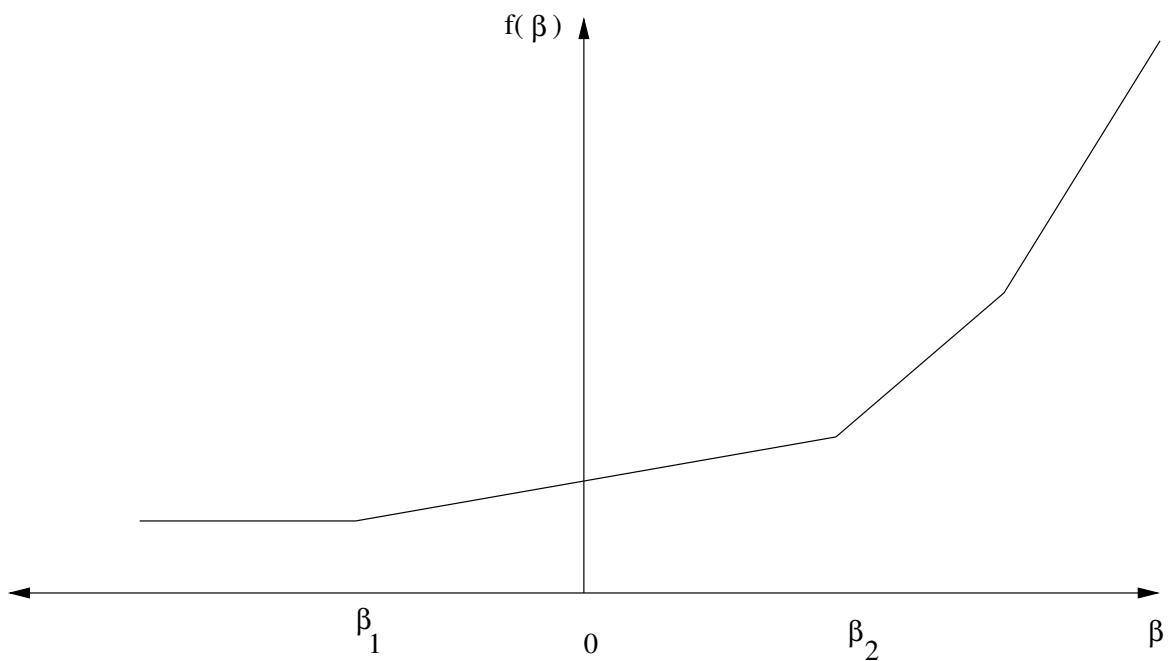

Fig. 9.1: $\beta = 0$ is in the interior of linearity interval.

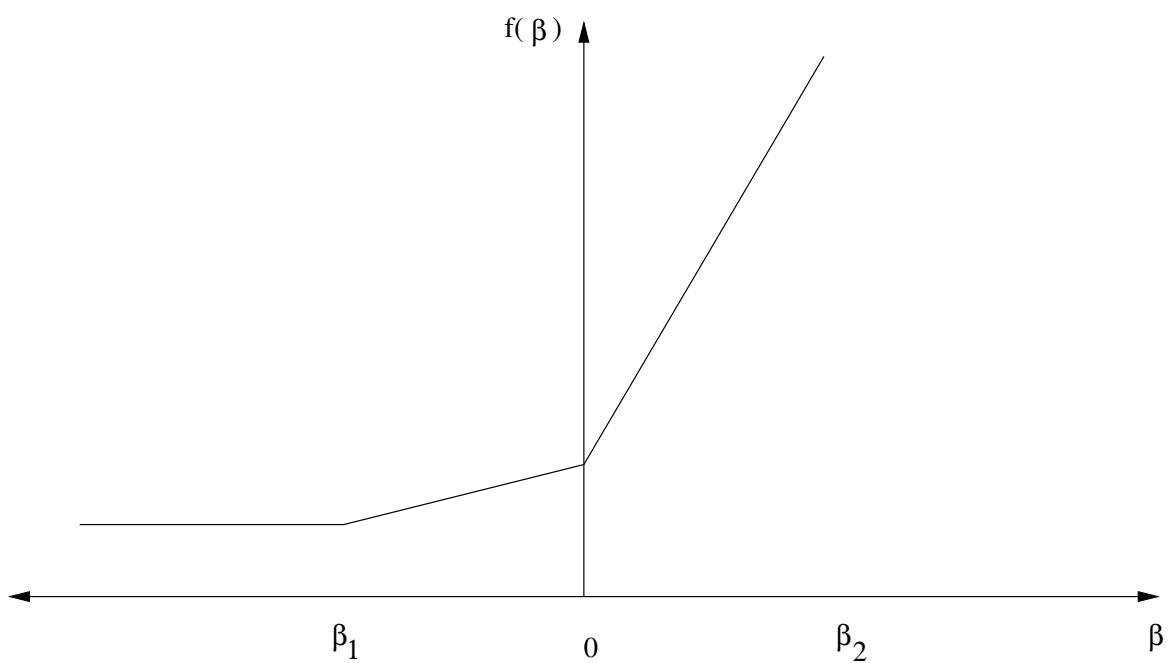

Fig. 9.2: $\beta = 0$ is a breakpoint.

Since $f_{l_i^c}$ is not a smooth function $f'_{l_i^c}$ may not be defined at 0, as illustrated in Fig. 9.2. In this case we can define a left and a right shadow price and a left and a right linearity interval.

The function $f_{l_i^c}$ considered only changes in l_i^c . We can define similar functions for the remaining parameters of the z defined in (9.3) as well:

$$\begin{aligned} f_{l_i^c}(\beta) &= z(l^c + \beta e_i, u^c, l^x, u^x, c), \quad i = 1, \dots, m, \\ f_{u_i^c}(\beta) &= z(l^c, u^c + \beta e_i, l^x, u^x, c), \quad i = 1, \dots, m, \\ f_{l_j^x}(\beta) &= z(l^c, u^c, l^x + \beta e_j, u^x, c), \quad j = 1, \dots, n, \\ f_{u_j^x}(\beta) &= z(l^c, u^c, l^x, u^x + \beta e_j, c), \quad j = 1, \dots, n, \\ f_{c_j}(\beta) &= z(l^c, u^c, l^x, u^x, c + \beta e_j), \quad j = 1, \dots, n. \end{aligned}$$

Given these definitions it should be clear how linearity intervals and shadow prices are defined for the parameters u_i^c etc.

Equality Constraints

In **MOSEK** a constraint can be specified as either an equality constraint or a ranged constraint. If some constraint e_i^c is an equality constraint, we define the optimal value function for this constraint as

$$f_{e_i^c}(\beta) = z(l^c + \beta e_i, u^c + \beta e_i, l^x, u^x, c)$$

Thus for an equality constraint the upper and the lower bounds (which are equal) are perturbed simultaneously. Therefore, **MOSEK** will handle sensitivity analysis differently for a ranged constraint with $l_i^c = u_i^c$ and for an equality constraint.

The Basis Type Sensitivity Analysis

The classical sensitivity analysis discussed in most textbooks about linear optimization, e.g. [Chvatal83], is based on an optimal basis. This method may produce misleading results [RTV97] but is computationally cheap. This is the type of sensitivity analysis implemented in **MOSEK**.

We will now briefly discuss the basis type sensitivity analysis. Given an optimal basic solution which provides a partition of variables into basic and non-basic variables, the basis type sensitivity analysis computes the linearity interval $[\beta_1, \beta_2]$ so that the basis remains optimal for the perturbed problem. A shadow price associated with the linearity interval is also computed. However, it is well-known that an optimal basic solution may not be unique and therefore the result depends on the optimal basic solution employed in the sensitivity analysis. If the optimal objective value function has a breakpoint for $\beta = 0$ then the basis type sensitivity method will only provide a subset of either the left or the right linearity interval.

In summary, the basis type sensitivity analysis is computationally cheap but does not provide complete information. Hence, the results of the basis type sensitivity analysis should be used with care.

Example: Sensitivity Analysis

As an example we will use the following transportation problem. Consider the problem of minimizing the transportation cost between a number of production plants and stores. Each plant supplies a number of goods and each store has a given demand that must be met. Supply, demand and cost of transportation per unit are shown in Fig. 9.3.

If we denote the number of transported goods from location i to location j by x_{ij} , problem can be formulated as the linear optimization problem of minimizing

$$1x_{11} + 2x_{12} + 5x_{23} + 2x_{24} + 1x_{31} + 2x_{33} + 1x_{34}$$

subject to

$$\begin{array}{rclclclclclcl} x_{11} & + & x_{12} & & & & & & & & & \leq & 400, \\ & & x_{23} & + & x_{24} & & & & & & & \leq & 1200, \\ x_{11} & & & & & x_{31} & + & x_{33} & + & x_{34} & \leq & 1000, \\ & x_{12} & & & & + & x_{31} & & & & = & 800, \\ & & x_{23} & + & & & x_{33} & & & & = & 100, \\ x_{11}, & x_{12}, & x_{23}, & x_{24}, & x_{31}, & x_{33}, & x_{34} & & & & & = & 500, \\ & & & & & & & & & & & & = & 500, \\ & & & & & & & & & & & & \geq & 0. \end{array} \tag{9.5}$$

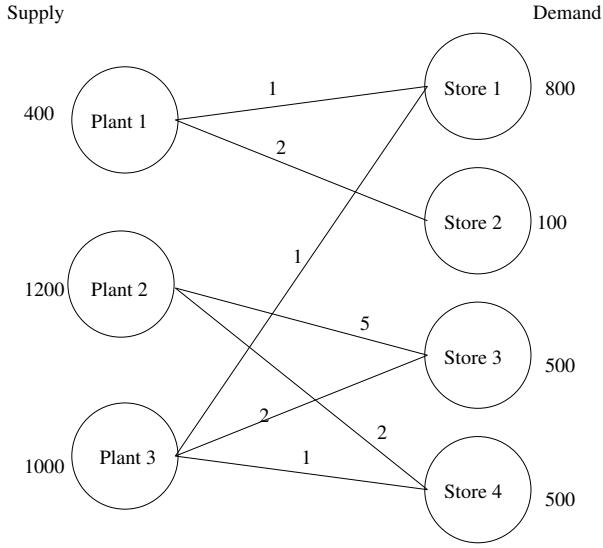

Fig. 9.3: Supply, demand and cost of transportation.

The sensitivity parameters are shown in [Table 9.1](#) and [Table 9.2](#).

Table 9.1: Ranges and shadow prices related to bounds on constraints and variables.

x_{34}	-0.000000	500.00	2.00	2.00

Table 9.2: Ranges and shadow prices related to the objective coefficients.

Var.	β_1	β_2	σ_1	σ_2
c_1	$-\infty$	3.00	300.00	300.00
c_2	$-\infty$	∞	100.00	100.00
c_3	-2.00	∞	0.00	0.00
c_4	$-\infty$	2.00	500.00	500.00
c_5	-3.00	∞	500.00	500.00
c_6	$-\infty$	2.00	500.00	500.00
c_7	-2.00	∞	0.00	0.00

Examining the results from the sensitivity analysis we see that for constraint number 1 we have $\sigma_1 = 3$ and $\beta_1 = -300$, $\beta_2 = 0$.

If the upper bound on constraint 1 is decreased by

$$\beta \in [0, 300]$$

then the optimal objective value will increase by the value

$$\sigma_1\beta = 3\beta.$$

9.3.2 Sensitivity Analysis with MOSEK

A sensitivity analysis can be performed with the **MOSEK** command line tool specifying the option `-sen`, e.g.

```
mosek myproblem.mps -sen sensitivity.ssp
```

where `sensitivity.ssp` is a file in the format described in the next section. The `ssp` file describes which parts of the problem the sensitivity analysis should be performed on, see Sec. 9.3.2.

By default results are written to a file named `myproblem.sen`. If necessary, this file name can be changed by setting the `MSK_SPAR_SENSITIVITY_RES_FILE_NAME` parameter.

Sensitivity Analysis Specification File

MOSEK employs an MPS-like file format to specify on which model parameters the sensitivity analysis should be performed. The format of the sensitivity specification file is shown in Listing 9.2, where capitalized names are keywords, and names in brackets are names of the constraints and variables to be included in the analysis.

Listing 9.2: Sensitivity analysis file specification.

```
BOUNDS CONSTRAINTS
U|L|LU [cname1]
U|L|LU [cname2]-[cname3]
BOUNDS VARIABLES
U|L|LU [vname1]
U|L|LU [vname2]-[vname3]
OBJECTIVE VARIABLES
[vname1]
[vname2]-[vname3]
```

The sensitivity specification file has three sections, i.e.

- **BOUNDS CONSTRAINTS:** Specifies on which bounds on constraints the sensitivity analysis should be performed.
- **BOUNDS VARIABLES:** Specifies on which bounds on variables the sensitivity analysis should be performed.
- **OBJECTIVE VARIABLES:** Specifies on which objective coefficients the sensitivity analysis should be performed.

A line in the body of a section must begin with a whitespace. In the **BOUNDS** sections one of the keys L, U, and LU must appear next. These keys specify whether the sensitivity analysis is performed on the lower bound, on the upper bound, or on both the lower and the upper bound respectively. Next, a single constraint (variable) or range of constraints (variables) is specified.

Recall from Sec. 9.3.1 that equality constraints are handled in a special way. Sensitivity analysis of an equality constraint can be specified with either L, U, or LU, all indicating the same, namely that upper and lower bounds (which are equal) are perturbed simultaneously.

As an example consider

```

BOUNDS CONSTRAINTS
L "cons1"
U "cons2"
LU "cons3"- "cons6"

```

which requests that sensitivity analysis is performed on the lower bound of the constraint named `cons1`, on the upper bound of the constraint named `cons2`, and on both lower and upper bound on the constraints named `cons3` to `cons6`.

It is allowed to use indexes instead of names, for instance

```

BOUNDS CONSTRAINTS
L "cons1"
U 2
LU 3 - 6

```

The character * indicates that the line contains a comment and is ignored.

Example: Sensitivity Analysis from Command Line

As an example consider problem (9.5): the sensitivity file shown below (included in the distribution among the examples).

Listing 9.3: Sensitivity file for problem (9.5).

```

* Comment 1

BOUNDS CONSTRAINTS
U "c1"          * Analyze upper bound for constraints named c1
U 2             * Analyze upper bound for constraints with index 2
U 3-5           * Analyze upper bound for constraint with index in interval [3:5]

VARIABLES CONSTRAINTS
L 2-4           * This section specifies which bounds on variables should be analyzed.
→
L "x11"

OBJECTIVE CONSTRAINTS
"x11"           * This section specifies which objective coefficients should be
→analysed.
2

```

The command

```
mosek transport.lp -sen sensitivity.ssp
```

produces the output file as follow

Listing 9.4: Results of sensitivity analysis

Controlling Log Output

Setting the parameter `MSK_IPAR_LOG_SENSITIVITY` to 1 or 0 (default) controls whether or not the results from sensitivity calculations are printed to the message stream.

The parameter `MSK_IPAR_LOG_SENSITIVITY_OPT` controls the amount of debug information on internal calculations from the sensitivity analysis.

10.2 Parameters (alphabetical list sorted by type)

- *Double parameters*
- *Integer parameters*
- *String parameters*

10.2.1 Double parameters

`MSK_DPAR_ANA_SOL_INFEAS_TOL`

If a constraint violates its bound with an amount larger than this value, the constraint name, index and violation will be printed by the solution analyzer.

Default

1e-6

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_ANA_SOL_INFEAS_TOL 1e-6 file
```

Groups

Analysis

MSK_DPAR_BASIS_REL_TOL_S

Maximum relative dual bound violation allowed in an optimal basic solution.

Default

1.0e-12

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_BASIS_REL_TOL_S 1.0e-12 file
```

Groups

Simplex optimizer, Termination criteria

MSK_DPAR_BASIS_TOL_S

Maximum absolute dual bound violation in an optimal basic solution.

Default

1.0e-6

Accepted

[1.0e-9; +inf]

Example

```
mosek -d MSK_DPAR_BASIS_TOL_S 1.0e-6 file
```

Groups

Simplex optimizer, Termination criteria

MSK_DPAR_BASIS_TOL_X

Maximum absolute primal bound violation allowed in an optimal basic solution.

Default

1.0e-6

Accepted

[1.0e-9; +inf]

Example

```
mosek -d MSK_DPAR_BASIS_TOL_X 1.0e-6 file
```

Groups

Simplex optimizer, Termination criteria

MSK_DPAR_DATA_SYM_MAT_TOL

Absolute zero tolerance for elements in symmetric matrices. If any value in a symmetric matrix is smaller than this parameter in absolute terms **MOSEK** will treat the values as zero and generate a warning.

Default

1.0e-12

Accepted

[1.0e-16; 1.0e-6]

Example

```
mosek -d MSK_DPAR_DATA_SYM_MAT_TOL 1.0e-12 file
```

Groups

Data check

MSK_DPAR_DATA_SYM_MAT_TOL_HUGE

An element in a symmetric matrix which is larger than this value in absolute size causes an error.

Default

1.0e20

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_SYM_MAT_TOL_HUGE 1.0e20 file
```

Groups

Data check

MSK_DPAR_DATA_SYM_MAT_TOL_LARGE

An element in a symmetric matrix which is larger than this value in absolute size causes a warning message to be printed.

Default

1.0e10

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_SYM_MAT_TOL_LARGE 1.0e10 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_AIJ_HUGE

An element in A which is larger than this value in absolute size causes an error.

Default

1.0e20

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_AIJ_HUGE 1.0e20 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_AIJ_LARGE

An element in A which is larger than this value in absolute size causes a warning message to be printed.

Default

1.0e10

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_AIJ_LARGE 1.0e10 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_BOUND_INF

Any bound which in absolute value is greater than this parameter is considered infinite.

Default

1.0e16

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_BOUND_INF 1.0e16 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_BOUND_WRN

If a bound value is larger than this value in absolute size, then a warning message is issued.

Default

1.0e8

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_BOUND_WRN 1.0e8 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_C_HUGE

An element in c which is larger than the value of this parameter in absolute terms is considered to be huge and generates an error.

Default

1.0e16

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_C_HUGE 1.0e16 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_CJ_LARGE

An element in c which is larger than this value in absolute terms causes a warning message to be printed.

Default

1.0e8

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_CJ_LARGE 1.0e8 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_QIJ

Absolute zero tolerance for elements in Q matrices.

Default

1.0e-16

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_QIJ 1.0e-16 file
```

Groups

Data check

MSK_DPAR_DATA_TOL_X

Zero tolerance for constraints and variables i.e. if the distance between the lower and upper bound is less than this value, then the lower and upper bound is considered identical.

Default

1.0e-8

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_DATA_TOL_X 1.0e-8 file
```

Groups

Data check

MSK_DPAR_FOLDING_TOL_EQ

Tolerance for coefficient equality during folding.

Default

1e-9

Accepted

[0.0; +inf]

Example

```

```

Groups

Presolve

MSK_DPAR_INTPNT_CO_TOL_DFEAS

Dual feasibility tolerance used by the interior-point optimizer for conic problems.

Default

1.0e-8

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_CO_TOL_DFEAS 1.0e-8 file
```

See also

MSK_DPAR_INTPNT_CO_TOL_NEAR_REL

Groups

Interior-point method, Termination criteria, Conic interior-point method

MSK_DPAR_INTPNT_CO_TOL_INFEAS

Infeasibility tolerance used by the interior-point optimizer for conic problems. Controls when the interior-point optimizer declares the model primal or dual infeasible. A small number means the optimizer gets more conservative about declaring the model infeasible.

Default

1.0e-12

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_CO_TOL_INFEAS 1.0e-12 file
```

Groups

Interior-point method, Termination criteria, Conic interior-point method

MSK_DPAR_INTPNT_CO_TOL_MU_RED

Relative complementarity gap tolerance used by the interior-point optimizer for conic problems.

Default

1.0e-8

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_CO_TOL_MU_RED 1.0e-8 file
```

Groups

Interior-point method, Termination criteria, Conic interior-point method

`MSK_DPAR_INTPNT_CO_TOL_NEAR_REL`

Optimality tolerance used by the interior-point optimizer for conic problems. If **MOSEK** cannot compute a solution that has the prescribed accuracy then it will check if the solution found satisfies the termination criteria with all tolerances multiplied by the value of this parameter. If yes, then the solution is also declared optimal.

Default

1000

Accepted

[1.0; +inf]

Example

```
mosek -d MSK_DPAR_INTPNT_CO_TOL_NEAR_REL 1000 file
```

Groups

Interior-point method, Termination criteria, Conic interior-point method

`MSK_DPAR_INTPNT_CO_TOL_PFEAS`

Primal feasibility tolerance used by the interior-point optimizer for conic problems.

Default

1.0e-8

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_CO_TOL_PFEAS 1.0e-8 file
```

[MSK_DPAR_INTPNT_QO_TOL_NEAR_REL](#)

Groups

Interior-point method, Termination criteria

MSK_DPAR_INTPNT_TOL_DFEAS

Dual feasibility tolerance used by the interior-point optimizer for linear problems.

Default

1.0e-8

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_DFEAS 1.0e-8 file
```

Groups

Interior-point method, Termination criteria

MSK_DPAR_INTPNT_TOL_DSAFE

Controls the initial dual starting point used by the interior-point optimizer. If the interior-point optimizer converges slowly and/or the constraint or variable bounds are very large, then it might be worthwhile to increase this value.

Default

1.0

Accepted

[1.0e-4; +inf]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_DSAFE 1.0 file
```

Groups

Interior-point method

MSK_DPAR_INTPNT_TOL_INFEAS

Infeasibility tolerance used by the interior-point optimizer for linear problems. Controls when the interior-point optimizer declares the model primal or dual infeasible. A small number means the optimizer gets more conservative about declaring the model infeasible.

Default

1.0e-10

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_INFEAS 1.0e-10 file
```

Groups

Interior-point method, Termination criteria

MSK_DPAR_INTPNT_TOL_MU_RED

Relative complementarity gap tolerance used by the interior-point optimizer for linear problems.

Default

1.0e-16

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_MU_RED 1.0e-16 file
```

Groups*Interior-point method, Termination criteria***MSK_DPAR_INTPNT_TOL_PATH**

Controls how close the interior-point optimizer follows the central path. A large value of this parameter means the central path is followed very closely. On numerically unstable problems it may be worthwhile to increase this parameter.

Default

1.0e-8

Accepted

[0.0; 0.9999]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_PATH 1.0e-8 file
```

Groups*Interior-point method***MSK_DPAR_INTPNT_TOL_PFEAS**

Primal feasibility tolerance used by the interior-point optimizer for linear problems.

Default

1.0e-8

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_PFEAS 1.0e-8 file
```

Groups*Interior-point method, Termination criteria***MSK_DPAR_INTPNT_TOL_PSAFE**

Controls the initial primal starting point used by the interior-point optimizer. If the interior-point optimizer converges slowly and/or the constraint or variable bounds are very large, then it may be worthwhile to increase this value.

Default

1.0

Accepted

[1.0e-4; +inf]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_PSAFE 1.0 file
```

Groups*Interior-point method***MSK_DPAR_INTPNT_TOL_REL_GAP**

Relative gap termination tolerance used by the interior-point optimizer for linear problems.

Default

1.0e-8

Accepted

[1.0e-14; +inf]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_REL_GAP 1.0e-8 file
```

Groups*Termination criteria, Interior-point method*

`MSK_DPAR_INTPNT_TOL_REL_STEP`

Relative step size to the boundary for linear and quadratic optimization problems.

Default

0.9999

Accepted

[1.0e-4; 0.999999]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_REL_STEP 0.9999 file
```

Groups

Interior-point method

`MSK_DPAR_INTPNT_TOL_STEP_SIZE`

Minimal step size tolerance. If the step size falls below the value of this parameter, then the interior-point optimizer assumes that it is stalled. In other words the interior-point optimizer does not make any progress and therefore it is better to stop.

Default

1.0e-6

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_INTPNT_TOL_STEP_SIZE 1.0e-6 file
```

Groups

Interior-point method

`MSK_DPAR_LOWER_OBJ_CUT`

If either a primal or dual feasible solution is found proving that the optimal objective value is outside the interval [`MSK_DPAR_LOWER_OBJ_CUT`, `MSK_DPAR_UPPER_OBJ_CUT`], then **MOSEK** is terminated.

Default

-INFINITY

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_DPAR_LOWER_OBJ_CUT -INFINITY file
```

See also

`MSK_DPAR_LOWER_OBJ_CUTFINITE_TRH`

Groups

Termination criteria

`MSK_DPAR_LOWER_OBJ_CUTFINITE_TRH`

If the lower objective cut is less than the value of this parameter value, then the lower objective cut i.e. `MSK_DPAR_LOWER_OBJ_CUT` is treated as $-\infty$.

Default

-0.5e30

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_DPAR_LOWER_OBJ_CUTFINITE_TRH -0.5e30 file
```

Groups

Termination criteria

MSK_DPAR_MIO_CLIQUE_TABLE_SIZE_FACTOR

Controls the maximum size of the clique table as a factor of the number of nonzeros in the A matrix. A negative value implies **MOSEK** decides.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_DPAR_MIO_CLIQUE_TABLE_SIZE_FACTOR -1 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_DJC_MAX_BIGM

Maximum allowed big-M value when reformulating disjunctive constraints to linear constraints. Higher values make it more likely that a disjunction is reformulated to linear constraints, but also increase the risk of numerical problems.

Default

1.0e6

Accepted

[0; +inf]

Example

```
mosek -d MSK_DPAR_MIO_DJC_MAX_BIGM 1.0e6 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_MAX_TIME

This parameter limits the maximum time spent by the mixed-integer optimizer (in seconds). A negative number means infinity.

Default

-1.0

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_DPAR_MIO_MAX_TIME -1.0 file
```

Groups

Mixed-integer optimization, Termination criteria

MSK_DPAR_MIO_REL_GAP_CONST

This value is used to compute the relative gap for the solution to a mixed-integer optimization problem.

Default

1.0e-10

Accepted

[1.0e-15; +inf]

Example

```
mosek -d MSK_DPAR_MIO_REL_GAP_CONST 1.0e-10 file
```

Groups

Mixed-integer optimization, Termination criteria

MSK_DPAR_MIO_TOL_ABS_GAP

Absolute optimality tolerance employed by the mixed-integer optimizer.

Default

0.0

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_MIO_TOL_ABS_GAP 0.0 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_TOL_ABS_RELAX_INT

Absolute integer feasibility tolerance. If the distance to the nearest integer is less than this tolerance then an integer constraint is assumed to be satisfied.

Default

1.0e-5

Accepted

[1e-9; +inf]

Example

```
mosek -d MSK_DPAR_MIO_TOL_ABS_RELAX_INT 1.0e-5 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_TOL_FEAS

Feasibility tolerance for mixed integer solver.

Default

1.0e-6

Accepted

[1e-9; 1e-3]

Example

```
mosek -d MSK_DPAR_MIO_TOL_FEAS 1.0e-6 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_TOL_REL_DUAL_BOUND_IMPROVEMENT

If the relative improvement of the dual bound is smaller than this value, the solver will terminate the root cut generation. A value of 0.0 means that the value is selected automatically.

Default

0.0

Accepted

[0.0; 1.0]

Example

```
mosek -d MSK_DPAR_MIO_TOL_REL_DUAL_BOUND_IMPROVEMENT 0.0 file
```

Groups

Mixed-integer optimization

MSK_DPAR_MIO_TOL_REL_GAP

Relative optimality tolerance employed by the mixed-integer optimizer.

Default

1.0e-4

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_MIO_TOL_REL_GAP 1.0e-4 file
```

Groups

Mixed-integer optimization, Termination criteria

MSK_DPAR_OPTIMIZER_MAX_TICKS

CURRENTLY NOT IN USE.

Maximum amount of ticks the optimizer is allowed to spent on the optimization. A negative number means infinity.

Default

-1.0

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_DPAR_OPTIMIZER_MAX_TICKS -1.0 file
```

Groups

Termination criteria

MSK_DPAR_OPTIMIZER_MAX_TIME

Maximum amount of time the optimizer is allowed to spent on the optimization (in seconds). A negative number means infinity.

Default

-1.0

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_DPAR_OPTIMIZER_MAX_TIME -1.0 file
```

Groups

Termination criteria

MSK_DPAR_PRESOLVE_TOL_ABS_LINDEP

Absolute tolerance employed by the linear dependency checker.

Default

1.0e-6

Accepted

[0.0; $+\infty$]

Example

```
mosek -d MSK_DPAR_PRESOLVE_TOL_ABS_LINDEP 1.0e-6 file
```

Groups

Presolve

MSK_DPAR_PRESOLVE_TOL_PRIMAL_INFEAS_PERTURBATION

The presolve is allowed to perturb a bound on a constraint or variable by this amount if it removes an infeasibility.

Default

1.0e-6

Accepted

[0.0; $+\infty$]

Example

```
mosek -d MSK_DPAR_PRESOLVE_TOL_PRIMAL_INFEAS_PERTURBATION 1.0e-6 file
```

Groups

Presolve

MSK_DPAR_PRESOLVE_TOL_REL_LINDEP

Relative tolerance employed by the linear dependency checker.

Default

1.0e-10

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_PRESOLVE_TOL_REL_LINDEP 1.0e-10 file
```

Groups*Presolve***MSK_DPAR_PRESOLVE_TOL_S**

Absolute zero tolerance employed for s_i in the presolve.

Default

1.0e-8

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_PRESOLVE_TOL_S 1.0e-8 file
```

Groups*Presolve***MSK_DPAR_PRESOLVE_TOL_X**

Absolute zero tolerance employed for x_j in the presolve.

Default

1.0e-8

Accepted

[0.0; +inf]

Example

```
mosek -d MSK_DPAR_PRESOLVE_TOL_X 1.0e-8 file
```

Groups*Presolve***MSK_DPAR_QCQO_REFORMULATE_REL_DROP_TOL**

This parameter determines when columns are dropped in incomplete Cholesky factorization during reformulation of quadratic problems.

Default

1e-15

Accepted

[0; +inf]

Example

```
mosek -d MSK_DPAR_QCQO_REFORMULATE_REL_DROP_TOL 1e-15 file
```

Groups*Interior-point method***MSK_DPAR_SEMIDEFINITE_TOL_APPROX**

Tolerance to define a matrix to be positive semidefinite.

Default

1.0e-10

Accepted

[1.0e-15; +inf]

Example

```
mosek -d MSK_DPAR_SEMIDEFINITE_TOL_APPROX 1.0e-10 file
```

Groups*Data check*

MSK_DPAR_SIM_LU_TOL_REL_PIV

Relative pivot tolerance employed when computing the LU factorization of the basis in the simplex optimizers and in the basis identification procedure. A value closer to 1.0 generally improves numerical stability but typically also implies an increase in the computational work.

Default

0.01

Accepted

[1.0e-6; 0.999999]

Example

```
mosek -d MSK_DPAR_SIM_LU_TOL_REL_PIV 0.01 file
```

Groups

Basis identification, Simplex optimizer

MSK_DPAR_SIM_PRECISION_SCALING_EXTENDED

Experimental. Usage not recommended.

Default

2.0

Accepted

[1.0; +inf]

Example

```
mosek -d MSK_DPAR_SIM_PRECISION_SCALING_EXTENDED 2.0 file
```

Groups

Simplex optimizer, Termination criteria

MSK_DPAR_SIM_PRECISION_SCALING_NORMAL

Experimental. Usage not recommended.

Default

1.0

Accepted

[1.0; +inf]

Example

```
mosek -d MSK_DPAR_SIM_PRECISION_SCALING_NORMAL 1.0 file
```

Groups

Simplex optimizer, Termination criteria

MSK_DPAR_SIMPLEX_ABS_TOL_PIV

Absolute pivot tolerance employed by the simplex optimizers.

Default

1.0e-7

Accepted

[1.0e-12; +inf]

Example

```
mosek -d MSK_DPAR_SIMPLEX_ABS_TOL_PIV 1.0e-7 file
```

Groups

Simplex optimizer

MSK_DPAR_UPPER_OBJ_CUT

If either a primal or dual feasible solution is found proving that the optimal objective value is outside the interval [`MSK_DPAR_LOWER_OBJ_CUT`, `MSK_DPAR_UPPER_OBJ_CUT`], then **MOSEK** is terminated.

Default

INFINITY

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_DPAR_UPPER_OBJ_CUT_INFINITY file
```

See also

[MSK_DPAR_UPPER_OBJ_CUTFINITE_TRH](#)

Groups

Termination criteria

MSK_DPAR_UPPER_OBJ_CUTFINITE_TRH

If the upper objective cut is greater than the value of this parameter, then the upper objective cut [MSK_DPAR_UPPER_OBJ_CUT](#) is treated as ∞ .

Default

0.5e30

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_DPAR_UPPER_OBJ_CUTFINITE_TRH 0.5e30 file
```

Groups

Termination criteria

10.2.2 Integer parameters

MSK_IPAR_ANA_SOL_BASIS

Controls whether the basis matrix is analyzed in solution analyzer.

Default

[ON](#)

Accepted

[ON](#), [OFF](#)

Example

```
mosek -d MSK_IPAR_ANA_SOL_BASIS MSK_ON file
```

Groups

Analysis

MSK_IPAR_ANA_SOL_PRINT_VIOLATED

A parameter of the problem analyzer. Controls whether a list of violated constraints is printed. All constraints violated by more than the value set by the parameter [MSK_DPAR_ANA_SOL_INFEAS_TOL](#) will be printed.

Default

[OFF](#)

Accepted

[ON](#), [OFF](#)

Example

```
mosek -d MSK_IPAR_ANA_SOL_PRINT_VIOLATED MSK_OFF file
```

Groups

Analysis

MSK_IPAR_AUTO_SORT_A_BEFORE_OPT

Controls whether the elements in each column of A are sorted before an optimization is performed. This is not required but makes the optimization more deterministic.

Default

[OFF](#)

Accepted

[ON](#), [OFF](#)

Example

```
mosek -d MSK_IPAR_AUTO_SORT_A_BEFORE_OPT MSK_OFF file
```

Groups*Debugging***MSK_IPAR_AUTO_UPDATE_SOL_INFO**

Controls whether the solution information items are automatically updated after an optimization is performed.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_AUTO_UPDATE_SOL_INFO MSK_OFF file
```

Groups*Overall system***MSK_IPAR_BASIS_SOLVE_USE_PLUS_ONE**

If a slack variable is in the basis, then the corresponding column in the basis is a unit vector with -1 in the right position. However, if this parameter is set to *MSK_ON*, -1 is replaced by 1.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_BASIS_SOLVE_USE_PLUS_ONE MSK_OFF file
```

Groups*Simplex optimizer***MSK_IPAR_BI_CLEAN_OPTIMIZER**

Controls which simplex optimizer is used in the clean-up phase. Anything else than *MSK_OPTIMIZER_PRIMAL_SIMPLEX* or *MSK_OPTIMIZER_DUAL_SIMPLEX* is equivalent to *MSK_OPTIMIZER_FREE_SIMPLEX*.

Default*FREE***Accepted***FREE, INTPNT, CONIC, PRIMAL_SIMPLEX, DUAL_SIMPLEX, NEW_PRIMAL_SIMPLEX, NEW_DUAL_SIMPLEX, FREE_SIMPLEX, MIXED_INT***Example**

```
mosek -d MSK_IPAR_BI_CLEAN_OPTIMIZER MSK_OPTIMIZER_FREE file
```

Groups*Basis identification, Overall solver***MSK_IPAR_BI_IGNORE_MAX_ITER**

If the parameter *MSK_IPAR_INTPNT BASIS* has the value *MSK_BI_NO_ERROR* and the interior-point optimizer has terminated due to maximum number of iterations, then basis identification is performed if this parameter has the value *MSK_ON*.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_BI_IGNORE_MAX_ITER MSK_OFF file
```

Groups*Interior-point method, Basis identification*

MSK_IPAR_BI_IGNORE_NUM_ERROR

If the parameter `MSK_IPAR_INTPNT_BASIS` has the value `MSK_BI_NO_ERROR` and the interior-point optimizer has terminated due to a numerical problem, then basis identification is performed if this parameter has the value `MSK_ON`.

Default

`OFF`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_BI_IGNORE_NUM_ERROR MSK_OFF file
```

Groups

Interior-point method, Basis identification

MSK_IPAR_BI_MAX_ITERATIONS

Controls the maximum number of simplex iterations allowed to optimize a basis after the basis identification.

Default

1000000

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_BI_MAX_ITERATIONS 1000000 file
```

Groups

Basis identification, Termination criteria

MSK_IPAR_CACHE_LICENSE

Specifies if the license is kept checked out for the lifetime of the **MOSEK** environment/model/process (`MSK_ON`) or returned to the server immediately after the optimization (`MSK_OFF`).

Check-in and check-out of licenses have an overhead. Frequent communication with the license server should be avoided.

Default

`ON`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_CACHE_LICENSE MSK_ON file
```

Groups

License manager

MSK_IPAR_COMPRESS_STATFILE

Control compression of stat files.

Default

`ON`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_COMPRESS_STATFILE MSK_ON file
```

MSK_IPAR_FOLDING_USE

Controls whether and how to use problem folding (symmetry detection for continuous problems). Note that for symmetry detection for mixed-integer problems one should instead use the parameter `MSK_IPAR_MIO_SYMMETRY_LEVEL`.

Default*FREE_UNLESS_BASIC***Accepted***OFF, FREE, FREE_UNLESS_BASIC, FORCE***Example**

```
mosek -d MSK_IPAR_FOLDING_USE MSK_FOLDING_MODE_FREE_UNLESS_BASIC file
```

Groups*Presolve***MSK_IPAR_GETDUAL_CONVERT_LMIS**

Whether to perform LMI detection and optimization in the user-level dualizer.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_GETDUAL_CONVERT_LMIS MSK_ON file
```

MSK_IPAR_HEARTBEAT_SIM_FREQ_TICKS

Controls how frequent the new simplex optimizer calls the user-defined callback function is called.

- -1 . Logging is disabled.
- 0 . Logging at highest frequency (every iteration).
- ≥ 1 . Logging at given frequency measured in ticks.

Default

1000000

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_HEARTBEAT_SIM_FREQ_TICKS 1000000 file
```

Groups*Simplex optimizer, Output information, Logging***MSK_IPAR_INFEAS_GENERIC_NAMES**

Controls whether generic names are used when an infeasible subproblem is created.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_INFEAS_GENERIC_NAMES MSK_OFF file
```

Groups*Infeasibility report***MSK_IPAR_INFEAS_REPORT_AUTO**

Controls whether an infeasibility report is automatically produced after the optimization if the problem is primal or dual infeasible.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_INFEAS_REPORT_AUTO MSK_OFF file
```

Groups*Data input/output, Solution input/output*

MSK_IPAR_INFEAS_REPORT_LEVEL

Controls the amount of information presented in an infeasibility report. Higher values imply more information.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_INFEAS_REPORT_LEVEL 1 file
```

Groups

Infeasibility report, Output information

MSK_IPAR_INTPNT_BASIS

Controls whether the interior-point optimizer also computes an optimal basis.

Default

ALWAYS

Accepted

NEVER, ALWAYS, NO_ERROR, IF_FEASIBLE, RESERVED

Example

```
mosek -d MSK_IPAR_INTPNT_BASIS MSK_BI_ALWAYS file
```

See also

*MSK_IPAR_BI_IGNORE_MAX_ITER, MSK_IPAR_BI_IGNORE_NUM_ERROR,
MSK_IPAR_BI_MAX_ITERATIONS, MSK_IPAR_BI_CLEAN_OPTIMIZER*

Groups

Interior-point method, Basis identification

MSK_IPAR_INTPNT_DIFF_STEP

Controls whether different step sizes are allowed in the primal and dual space.

Default

ON

Accepted

- *ON*: Different step sizes are allowed.
- *OFF*: Different step sizes are not allowed.

Example

```
mosek -d MSK_IPAR_INTPNT_DIFF_STEP MSK_ON file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_HOTSTART

Currently not in use.

Default

NONE

Accepted

NONE, PRIMAL, DUAL, PRIMAL_DUAL

Example

```
mosek -d MSK_IPAR_INTPNT_HOTSTART MSK_INTPNT_HOTSTART_NONE file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_MAX_ITERATIONS

Controls the maximum number of iterations allowed in the interior-point optimizer.

Default

400

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_INTPNT_MAX_ITERATIONS 400 file
```

Groups*Interior-point method, Termination criteria***MSK_IPAR_INTPNT_MAX_NUM_COR**

Controls the maximum number of correctors allowed by the multiple corrector procedure. A negative value means that **MOSEK** is making the choice.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_INTPNT_MAX_NUM_COR -1 file
```

Groups*Interior-point method***MSK_IPAR_INTPNT_OFF_COL_TRH**

Controls how many offending columns are detected in the Jacobian of the constraint matrix.

0	no detection
1	aggressive detection
> 1	higher values mean less aggressive detection

Default

40

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_INTPNT_OFF_COL_TRH 40 file
```

Groups*Interior-point method***MSK_IPAR_INTPNT_ORDER_GP_NUM_SEEDS**

The GP ordering is dependent on a random seed. Therefore, trying several random seeds may lead to a better ordering. This parameter controls the number of random seeds tried.

A value of 0 means that MOSEK makes the choice.

Default

0

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_INTPNT_ORDER_GP_NUM_SEEDS 0 file
```

Groups*Interior-point method***MSK_IPAR_INTPNT_ORDER_METHOD**

Controls the ordering strategy used by the interior-point optimizer when factorizing the Newton equation system.

Default*FREE*

Accepted

FREE, *APPMINLOC*, *EXPERIMENTAL*, *TRY_GRAPHPAR*, *FORCE_GRAPHPAR*, *NONE*

Example

```
mosek -d MSK_IPAR_INTPNT_ORDER_METHOD MSK_ORDER_METHOD_FREE file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_REGULARIZATION_USE

Controls whether regularization is allowed.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_INTPNT_REGULARIZATION_USE MSK_ON file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_SCALING

Controls how the problem is scaled before the interior-point optimizer is used.

Default

FREE

Accepted

FREE, *NONE*

Example

```
mosek -d MSK_IPAR_INTPNT_SCALING MSK_SCALING_FREE file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_SOLVE_FORM

Controls whether the primal or the dual problem is solved.

Default

FREE

Accepted

FREE, *PRIMAL*, *DUAL*

Example

```
mosek -d MSK_IPAR_INTPNT_SOLVE_FORM MSK_SOLVE_FREE file
```

Groups

Interior-point method

MSK_IPAR_INTPNT_STARTING_POINT

Starting point used by the interior-point optimizer.

Default

FREE

Accepted

FREE, *GUESS*, *CONSTANT*

Example

```
mosek -d MSK_IPAR_INTPNT_STARTING_POINT MSK_STARTING_POINT_FREE file
```

Groups

Interior-point method

MSK_IPAR_LICENSE_DEBUG

This option is used to turn on debugging of the license manager.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_LICENSE_DEBUG MSK_OFF file
```

Groups

License manager

MSK_IPAR_LICENSE_PAUSE_TIME

If *MSK_IPAR_LICENSE_WAIT* is *MSK_ON* and no license is available, then **MOSEK** sleeps a number of milliseconds between each check of whether a license has become free.

Default

100

Accepted

[0; 1000000]

Example

```
mosek -d MSK_IPAR_LICENSE_PAUSE_TIME 100 file
```

Groups

License manager

MSK_IPAR_LICENSE_SUPPRESS_EXPIRE_WRNS

Controls whether license features expire warnings are suppressed.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_LICENSE_SUPPRESS_EXPIRE_WRNS MSK_OFF file
```

Groups

License manager, Output information

MSK_IPAR_LICENSE_TRH_EXPIRY_WRN

If a license feature expires in a numbers of days less than the value of this parameter then a warning will be issued.

Default

7

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LICENSE_TRH_EXPIRY_WRN 7 file
```

Groups

License manager, Output information

MSK_IPAR_LICENSE_WAIT

If all licenses are in use **MOSEK** returns with an error code. However, by turning on this parameter **MOSEK** will wait for an available license.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_LICENSE_WAIT MSK_OFF file
```

Groups

Overall solver, Overall system, License manager

MSK_IPAR_LOG

Controls the amount of log information. The value 0 implies that all log information is suppressed. A higher level implies that more information is logged.

Please note that if a task is employed to solve a sequence of optimization problems the value of this parameter is reduced by the value of [MSK_IPAR_LOG_CUT_SECOND_OPT](#) for the second and any subsequent optimizations.

Default

10

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG 10 file
```

See also

[MSK_IPAR_LOG_CUT_SECOND_OPT](#)

Groups

Output information, Logging

MSK_IPAR_LOG_ANA_PRO

Controls amount of output from the problem analyzer.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_ANA_PRO 1 file
```

Groups

Analysis, Logging

MSK_IPAR_LOG_BI

Controls the amount of output printed by the basis identification procedure. A higher level implies that more information is logged.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_BI 1 file
```

Groups

Basis identification, Output information, Logging

MSK_IPAR_LOG_BI_FREQ

Controls how frequently the optimizer outputs information about the basis identification and how frequent the user-defined callback function is called.

Default

2500

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_BI_FREQ 2500 file
```

Groups

Basis identification, Output information, Logging

MSK_IPAR_LOG_CUT_SECOND_OPT

If a task is employed to solve a sequence of optimization problems, then the value of the log levels is reduced by the value of this parameter. E.g [MSK_IPAR_LOG](#) and [MSK_IPAR_LOG_SIM](#) are reduced by the value of this parameter for the second and any subsequent optimizations.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_CUT_SECOND_OPT 1 file
```

See also

[MSK_IPAR_LOG](#), [MSK_IPAR_LOG_INTPNT](#), [MSK_IPAR_LOG_MIO](#), [MSK_IPAR_LOG_SIM](#)

Groups

Output information, Logging

MSK_IPAR_LOG_EXPAND

Controls the amount of logging when a data item such as the maximum number constrains is expanded.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_EXPAND 1 file
```

Groups

Output information, Logging

MSK_IPAR_LOG_FEAS_REPAIR

Controls the amount of output printed when performing feasibility repair. A value higher than one means extensive logging.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_FEAS_REPAIR 1 file
```

Groups

Output information, Logging

MSK_IPAR_LOG_FILE

If turned on, then some log info is printed when a file is written or read.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_FILE 1 file
```

Groups

Data input/output, Output information, Logging

MSK_IPAR_LOG_INCLUDE_SUMMARY

Not relevant for this API.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_LOG_INCLUDE_SUMMARY MSK_OFF file
```

Groups

Output information, *Logging*

MSK_IPAR_LOG_INFEAS_ANA

Controls amount of output printed by the infeasibility analyzer procedures. A higher level implies that more information is logged.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_INFEAS_ANA 1 file
```

Groups

Infeasibility report, *Output information*, *Logging*

MSK_IPAR_LOG_INTPNT

Controls amount of output printed by the interior-point optimizer. A higher level implies that more information is logged.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_INTPNT 1 file
```

Groups

Interior-point method, *Output information*, *Logging*

MSK_IPAR_LOG_LOCAL_INFO

Controls whether local identifying information like environment variables, filenames, IP addresses etc. are printed to the log.

Note that this will only affect some functions. Some functions that specifically emit system information will not be affected.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_LOG_LOCAL_INFO MSK_ON file
```

Groups

Output information, *Logging*

MSK_IPAR_LOG_MIO

Controls the log level for the mixed-integer optimizer. A higher level implies that more information is logged.

Default

4

Accepted

[0; +inf]

Example`mosek -d MSK_IPAR_LOG_MIO 4 file`**Groups***Mixed-integer optimization, Output information, Logging***MSK_IPAR_LOG_MIO_FREQ**

Controls how frequent the mixed-integer optimizer prints the log line. It will print line every time `MSK_IPAR_LOG_MIO_FREQ` relaxations have been solved.

Default

10

Accepted

[-inf; +inf]

Example`mosek -d MSK_IPAR_LOG_MIO_FREQ 10 file`**Groups***Mixed-integer optimization, Output information, Logging***MSK_IPAR_LOG_ORDER**

If turned on, then factor lines are added to the log.

Default

1

Accepted

[0; +inf]

Example`mosek -d MSK_IPAR_LOG_ORDER 1 file`**Groups***Output information, Logging***MSK_IPAR_LOG_PRESOLVE**

Controls amount of output printed by the presolve procedure. A higher level implies that more information is logged.

Default

1

Accepted

[0; +inf]

Example`mosek -d MSK_IPAR_LOG_PRESOLVE 1 file`**Groups***Logging***MSK_IPAR_LOG_SENSITIVITY**

Controls the amount of logging during the sensitivity analysis.

- 0. Means no logging information is produced.
- 1. Timing information is printed.
- 2. Sensitivity results are printed.

Default

1

Accepted

[0; +inf]

Example`mosek -d MSK_IPAR_LOG_SENSITIVITY 1 file`

Groups

Output information, Logging

MSK_IPAR_LOG_SENSITIVITY_OPT

Controls the amount of logging from the optimizers employed during the sensitivity analysis. 0 means no logging information is produced.

Default

0

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_SENSITIVITY_OPT 0 file
```

Groups

Output information, Logging

MSK_IPAR_LOG_SIM

Controls amount of output printed by the simplex optimizer. A higher level implies that more information is logged.

Default

4

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_SIM 4 file
```

Groups

Simplex optimizer, Output information, Logging

MSK_IPAR_LOG_SIM_FREQ

Controls how frequent the simplex optimizer outputs information about the optimization and how frequent the user-defined callback function is called.

Default

1000

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_SIM_FREQ 1000 file
```

Groups

Simplex optimizer, Output information, Logging

MSK_IPAR_LOG_SIM_FREQ_GIGA_TICKS

Controls how frequent the new simplex optimizer outputs information about the optimization and how frequent the user-defined callback function is called.

- -1. Logging is disabled.
- 0. Logging at highest frequency (every iteration).
- ≥ 1 . Logging at given frequency measured in giga ticks.

Default

100

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_LOG_SIM_FREQ_GIGA_TICKS 100 file
```

Groups

Simplex optimizer, Output information, Logging

MSK_IPAR_LOG_STORAGE

When turned on, **MOSEK** prints messages regarding the storage usage and allocation.

Default

0

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_LOG_STORAGE 0 file
```

Groups

Output information, Overall system, Logging

MSK_IPAR_MAX_NUM_WARNINGS

Each warning is shown a limited number of times controlled by this parameter. A negative value is identical to infinite number of times.

Default

10

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_MAX_NUM_WARNINGS 10 file
```

Groups

Output information

MSK_IPAR_MIO_BRANCH_DIR

Controls whether the mixed-integer optimizer is branching up or down by default.

Default

FREE

Accepted

FREE, UP, DOWN, NEAR, FAR, ROOT_LP, GUIDED, PSEUDOCOST

Example

```
mosek -d MSK_IPAR_MIO_BRANCH_DIR MSK_BRANCH_DIR_FREE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CONFLICT_ANALYSIS_LEVEL

Controls the amount of conflict analysis employed by the mixed-integer optimizer.

- -1. The optimizer chooses the level of conflict analysis employed
- 0. conflict analysis is disabled
- 1. A lower amount of conflict analysis is employed
- 2. A higher amount of conflict analysis is employed

Default

-1

Accepted

[-1; 2]

Example

```
mosek -d MSK_IPAR_MIO_CONFLICT_ANALYSIS_LEVEL -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CONIC_OUTER_APPROXIMATION

If this option is turned on outer approximation is used when solving relaxations of conic problems; otherwise interior point is used.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_MIO_CONIC_OUTER_APPROXIMATION MSK_OFF file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CONSTRUCT_SOL

If set to *MSK_ON* and all integer variables have been given a value for which a feasible mixed integer solution exists, then **MOSEK** generates an initial solution to the mixed integer problem by fixing all integer values and solving the remaining problem.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_MIO_CONSTRUCT_SOL MSK_OFF file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CROSSOVER_MAX_NODES

Controls the maximum number of nodes allowed in each call to the Crossover heuristic. The default value of -1 means that the value is determined automatically. A value of zero turns off the heuristic.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_MIO_CROSSOVER_MAX_NODES -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_CLIQUE

Controls whether clique cuts should be generated.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_MIO_CUT_CLIQUE MSK_ON file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_CMIR

Controls whether mixed integer rounding cuts should be generated.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_MIO_CUT_CMIR MSK_ON file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_GMI

Controls whether GMI cuts should be generated.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_MIO_CUT_GMI MSK_ON file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_IMPLIED_BOUND

Controls whether implied bound cuts should be generated.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_MIO_CUT_IMPLIED_BOUND MSK_ON file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_KNAPSACK_COVER

Controls whether knapsack cover cuts should be generated.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_MIO_CUT_KNAPSACK_COVER MSK_ON file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_LIPRO

Controls whether lift-and-project cuts should be generated.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_MIO_CUT_LIPRO MSK_OFF file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_CUT_SELECTION_LEVEL

Controls how aggressively generated cuts are selected to be included in the relaxation.

- -1. The optimizer chooses the level of cut selection
- 0. Generated cuts less likely to be added to the relaxation

- 1. Cuts are more aggressively selected to be included in the relaxation

Default

-1

Accepted

[-1; +1]

Example

```
mosek -d MSK_IPAR_MIO_CUT_SELECTION_LEVEL -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_DATA_PERMUTATION_METHOD

Controls what problem data permutation method is applied to mixed-integer problems.

Default

NONE

Accepted

NONE, CYCLIC_SHIFT, RANDOM

Example

```
mosek -d MSK_IPAR_MIO_DATA_PERMUTATION_METHOD  
MSK_MIO_DATA_PERMUTATION_METHOD_NONE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_DUAL_RAY_ANALYSIS_LEVEL

Controls the amount of dual ray analysis employed by the mixed-integer optimizer.

- -1. The optimizer chooses the level of dual ray analysis employed
- 0. Dual ray analysis is disabled
- 1. A lower amount of dual ray analysis is employed
- 2. A higher amount of dual ray analysis is employed

Default

-1

Accepted

[-1; 2]

Example

```
mosek -d MSK_IPAR_MIO_DUAL_RAY_ANALYSIS_LEVEL -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_FEASPUMP_LEVEL

Controls the way the Feasibility Pump heuristic is employed by the mixed-integer optimizer.

- -1. The optimizer chooses how the Feasibility Pump is used
- 0. The Feasibility Pump is disabled
- 1. The Feasibility Pump is enabled with an effort to improve solution quality
- 2. The Feasibility Pump is enabled with an effort to reach feasibility early

Default

-1

Accepted

[-1; 2]

Example

```
mosek -d MSK_IPAR_MIO_FEASPUMP_LEVEL -1 file
```

Groups

Mixed-integer optimization

`MSK_IPAR_MIO_HEURISTIC_LEVEL`

Controls the heuristic employed by the mixed-integer optimizer to locate an initial good integer feasible solution. A value of zero means the heuristic is not used at all. A larger value than 0 means that a gradually more sophisticated heuristic is used which is computationally more expensive. A negative value implies that the optimizer chooses the heuristic. Normally a value around 3 to 5 should be optimal.

Default

-1

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_IPAR_MIO_HEURISTIC_LEVEL -1 file
```

Groups

Mixed-integer optimization

`MSK_IPAR_MIO_INDEPENDENT_BLOCK_LEVEL`

Controls the way the mixed-integer optimizer tries to find and exploit a decomposition of the problem into independent blocks.

- -1. The optimizer chooses how independent-block structure is handled
- 0. No independent-block structure is detected
- 1. Independent-block structure may be exploited only in presolve
- 2. Independent-block structure may be exploited through a dedicated algorithm after the root node
- 3. Independent-block structure may be exploited through a dedicated algorithm before the root node

Default

-1

Accepted

[-1; 3]

Example

```
mosek -d MSK_IPAR_MIO_INDEPENDENT_BLOCK_LEVEL -1 file
```

Groups

Mixed-integer optimization

`MSK_IPAR_MIO_MAX_NUM_BRANCHES`

Maximum number of branches allowed during the branch and bound search. A negative value means infinite.

Default

-1

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_IPAR_MIO_MAX_NUM_BRANCHES -1 file
```

Groups

Mixed-integer optimization, Termination criteria

`MSK_IPAR_MIO_MAX_NUM_RELAXS`

Maximum number of relaxations allowed during the branch and bound search. A negative value means infinite.

Default

-1

Accepted

[$-\infty$; $+\infty$]

Example

```
mosek -d MSK_IPAR_MIO_MAX_NUM_RELAXS -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_MAX_NUM_RESTARTS

Maximum number of restarts allowed during the branch and bound search.

Default

10

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_MIO_MAX_NUM_RESTARTS 10 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_MAX_NUM_ROOT_CUT_ROUNDS

Maximum number of cut separation rounds at the root node.

Default

100

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_MIO_MAX_NUM_ROOT_CUT_ROUNDS 100 file
```

Groups

Mixed-integer optimization, Termination criteria

MSK_IPAR_MIO_MAX_NUM_SOLUTIONS

The mixed-integer optimizer can be terminated after a certain number of different feasible solutions has been located. If this parameter has the value $n > 0$, then the mixed-integer optimizer will be terminated when n feasible solutions have been located.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_MIO_MAX_NUM_SOLUTIONS -1 file
```

Groups

Mixed-integer optimization, Termination criteria

MSK_IPAR_MIO_MEMORY_EMPHASIS_LEVEL

Controls how much emphasis is put on reducing memory usage. Being more conservative about memory usage may come at the cost of decreased solution speed.

- 0. The optimizer chooses

- 1. More emphasis is put on reducing memory usage and less on speed

Default

0

Accepted

[0; +1]

Example

```
mosek -d MSK_IPAR_MIO_MEMORY_EMPHASIS_LEVEL 0 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_MIN_REL

Number of times a variable must have been branched on for its pseudocost to be considered reliable.

Default

5

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_MIO_MIN_REL 5 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_MODE

Controls whether the optimizer includes the integer restrictions and disjunctive constraints when solving a (mixed) integer optimization problem.

Default

SATISFIED

Accepted

IGNORED, SATISFIED

Example

```
mosek -d MSK_IPAR_MIO_MODE MSK_MIO_MODE_SATISFIED file
```

Groups

Overall solver

MSK_IPAR_MIO_NODE_OPTIMIZER

Controls which optimizer is employed at the non-root nodes in the mixed-integer optimizer.

Default

FREE

Accepted

FREE, INTPNT, CONIC, PRIMAL_SIMPLEX, DUAL_SIMPLEX, NEW_PRIMAL_SIMPLEX, NEW_DUAL_SIMPLEX, FREE_SIMPLEX, MIXED_INT

Example

```
mosek -d MSK_IPAR_MIO_NODE_OPTIMIZER MSK_OPTIMIZER_FREE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_NODE_SELECTION

Controls the node selection strategy employed by the mixed-integer optimizer.

Default

FREE

Accepted

FREE, FIRST, BEST, PSEUDO

Example

```
mosek -d MSK_IPAR_MIO_NODE_SELECTION MSK_MIO_NODE_SELECTION_FREE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_NUMERICAL_EMPHASIS_LEVEL

Controls how much emphasis is put on reducing numerical problems possibly at the expense of solution speed.

- 0. The optimizer chooses
- 1. More emphasis is put on reducing numerical problems
- 2. Even more emphasis

Default

0

Accepted

[0; +2]

Example

```
mosek -d MSK_IPAR_MIO_NUMERICAL_EMPHASIS_LEVEL 0 file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_OPT_FACE_MAX_NODES**

Controls the maximum number of nodes allowed in each call to the optimal face heuristic. The default value of -1 means that the value is determined automatically. A value of zero turns off the heuristic.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_MIO_OPT_FACE_MAX_NODES -1 file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_PERSPECTIVE_REFORMULATE**

Enables or disables perspective reformulation in presolve.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_MIO_PERSPECTIVE_REFORMULATE MSK_ON file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_PRESOLVE.Aggregator_Use**

Controls if the aggregator should be used.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_MIO_PRESOLVE.Aggregator_Use MSK_ON file
```

Groups*Presolve***MSK_IPAR_MIO_Probing_Level**

Controls the amount of probing employed by the mixed-integer optimizer in presolve.

- -1. The optimizer chooses the level of probing employed
- 0. Probing is disabled
- 1. A low amount of probing is employed
- 2. A medium amount of probing is employed
- 3. A high amount of probing is employed

Default

-1

Accepted

[-1; 3]

Example

```
mosek -d MSK_IPAR_MIO_PROBING_LEVEL -1 file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_PROPAGATE_OBJECTIVE_CONSTRAINT**

Use objective domain propagation.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_MIO_PROPAGATE_OBJECTIVE_CONSTRAINT MSK_OFF file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_QCQO_REFORMULATION_METHOD**

Controls what reformulation method is applied to mixed-integer quadratic problems.

Default*FREE***Accepted***FREE, NONE, LINEARIZATION, EIGEN_VAL_METHOD, DIAG_SDP, RELAX_SDP***Example**

```
mosek -d MSK_IPAR_MIO_QCQO_REFORMULATION_METHOD
```

```
MSK_MIO_QCQO_REFORMULATION_METHOD_FREE file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_RENS_MAX_NODES**

Controls the maximum number of nodes allowed in each call to the RENS heuristic. The default value of -1 means that the value is determined automatically. A value of zero turns off the heuristic.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_MIO_RENS_MAX_NODES -1 file
```

Groups*Mixed-integer optimization***MSK_IPAR_MIO_RINS_MAX_NODES**

Controls the maximum number of nodes allowed in each call to the RINS heuristic. The default value of -1 means that the value is determined automatically. A value of zero turns off the heuristic.

Default

-1

Accepted

[-1; +inf]

Example

```
mosek -d MSK_IPAR_MIO_RINS_MAX_NODES -1 file
```

Groups*Mixed-integer optimization*

MSK_IPAR_MIO_ROOT_OPTIMIZER

Controls which optimizer is employed at the root node in the mixed-integer optimizer.

Default

FREE

Accepted

FREE, INTPNT, CONIC, PRIMAL_SIMPLEX, DUAL_SIMPLEX, NEW_PRIMAL_SIMPLEX, NEW_DUAL_SIMPLEX, FREE_SIMPLEX, MIXED_INT

Example

```
mosek -d MSK_IPAR_MIO_ROOT_OPTIMIZER MSK_OPTIMIZER_FREE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_SEED

Sets the random seed used for randomization in the mixed integer optimizer. Selecting a different seed can change the path the optimizer takes to the optimal solution.

Default

42

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_MIO_SEED 42 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_SYMMETRY_LEVEL

Controls the amount of symmetry detection and handling employed by the mixed-integer optimizer in presolve.

- -1. The optimizer chooses the level of symmetry detection and handling employed
- 0. Symmetry detection and handling is disabled
- 1. A low amount of symmetry detection and handling is employed
- 2. A medium amount of symmetry detection and handling is employed
- 3. A high amount of symmetry detection and handling is employed
- 4. An extremely high amount of symmetry detection and handling is employed

Default

-1

Accepted

[-1; 4]

Example

```
mosek -d MSK_IPAR_MIO_SYMMETRY_LEVEL -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_VAR_SELECTION

Controls the variable selection strategy employed by the mixed-integer optimizer.

Default

FREE

Accepted

FREE, PSEUDOCOST, STRONG

Example

```
mosek -d MSK_IPAR_MIO_VAR_SELECTION MSK_MIO_VAR_SELECTION_FREE file
```

Groups

Mixed-integer optimization

MSK_IPAR_MIO_VB_DETECTION_LEVEL

Controls how much effort is put into detecting variable bounds.

- -1. The optimizer chooses
- 0. No variable bounds are detected
- 1. Only detect variable bounds that are directly represented in the problem
- 2. Detect variable bounds in probing

Default

-1

Accepted

[-1; +2]

Example

```
mosek -d MSK_IPAR_MIO_VB_DETECTION_LEVEL -1 file
```

Groups

Mixed-integer optimization

MSK_IPAR_MT_SPINCOUNT

Set the number of iterations to spin before sleeping.

Default

0

Accepted

[0; 1000000000]

Example

```
mosek -d MSK_IPAR_MT_SPINCOUNT 0 file
```

Groups

Overall system

MSK_IPAR_NG

Not in use.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_NG MSK_OFF file
```

MSK_IPAR_NUM_THREADS

Controls the number of threads employed by the optimizer. If set to 0 the number of threads used will be equal to the number of cores detected on the machine.

Default

0

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_NUM_THREADS 0 file
```

Groups

Overall system

MSK_IPAR_OPF_WRITE_HEADER

Write a text header with date and **MOSEK** version in an OPF file.

Default

ON

Accepted*ON, OFF***Example**

```
mosek -d MSK_IPAR_OPF_WRITE_HEADER MSK_ON file
```

Groups*Data input/output***MSK_IPAR_OPF_WRITE_HINTS**

Write a hint section with problem dimensions in the beginning of an OPF file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_OPF_WRITE_HINTS MSK_ON file
```

Groups*Data input/output***MSK_IPAR_OPF_WRITE_LINE_LENGTH**

Aim to keep lines in OPF files not much longer than this.

Default

80

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_OPF_WRITE_LINE_LENGTH 80 file
```

Groups*Data input/output***MSK_IPAR_OPF_WRITE_PARAMETERS**

Write a parameter section in an OPF file.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_OPF_WRITE_PARAMETERS MSK_OFF file
```

Groups*Data input/output***MSK_IPAR_OPF_WRITE_PROBLEM**

Write objective, constraints, bounds etc. to an OPF file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_OPF_WRITE_PROBLEM MSK_ON file
```

Groups*Data input/output*

`MSK_IPAR_OPF_WRITE_SOL_BAS`

If `MSK_IPAR_OPF_WRITE_SOLUTIONS` is `MSK_ON` and a basic solution is defined, include the basic solution in OPF files.

Default

`ON`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_OPF_WRITE_SOL_BAS MSK_ON file
```

Groups

Data input/output

`MSK_IPAR_OPF_WRITE_SOL_ITG`

If `MSK_IPAR_OPF_WRITE_SOLUTIONS` is `MSK_ON` and an integer solution is defined, write the integer solution in OPF files.

Default

`ON`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_OPF_WRITE_SOL_ITG MSK_ON file
```

Groups

Data input/output

`MSK_IPAR_OPF_WRITE_SOL_ITR`

If `MSK_IPAR_OPF_WRITE_SOLUTIONS` is `MSK_ON` and an interior solution is defined, write the interior solution in OPF files.

Default

`ON`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_OPF_WRITE_SOL_ITR MSK_ON file
```

Groups

Data input/output

`MSK_IPAR_OPF_WRITE_SOLUTIONS`

Enable inclusion of solutions in the OPF files.

Default

`OFF`

Accepted

`ON, OFF`

Example

```
mosek -d MSK_IPAR_OPF_WRITE_SOLUTIONS MSK_OFF file
```

Groups

Data input/output

`MSK_IPAR_OPTIMIZER`

The parameter controls which optimizer is used to optimize the task.

Default

`FREE`

Accepted

`FREE, INTPNT, CONIC, PRIMAL_SIMPLEX, DUAL_SIMPLEX, NEW_PRIMAL_SIMPLEX, NEW_DUAL_SIMPLEX, FREE_SIMPLEX, MIXED_INT`

Example

```
mosek -d MSK_IPAR_OPTIMIZER MSK_OPTIMIZER_FREE file
```

Groups

Overall solver

MSK_IPAR_PARAM_READ_CASE_NAME

If turned on, then names in the parameter file are case sensitive.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_PARAM_READ_CASE_NAME MSK_ON file
```

Groups

Data input/output

MSK_IPAR_PARAM_READ_IGN_ERROR

If turned on, then errors in parameter settings is ignored.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_PARAM_READ_IGN_ERROR MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_FILL

Controls the maximum amount of fill-in that can be created by one pivot in the elimination phase of the presolve. A negative value means the parameter value is selected automatically.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_FILL -1 file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_NUM_TRIES

Control the maximum number of times the eliminator is tried. A negative value implies **MOSEK** decides.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_ELIMINATOR_MAX_NUM_TRIES -1 file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_LINDEP_ABS_WORK_TRH

Controls linear dependency check in presolve. The linear dependency check is potentially computationally expensive.

Default

100

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_LINDEP_ABS_WORK_TRH 100 file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_LINDEP_NEW

Controls whether a new experimental linear dependency checker is employed.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_PRESOLVE_LINDEP_NEW MSK_OFF file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_LINDEP_REL_WORK_TRH

Controls linear dependency check in presolve. The linear dependency check is potentially computationally expensive.

Default

100

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_LINDEP_REL_WORK_TRH 100 file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_LINDEP_USE

Controls whether the linear constraints are checked for linear dependencies.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_PRESOLVE_LINDEP_USE MSK_ON file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_MAX_NUM_PASS

Control the maximum number of times presolve passes over the problem. A negative value implies **MOSEK** decides.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_MAX_NUM_PASS -1 file
```

Groups

Presolve

MSK_IPAR_PRESOLVE_MAX_NUM_REDUCIONS

Controls the maximum number of reductions performed by the presolve. The value of the parameter is normally only changed in connection with debugging. A negative value implies that an infinite number of reductions are allowed.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_PRESOLVE_MAX_NUM_REDUCIONS -1 file
```

Groups

Overall solver, Presolve

MSK_IPAR_PRESOLVE_USE

Controls whether the presolve is applied to a problem before it is optimized.

Default

FREE

Accepted

OFF, ON, FREE

Example

```
mosek -d MSK_IPAR_PRESOLVE_USE MSK_PRESOLVE_MODE_FREE file
```

Groups

Overall solver, Presolve

MSK_IPAR_PRIMAL_REPAIR_OPTIMIZER

Controls which optimizer that is used to find the optimal repair.

Default

FREE

Accepted

FREE, INTPNT, CONIC, PRIMAL_SIMPLEX, DUAL_SIMPLEX, NEW_PRIMAL_SIMPLEX, NEW_DUAL_SIMPLEX, FREE_SIMPLEX, MIXED_INT

Example

```
mosek -d MSK_IPAR_PRIMAL_REPAIR_OPTIMIZER MSK_OPTIMIZER_FREE file
```

Groups

Overall solver

MSK_IPAR_PTF_WRITE_PARAMETERS

If *MSK_IPAR_PTF_WRITE_PARAMETERS* is *MSK_ON*, the parameters section is written.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_PTF_WRITE_PARAMETERS MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_PTF_WRITE_SINGLE_PSD_TERMS

Controls whether PSD terms with a coefficient matrix of just one non-zero are written as a single term instead of as a matrix term.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_PTF_WRITE_SINGLE_PSD_TERMS MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_PTF_WRITE_SOLUTIONS

If *MSK_IPAR_PTF_WRITE_SOLUTIONS* is *MSK_ON*, the solution section is written if any solutions are available, otherwise solution section is not written even if solutions are available.

Default

OFF

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_PTF_WRITE_SOLUTIONS MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_PTF_WRITE_TRANSFORM

If *MSK_IPAR_PTF_WRITE_TRANSFORM* is *MSK_ON*, constraint blocks with identifiable conic slacks are transformed into conic constraints and the slacks are eliminated.

Default

ON

Accepted

ON, *OFF*

Example

```
mosek -d MSK_IPAR_PTF_WRITE_TRANSFORM MSK_ON file
```

Groups

Data input/output

MSK_IPAR_READ_ASYNC

Controls whether files are read using synchronous or asynchronous reader.

Default

OFF

Accepted

- *ON*: Use asynchronous reader
- *OFF*: Use synchronous reader

Example

```
mosek -d MSK_IPAR_READ_ASYNC MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_READ_DEBUG

Turns on additional debugging information when reading files.

Default

OFF

Accepted*ON, OFF***Example**

```
mosek -d MSK_IPAR_READ_DEBUG MSK_OFF file
```

Groups*Data input/output***MSK_IPAR_READ_KEEP_FREE_CON**

Controls whether the free constraints are included in the problem. Applies to MPS files.

Default*OFF***Accepted**

- *ON*: The free constraints are kept.
- *OFF*: The free constraints are discarded.

Example

```
mosek -d MSK_IPAR_READ_KEEP_FREE_CON MSK_OFF file
```

Groups*Data input/output***MSK_IPAR_READ_MPS_FORMAT**

Controls how strictly the MPS file reader interprets the MPS format.

Default*FREE***Accepted***STRICT, RELAXED, FREE, CPLEX***Example**

```
mosek -d MSK_IPAR_READ_MPS_FORMAT MSK_MPS_FORMAT_FREE file
```

Groups*Data input/output***MSK_IPAR_READ_MPS_WIDTH**

Controls the maximal number of characters allowed in one line of the MPS file.

Default

1024

Accepted

[80; +inf]

Example

```
mosek -d MSK_IPAR_READ_MPS_WIDTH 1024 file
```

Groups*Data input/output***MSK_IPAR_READ_TASK_IGNORE_PARAM**

Controls whether **MOSEK** should ignore the parameter setting defined in the task file and use the default parameter setting instead.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_READ_TASK_IGNORE_PARAM MSK_OFF file
```

Groups*Data input/output*

MSK_IPAR_REMOTE_USE_COMPRESSION

Use compression when sending data to an optimization server.

Default

ZSTD

Accepted

NONE, FREE, GZIP, ZSTD

Example

```
mosek -d MSK_IPAR_REMOTE_USE_COMPRESSION MSK_COMPRESS_ZSTD file
```

MSK_IPAR_REMOVE_UNUSED_SOLUTIONS

Removes unused solutions before the optimization is performed.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_REMOVE_UNUSED_SOLUTIONS MSK_OFF file
```

Groups

Overall system

MSK_IPAR_SENSITIVITY_ALL

Not applicable.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SENSITIVITY_ALL MSK_OFF file
```

Groups

Overall solver

MSK_IPAR_SENSITIVITY_TYPE

Controls which type of sensitivity analysis is to be performed.

Default

BASIS

Accepted

BASIS

Example

```
mosek -d MSK_IPAR_SENSITIVITY_TYPE MSK_SENSITIVITY_TYPE_BASIS file
```

Groups

Overall solver

MSK_IPAR_SIM BASIS_FACTOR_USE

Controls whether an LU factorization of the basis is used in a hot-start. Forcing a refactorization sometimes improves the stability of the simplex optimizers, but in most cases there is a performance penalty.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SIM BASIS_FACTOR_USE MSK_ON file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_DEGEN

Controls how aggressively degeneration is handled.

Default

FREE

Accepted

NONE, *FREE*, *AGGRESSIVE*, *Moderate*, *MINIMUM*

Example

```
mosek -d MSK_IPAR_SIM_DEGEN MSK_SIM_DEGEN_FREE file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_DETECT_PWL

Not in use.

Default

ON

Accepted

- *ON*: PWL are detected.
- *OFF*: PWL are not detected.

Example

```
mosek -d MSK_IPAR_SIM_DETECT_PWL MSK_ON file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_DUAL_CRASH

Controls whether crashing is performed in the dual simplex optimizer. If this parameter is set to x , then a crash will be performed if a basis consists of more than $(100 - x) \bmod f_v$ entries, where f_v is the number of fixed variables.

Default

90

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_SIM_DUAL_CRASH 90 file
```

Groups

Dual simplex

MSK_IPAR_SIM_DUAL_PHASEONE_METHOD

An experimental feature.

Default

0

Accepted

[0; 10]

Example

```
mosek -d MSK_IPAR_SIM_DUAL_PHASEONE_METHOD 0 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_DUAL_RESTRICT_SELECTION

The dual simplex optimizer can use a so-called restricted selection/pricing strategy to choose the outgoing variable. Hence, if restricted selection is applied, then the dual simplex optimizer first choose a subset of all the potential outgoing variables. Next, for some time it will choose the outgoing variable only among the subset. From time to time the subset is redefined. A larger value of this parameter implies that the optimizer will be more aggressive in its restriction strategy, i.e. a value of 0 implies that the restriction strategy is not applied at all.

Default

50

Accepted

[0; 100]

Example

```
mosek -d MSK_IPAR_SIM_DUAL_RESTRICT_SELECTION 50 file
```

Groups*Dual simplex***MSK_IPAR_SIM_DUAL_SELECTION**

Controls the choice of the incoming variable, known as the selection strategy, in the dual simplex optimizer.

Default*FREE***Accepted***FREE, FULL, ASE, DEVEX, SE, PARTIAL***Example**

```
mosek -d MSK_IPAR_SIM_DUAL_SELECTION MSK_SIM_SELECTION_FREE file
```

Groups*Dual simplex***MSK_IPAR_SIM_EXPLOIT_DUPVEC**

Controls if the simplex optimizers are allowed to exploit duplicated columns.

Default*OFF***Accepted***ON, OFF, FREE***Example**

```
mosek -d MSK_IPAR_SIM_EXPLOIT_DUPVEC MSK_SIM_EXPLOIT_DUPVEC_OFF file
```

Groups*Simplex optimizer***MSK_IPAR_SIM_HOTSTART**

Controls the type of hot-start that the simplex optimizer perform.

Default*FREE***Accepted***NONE, FREE, STATUS_KEYS***Example**

```
mosek -d MSK_IPAR_SIM_HOTSTART MSK_SIM_HOTSTART_FREE file
```

Groups*Simplex optimizer***MSK_IPAR_SIM_HOTSTART_LU**

Determines if the simplex optimizer should exploit the initial factorization.

Default*ON***Accepted**

- *ON*: Factorization is reused if possible.
- *OFF*: Factorization is recomputed.

Example

```
mosek -d MSK_IPAR_SIM_HOTSTART_LU MSK_ON file
```

Groups*Simplex optimizer*

MSK_IPAR_SIM_MAX_ITERATIONS

Maximum number of iterations that can be used by a simplex optimizer.

Default

10000000

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_SIM_MAX_ITERATIONS 10000000 file
```

Groups

Simplex optimizer, Termination criteria

MSK_IPAR_SIM_MAX_NUM_SETBACKS

Controls how many set-backs are allowed within a simplex optimizer. A set-back is an event where the optimizer moves in the wrong direction. This is impossible in theory but may happen due to numerical problems.

Default

250

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_SIM_MAX_NUM_SETBACKS 250 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_NON_SINGULAR

Controls if the simplex optimizer ensures a non-singular basis, if possible.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SIM_NON_SINGULAR MSK_ON file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_PRECISION

Experimental. Usage not recommended.

Default

NORMAL

Accepted

NORMAL, EXTENDED

Example

```
mosek -d MSK_IPAR_SIM_PRECISION MSK_SIM_PRECISION_NORMAL file
```

Groups

Overall solver

MSK_IPAR_SIM_PRECISION_BOOST

Controls whether the simplex optimizer is allowed to boost the precision during the computations if possible.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SIM_PRECISION_BOOST MSK_OFF file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_PRIMAL_CRASH

Controls whether crashing is performed in the primal simplex optimizer. In general, if a basis consists of more than (100-this parameter value)% fixed variables, then a crash will be performed.

Default

90

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_SIM_PRIMAL_CRASH 90 file
```

Groups

Primal simplex

MSK_IPAR_SIM_PRIMAL_PHASEONE_METHOD

An experimental feature.

Default

0

Accepted

[0; 10]

Example

```
mosek -d MSK_IPAR_SIM_PRIMAL_PHASEONE_METHOD 0 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_PRIMAL_RESTRICT_SELECTION

The primal simplex optimizer can use a so-called restricted selection/pricing strategy to choose the outgoing variable. Hence, if restricted selection is applied, then the primal simplex optimizer first choose a subset of all the potential incoming variables. Next, for some time it will choose the incoming variable only among the subset. From time to time the subset is redefined. A larger value of this parameter implies that the optimizer will be more aggressive in its restriction strategy, i.e. a value of 0 implies that the restriction strategy is not applied at all.

Default

50

Accepted

[0; 100]

Example

```
mosek -d MSK_IPAR_SIM_PRIMAL_RESTRICT_SELECTION 50 file
```

Groups

Primal simplex

MSK_IPAR_SIM_PRIMAL_SELECTION

Controls the choice of the incoming variable, known as the selection strategy, in the primal simplex optimizer.

Default

FREE

Accepted

FREE, FULL, ASE, DEVEX, SE, PARTIAL

Example

```
mosek -d MSK_IPAR_SIM_PRIMAL_SELECTION MSK_SIM_SELECTION_FREE file
```

Groups

Primal simplex

MSK_IPAR_SIM_REFATOR_FREQ

Controls how frequent the basis is refactorized. The value 0 means that the optimizer determines the best point of refactorization. It is strongly recommended NOT to change this parameter.

Default

0

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_SIM_REFATOR_FREQ 0 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_REFORMULATION

Controls if the simplex optimizers are allowed to reformulate the problem.

Default

OFF

Accepted

ON, OFF, FREE, AGGRESSIVE

Example

```
mosek -d MSK_IPAR_SIM_REFORMULATION MSK_SIM_REFORMULATION_OFF file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SAVE_LU

Controls if the LU factorization stored should be replaced with the LU factorization corresponding to the initial basis.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SIM_SAVE_LU MSK_OFF file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SCALING

Controls how much effort is used in scaling the problem before a simplex optimizer is used.

Default

FREE

Accepted

FREE, NONE

Example

```
mosek -d MSK_IPAR_SIM_SCALING MSK_SCALING_FREE file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SCALING_METHOD

Controls how the problem is scaled before a simplex optimizer is used.

Default

POW2

Accepted

POW2, FREE

Example

```
mosek -d MSK_IPAR_SIM_SCALING_METHOD MSK_SCALING_METHOD_POW2 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SEED

Sets the random seed used for randomization in the simplex optimizers.

Default

23456

Accepted

[0; 32749]

Example

```
mosek -d MSK_IPAR_SIM_SEED 23456 file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SOLVE_FORM

Controls whether the primal or the dual problem is solved by the primal-/dual-simplex optimizer.

Default

FREE

Accepted

FREE, PRIMAL, DUAL

Example

```
mosek -d MSK_IPAR_SIM_SOLVE_FORM MSK_SOLVE_FREE file
```

Groups

Simplex optimizer

MSK_IPAR_SIM_SWITCH_OPTIMIZER

The simplex optimizer sometimes chooses to solve the dual problem instead of the primal problem. This implies that if you have chosen to use the dual simplex optimizer and the problem is dualized, then it actually makes sense to use the primal simplex optimizer instead. If this parameter is on and the problem is dualized and furthermore the simplex optimizer is chosen to be the primal (dual) one, then it is switched to the dual (primal).

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SIM_SWITCH_OPTIMIZER MSK_OFF file
```

Groups

Simplex optimizer

MSK_IPAR_SOL_FILTER_KEEP_BASIC

If turned on, then basic and super basic constraints and variables are written to the solution file independent of the filter setting.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_SOL_FILTER_KEEP_BASIC MSK_OFF file
```

Groups

Solution input/output

MSK_IPAR_SOL_READ_NAME_WIDTH

When a solution is read by **MOSEK** and some constraint, variable or cone names contain blanks, then a maximum name width must be specified. A negative value implies that no name contain blanks.

Default

-1

Accepted

[-inf; +inf]

Example

```
mosek -d MSK_IPAR_SOL_READ_NAME_WIDTH -1 file
```

Groups

Data input/output, Solution input/output

MSK_IPAR_SOL_READ_WIDTH

Controls the maximal acceptable width of line in the solutions when read by **MOSEK**.

Default

1024

Accepted

[80; +inf]

Example

```
mosek -d MSK_IPAR_SOL_READ_WIDTH 1024 file
```

Groups

Data input/output, Solution input/output

MSK_IPAR_TIMING_LEVEL

Controls the amount of timing performed inside **MOSEK**.

Default

1

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_TIMING_LEVEL 1 file
```

Groups

Overall system

MSK_IPAR_WRITE_ASYNC

Controls whether files are read using synchronous or asynchronous writer.

Default

OFF

Accepted

- *ON*: Use asynchronous writer
- *OFF*: Use synchronous writer

Example

```
mosek -d MSK_IPAR_WRITE_ASYNC MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_WRITE_BAS_CONSTRAINTS

Controls whether the constraint section is written to the basic solution file.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_BAS_CONSTRAINTS MSK_ON file
```

Groups

Data input/output, Solution input/output

MSK_IPAR_WRITE_BAS_HEAD

Controls whether the header section is written to the basic solution file.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_BAS_HEAD MSK_ON file
```

Groups

Data input/output, Solution input/output

MSK_IPAR_WRITE_BAS_VARIABLES

Controls whether the variables section is written to the basic solution file.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_BAS_VARIABLES MSK_ON file
```

Groups

Data input/output, Solution input/output

MSK_IPAR_WRITE_COMPRESSION

Controls whether the data file is compressed while it is written. 0 means no compression while higher values mean more compression.

Default

9

Accepted

[0; +inf]

Example

```
mosek -d MSK_IPAR_WRITE_COMPRESSION 9 file
```

Groups

Data input/output

MSK_IPAR_WRITE_FREE_CON

Controls whether the free constraints are written to the data file. Applies to MPS files.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_FREE_CON MSK_ON file
```

Groups

Data input/output

MSK_IPAR_WRITE_GENERIC_NAMES

Controls whether generic names should be used instead of user-defined names when writing to the data file.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_GENERIC_NAMES MSK_OFF file
```

Groups*Data input/output***MSK_IPAR_WRITE_IGNORE_INCOMPATIBLE_ITEMS**

Controls if the writer ignores incompatible problem items when writing files.

Default*OFF***Accepted**

- *ON*: Ignore items that cannot be written to the current output file format.
- *OFF*: Produce an error if the problem contains items that cannot be written to the current output file format.

Example

```
mosek -d MSK_IPAR_WRITE_IGNORE_INCOMPATIBLE_ITEMS MSK_OFF file
```

Groups*Data input/output***MSK_IPAR_WRITE_INT_CONSTRAINTS**

Controls whether the constraint section is written to the integer solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_INT_CONSTRAINTS MSK_ON file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_INT_HEAD**

Controls whether the header section is written to the integer solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_INT_HEAD MSK_ON file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_INT_VARIABLES**

Controls whether the variables section is written to the integer solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_INT_VARIABLES MSK_ON file
```

Groups*Data input/output, Solution input/output*

MSK_IPAR_WRITE_JSON_INDENTATION

When set, the JSON task and solution files are written with indentation for better readability.

Default

OFF

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_JSON_INDENTATION MSK_OFF file
```

Groups

Data input/output

MSK_IPAR_WRITE_LP_FULL_OBJ

Write all variables, including the ones with 0-coefficients, in the objective.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_LP_FULL_OBJ MSK_ON file
```

Groups

Data input/output

MSK_IPAR_WRITE_LP_LINE_WIDTH

Maximum width of line in an LP file written by **MOSEK**.

Default

80

Accepted

[40; +inf]

Example

```
mosek -d MSK_IPAR_WRITE_LP_LINE_WIDTH 80 file
```

Groups

Data input/output

MSK_IPAR_WRITE_MPS_FORMAT

Controls in which format the MPS file is written.

Default

FREE

Accepted

STRICT, RELAXED, FREE, CPLEX

Example

```
mosek -d MSK_IPAR_WRITE_MPS_FORMAT MSK_MPS_FORMAT_FREE file
```

Groups

Data input/output

MSK_IPAR_WRITE_MPS_INT

Controls if marker records are written to the MPS file to indicate whether variables are integer restricted.

Default

ON

Accepted

ON, OFF

Example

```
mosek -d MSK_IPAR_WRITE_MPS_INT MSK_ON file
```

Groups*Data input/output***MSK_IPAR_WRITE_SOL_BARVARIABLES**

Controls whether the symmetric matrix variables section is written to the solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_SOL_BARVARIABLES MSK_ON file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_SOL_CONSTRAINTS**

Controls whether the constraint section is written to the solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_SOL_CONSTRAINTS MSK_ON file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_SOL_HEAD**

Controls whether the header section is written to the solution file.

Default*ON***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_SOL_HEAD MSK_ON file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_SOL_IGNORE_INVALID_NAMES**

Even if the names are invalid MPS names, then they are employed when writing the solution file.

Default*OFF***Accepted***ON, OFF***Example**

```
mosek -d MSK_IPAR_WRITE_SOL_IGNORE_INVALID_NAMES MSK_OFF file
```

Groups*Data input/output, Solution input/output***MSK_IPAR_WRITE_SOL_VARIABLES**

Controls whether the variables section is written to the solution file.

Default*ON***Accepted***ON, OFF*

Example

```
mosek -d MSK_IPAR_WRITE_SOL_VARIABLES MSK_ON file
```

Groups

Data input/output, Solution input/output

10.2.3 String parameters

MSK_SPAR_BAS_SOL_FILE_NAME

Name of the `bas` solution file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_BAS_SOL_FILE_NAME somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_DATA_FILE_NAME

Data are read and written to this file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_DATA_FILE_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_DEBUG_FILE_NAME

MOSEK debug file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_DEBUG_FILE_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_INT_SOL_FILE_NAME

Name of the `int` solution file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_INT_SOL_FILE_NAME somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_ITR_SOL_FILE_NAME

Name of the `itr` solution file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_ITR_SOL_FILE_NAME somevalue file
```

Groups

Data input/output, Solution input/output

`MSK_SPAR_MIO_DEBUG_STRING`

For internal debugging purposes.

Accepted

Any valid string.

Example

```
mosek -d MSK_SPAR_MIO_DEBUG_STRING somevalue file
```

Groups

Data input/output

`MSK_SPAR_PARAM_COMMENT_SIGN`

Only the first character in this string is used. It is considered as a start of comment sign in the **MOSEK** parameter file. Spaces are ignored in the string.

Default

`%%`

Accepted

Any valid string.

Example

```
mosek -d MSK_SPAR_PARAM_COMMENT_SIGN %% file
```

Groups

Data input/output

`MSK_SPAR_PARAM_READ_FILE_NAME`

Modifications to the parameter database is read from this file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_PARAM_READ_FILE_NAME somevalue file
```

Groups

Data input/output

`MSK_SPAR_PARAM_WRITE_FILE_NAME`

The parameter database is written to this file.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_PARAM_WRITE_FILE_NAME somevalue file
```

Groups

Data input/output

`MSK_SPAR_READ_MPS_BOU_NAME`

Name of the BOUNDS vector used. An empty name means that the first BOUNDS vector is used.

Accepted

Any valid MPS name.

Example

```
mosek -d MSK_SPAR_READ_MPS_BOU_NAME somevalue file
```

Groups

Data input/output

`MSK_SPAR_READ_MPS_OBJ_NAME`

Name of the free constraint used as objective function. An empty name means that the first constraint is used as objective function.

Accepted

Any valid MPS name.

Example

```
mosek -d MSK_SPAR_READ_MPS_OBJ_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_READ_MPS_RAN_NAME

Name of the RANGE vector used. An empty name means that the first RANGE vector is used.

Accepted

Any valid MPS name.

Example

```
mosek -d MSK_SPAR_READ_MPS_RAN_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_READ_MPS_RHS_NAME

Name of the RHS used. An empty name means that the first RHS vector is used.

Accepted

Any valid MPS name.

Example

```
mosek -d MSK_SPAR_READ_MPS_RHS_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_REMOTE_OPTSERVER_HOST

URL of the remote optimization server in the format (`http|https://server:port`). If set, all subsequent calls to any **MOSEK** function that involves synchronous optimization will be sent to the specified OptServer instead of being executed locally. Passing empty string deactivates this redirection.

Accepted

Any valid URL.

Example

```
mosek -d MSK_SPAR_REMOTE_OPTSERVER_HOST somevalue file
```

Groups

Overall system

MSK_SPAR_REMOTE_TLS_CERT

List of known server certificates in PEM format.

Accepted

PEM files separated by new-lines.

Example

```
mosek -d MSK_SPAR_REMOTE_TLS_CERT somevalue file
```

Groups

Overall system

MSK_SPAR_REMOTE_TLS_CERT_PATH

Path to known server certificates in PEM format.

Accepted

Any valid path.

Example

```
mosek -d MSK_SPAR_REMOTE_TLS_CERT_PATH somevalue file
```

Groups

Overall system

MSK_SPAR_SENSITIVITY_FILE_NAME

Not applicable.

Accepted

Any valid string.

Example

```
mosek -d MSK_SPAR_SENSITIVITY_FILE_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_SENSITIVITY_RES_FILE_NAME

Not applicable.

Accepted

Any valid string.

Example

```
mosek -d MSK_SPAR_SENSITIVITY_RES_FILE_NAME somevalue file
```

Groups

Data input/output

MSK_SPAR_SOL_FILTER_XC_LOW

A filter used to determine which constraints should be listed in the solution file. A value of 0.5 means that all constraints having $xc[i] > 0.5$ should be listed, whereas $+0.5$ means that all constraints having $xc[i] \geq blc[i] + 0.5$ should be listed. An empty filter means that no filter is applied.

Accepted

Any valid filter.

Example

```
mosek -d MSK_SPAR_SOL_FILTER_XC_LOW somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_SOL_FILTER_XC_UPR

A filter used to determine which constraints should be listed in the solution file. A value of 0.5 means that all constraints having $xc[i] < 0.5$ should be listed, whereas -0.5 means all constraints having $xc[i] \leq buc[i] - 0.5$ should be listed. An empty filter means that no filter is applied.

Accepted

Any valid filter.

Example

```
mosek -d MSK_SPAR_SOL_FILTER_XC_UPR somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_SOL_FILTER_XX_LOW

A filter used to determine which variables should be listed in the solution file. A value of “0.5” means that all constraints having $xx[j] \geq 0.5$ should be listed, whereas “+0.5” means that all constraints having $xx[j] \geq blx[j] + 0.5$ should be listed. An empty filter means no filter is applied.

Accepted

Any valid filter.

Example

```
mosek -d MSK_SPAR_SOL_FILTER_XX_LOW somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_SOL_FILTER_XX_UPR

A filter used to determine which variables should be listed in the solution file. A value of “0.5” means that all constraints having $xx[j] < 0.5$ should be printed, whereas “-0.5” means all constraints having $xx[j] \leq bux[j] - 0.5$ should be listed. An empty filter means no filter is applied.

Accepted

Any valid file name.

Example

```
mosek -d MSK_SPAR_SOL_FILTER_XX_UPR somevalue file
```

Groups

Data input/output, Solution input/output

MSK_SPAR_STAT_KEY

Key used when writing the summary file.

Accepted

Any valid string.

Example

```
mosek -d MSK_SPAR_STAT_KEY somevalue file
```

Groups

Data input/output

MSK_SPAR_STAT_NAME

Name used when writing the statistics file.

Accepted

Any valid XML string.

Example

```
mosek -d MSK_SPAR_STAT_NAME somevalue file
```

Groups

Data input/output

10.3 Response codes

Response codes include:

- *Termination codes*
- *Warnings*
- *Errors*

The numerical code (in brackets) identifies the response in error messages and in the log output.

10.3.1 Termination

MSK_RES_OK (0)

No error occurred.

MSK_RES_TRM_MAX_ITERATIONS (100000)

The optimizer terminated at the maximum number of iterations.

MSK_RES_TRM_MAX_TIME (100001)

The optimizer terminated at the maximum amount of time.

MSK_RES_TRM_OBJECTIVE_RANGE (100002)

The optimizer terminated with an objective value outside the objective range.

MSK_RES_TRM_MIO_NUM_RELAXS (100008)

The mixed-integer optimizer terminated as the maximum number of relaxations was reached.

MSK_RES_TRM_MIO_NUM_BRANCHES (100009)

The mixed-integer optimizer terminated as the maximum number of branches was reached.

`MSK_RES_TRM_NUM_MAX_NUM_INT_SOLUTIONS` (100015)

The mixed-integer optimizer terminated as the maximum number of feasible solutions was reached.

`MSK_RES_TRM_STALL` (100006)

The optimizer is terminated due to slow progress.

Stalling means that numerical problems prevent the optimizer from making reasonable progress and that it makes no sense to continue. In many cases this happens if the problem is badly scaled or otherwise ill-conditioned. There is no guarantee that the solution will be feasible or optimal. However, often stalling happens near the optimum, and the returned solution may be of good quality. Therefore, it is recommended to check the status of the solution. If the solution status is optimal the solution is most likely good enough for most practical purposes.

Please note that if a linear optimization problem is solved using the interior-point optimizer with basis identification turned on, the returned basic solution likely to have high accuracy, even though the optimizer stalled.

Some common causes of stalling are a) badly scaled models, b) near feasible or near infeasible problems.

`MSK_RES_TRM_USER_CALLBACK` (100007)

The optimizer terminated due to the return of the user-defined callback function.

`MSK_RES_TRM_MAX_NUM_SETBACKS` (100020)

The optimizer terminated as the maximum number of set-backs was reached. This indicates serious numerical problems and a possibly badly formulated problem.

`MSK_RES_TRM_NUMERICAL_PROBLEM` (100025)

The optimizer terminated due to numerical problems.

`MSK_RES_TRM_LOST_RACE` (100027)

Lost a race.

`MSK_RES_TRM_INTERNAL` (100030)

The optimizer terminated due to some internal reason. Please contact **MOSEK** support.

`MSK_RES_TRM_INTERNAL_STOP` (100031)

The optimizer terminated for internal reasons. Please contact **MOSEK** support.

`MSK_RES_TRM_SERVER_MAX_TIME` (100032)

remote server terminated **MOSEK** on time limit criteria.

`MSK_RES_TRM_SERVER_MAX_MEMORY` (100033)

remote server terminated **MOSEK** on memory limit criteria.

10.3.2 Warnings

`MSK_RES_WRN_OPEN_PARAM_FILE` (50)

The parameter file could not be opened.

`MSK_RES_WRN_LARGE_BOUND` (51)

A numerically large bound value is specified.

`MSK_RES_WRN_LARGE_LO_BOUND` (52)

A numerically large lower bound value is specified.

`MSK_RES_WRN_LARGE_UP_BOUND` (53)

A numerically large upper bound value is specified.

`MSK_RES_WRN_LARGE_CON_FX` (54)

An equality constraint is fixed to a numerically large value. This can cause numerical problems.

`MSK_RES_WRN_LARGE_CJ` (57)

A numerically large value is specified for one c_j .

`MSK_RES_WRN_LARGE_AIJ` (62)

A numerically large value is specified for an $a_{i,j}$ element in A . The parameter `MSK_DPAR_DATA_TOL_AIJ_LARGE` controls when an $a_{i,j}$ is considered large.

`MSK_RES_WRN_ZERO_AIJ` (63)

One or more zero elements are specified in A .

MSK_RES_WRN_NAME_MAX_LEN (65)

A name is longer than the buffer that is supposed to hold it.

MSK_RES_WRN_SPAR_MAX_LEN (66)

A value for a string parameter is longer than the buffer that is supposed to hold it.

MSK_RES_WRN_MPS_SPLIT_RHS_VECTOR (70)

An RHS vector is split into several nonadjacent parts in an MPS file.

MSK_RES_WRN_MPS_SPLIT_RAN_VECTOR (71)

A RANGE vector is split into several nonadjacent parts in an MPS file.

MSK_RES_WRN_MPS_SPLIT_BOU_VECTOR (72)

A BOUNDS vector is split into several nonadjacent parts in an MPS file.

MSK_RES_WRN_LP_OLD_QUAD_FORMAT (80)

Missing '/2' after quadratic expressions in bound or objective.

MSK_RES_WRN_LP_DROP_VARIABLE (85)

Ignored a variable because the variable was not previously defined. Usually this implies that a variable appears in the bound section but not in the objective or the constraints.

MSK_RES_WRN_NZ_IN_UPR_TRI (200)

Non-zero elements specified in the upper triangle of a matrix were ignored.

MSK_RES_WRN_DROPPED_NZ_QOBJ (201)

One or more non-zero elements were dropped in the Q matrix in the objective.

MSK_RES_WRN_IGNORE_INTEGER (250)

Ignored integer constraints.

MSK_RES_WRN_NO_GLOBAL_OPTIMIZER (251)

No global optimizer is available.

MSK_RES_WRN_MIO_INFEASIBLE_FINAL (270)

The final mixed-integer problem with all the integer variables fixed at their optimal values is infeasible.

MSK_RES_WRN_SOL_FILTER (300)

Invalid solution filter is specified.

MSK_RES_WRN_UNDEF_SOL_FILE_NAME (350)

Undefined name occurred in a solution.

MSK_RES_WRN_SOL_FILE_IGNORED_CON (351)

One or more lines in the constraint section were ignored when reading a solution file.

MSK_RES_WRN_SOL_FILE_IGNORED_VAR (352)

One or more lines in the variable section were ignored when reading a solution file.

MSK_RES_WRN_TOO_FEW_BASIS_VARS (400)

An incomplete basis has been specified. Too few basis variables are specified.

MSK_RES_WRN_TOO_MANY_BASIS_VARS (405)

A basis with too many variables has been specified.

MSK_RES_WRN_LICENSE_EXPIRE (500)

The license expires.

MSK_RES_WRN_LICENSE_SERVER (501)

The license server is not responding.

MSK_RES_WRN_EMPTY_NAME (502)

A variable or constraint name is empty. The output file may be invalid.

MSK_RES_WRN_USING_GENERIC_NAMES (503)

Generic names are used because a name is invalid. For instance when writing an LP file the names must not contain blanks or start with a digit. Also remember to give the objective function a name.

MSK_RES_WRN_INVALID_MPS_NAME (504)

A name e.g. a row name is not a valid MPS name.

MSK_RES_WRN_INVALID_MPS_OBJ_NAME (505)

The objective name is not a valid MPS name.

`MSK_RES_WRN_LICENSE_FEATURE_EXPIRE` (509)

The license expires.

`MSK_RES_WRN_PARAM_NAME_DOU` (510)

The parameter name is not recognized as a double parameter.

`MSK_RES_WRN_PARAM_NAME_INT` (511)

The parameter name is not recognized as a integer parameter.

`MSK_RES_WRN_PARAM_NAME_STR` (512)

The parameter name is not recognized as a string parameter.

`MSK_RES_WRN_PARAM_STR_VALUE` (515)

The string is not recognized as a symbolic value for the parameter.

`MSK_RES_WRN_PARAM_IGNORED_CMIO` (516)

A parameter was ignored by the conic mixed integer optimizer.

`MSK_RES_WRN_ZEROS_IN_SPARSE_ROW` (705)

One or more (near) zero elements are specified in a sparse row of a matrix. Since, it is redundant to specify zero elements then it may indicate an error.

`MSK_RES_WRN_ZEROS_IN_SPARSE_COL` (710)

One or more (near) zero elements are specified in a sparse column of a matrix. It is redundant to specify zero elements. Hence, it may indicate an error.

`MSK_RES_WRN_INCOMPLETE_LINEAR_DEPENDENCY_CHECK` (800)

The linear dependency check(s) is incomplete. Normally this is not an important warning unless the optimization problem has been formulated with linear dependencies. Linear dependencies may prevent **MOSEK** from solving the problem.

`MSK_RES_WRN_ELIMINATOR_SPACE` (801)

The eliminator is skipped at least once due to lack of space.

`MSK_RES_WRN_PRESOLVE_OUTOFSPACE` (802)

The presolve is incomplete due to lack of space.

`MSK_RES_WRN_PRESOLVE_PRIMAL_PERTURBATIONS` (803)

The presolve perturbed the bounds of the primal problem. This is an indication that the problem is nearly infeasible.

`MSK_RES_WRN_WRITE_CHANGED_NAMES` (830)

Some names were changed because they were invalid for the output file format.

`MSK_RES_WRN_WRITE_DISCARDED_CFIX` (831)

The fixed objective term could not be converted to a variable and was discarded in the output file.

`MSK_RES_WRN_DUPLICATE_CONSTRAINT_NAMES` (850)

Two constraint names are identical.

`MSK_RES_WRN_DUPLICATE_VARIABLE_NAMES` (851)

Two variable names are identical.

`MSK_RES_WRN_DUPLICATE_BARVARIABLE_NAMES` (852)

Two barvariable names are identical.

`MSK_RES_WRN_DUPLICATE_CONE_NAMES` (853)

Two cone names are identical.

`MSK_RES_WRN_ANA_LARGE_BOUNDS` (900)

This warning is issued by the problem analyzer, if one or more constraint or variable bounds are very large. One should consider omitting these bounds entirely by setting them to +inf or -inf.

`MSK_RES_WRN_ANA_C_ZERO` (901)

This warning is issued by the problem analyzer, if the coefficients in the linear part of the objective are all zero.

`MSK_RES_WRN_ANA_EMPTY_COLS` (902)

This warning is issued by the problem analyzer, if columns, in which all coefficients are zero, are found.

`MSK_RES_WRN_ANA_CLOSE_BOUNDS` (903)

This warning is issued by problem analyzer, if ranged constraints or variables with very close upper and lower bounds are detected. One should consider treating such constraints as equalities and such variables as constants.

`MSK_RES_WRN_ANA_ALMOST_INT_BOUNDS` (904)

This warning is issued by the problem analyzer if a constraint is bound nearly integral.
`MSK_RES_WRN_NO_INFEASIBILITY_REPORT_WHEN_MATRIX_VARIABLES` (930)

An infeasibility report is not available when the problem contains matrix variables.
`MSK_RES_WRN_GETDUAL_IGNORES_INTEGRALITY` (940)

Dualizer ignores integer variables and disjunctive constraints.
`MSK_RES_WRN_NO_DUALIZER` (950)

No automatic dualizer is available for the specified problem. The primal problem is solved.
`MSK_RES_WRN_SYM_MAT_LARGE` (960)

A numerically large value is specified for an $e_{i,j}$ element in E . The parameter
`MSK_DPAR_DATA_SYM_MAT_TOL_LARGE` controls when an $e_{i,j}$ is considered large.
`MSK_RES_WRN_MODIFIED_DOUBLE_PARAMETER` (970)

A double parameter related to solver tolerances has a non-default value.
`MSK_RES_WRN_LARGE_FIJ` (980)

A numerically large value is specified for an $f_{i,j}$ element in F . The parameter
`MSK_DPAR_DATA_TOL_AIJ_LARGE` controls when an $f_{i,j}$ is considered large.
`MSK_RES_WRN_PTF_UNKNOWN_SECTION` (981)

Unexpected section in PTF file

10.3.3 Errors

`MSK_RES_ERR_LICENSE` (1000)

Invalid license.

`MSK_RES_ERR_LICENSE_EXPIRED` (1001)

The license has expired.

`MSK_RES_ERR_LICENSE_VERSION` (1002)

The license is valid for another version of **MOSEK**.

`MSK_RES_ERR_LICENSE_OLD_SERVER_VERSION` (1003)

The version of the FlexLM license server is too old. You should upgrade the license server to one matching this version of **MOSEK**. It will support this and all older versions of **MOSEK**.

This error can appear if the client was updated to a new version which includes an upgrade of the licensing module, making it incompatible with a much older license server.

`MSK_RES_ERR_SIZE_LICENSE` (1005)

The problem is bigger than the license.

`MSK_RES_ERR_PROB_LICENSE` (1006)

The software is not licensed to solve the problem.

`MSK_RES_ERR_FILE_LICENSE` (1007)

Invalid license file.

`MSK_RES_ERR_MISSING_LICENSE_FILE` (1008)

MOSEK cannot find license file or a token server. See the **MOSEK** licensing manual for details.

`MSK_RES_ERR_SIZE_LICENSE_CON` (1010)

The problem has too many constraints to be solved with the available license.

`MSK_RES_ERR_SIZE_LICENSE_VAR` (1011)

The problem has too many variables to be solved with the available license.

`MSK_RES_ERR_SIZE_LICENSE_INTPAR` (1012)

The problem contains too many integer variables to be solved with the available license.

`MSK_RES_ERR_OPTIMIZER_LICENSE` (1013)

The optimizer required is not licensed.

`MSK_RES_ERR_FLEXLM` (1014)

The FLEXlm license manager reported an error.

`MSK_RES_ERR_LICENSE_SERVER` (1015)

The license server is not responding.

MSK_RES_ERR_LICENSE_MAX (1016)

Maximum number of licenses is reached.

MSK_RES_ERR_LICENSE_MOSEKLM_DAEMON (1017)

The MOSEKLM license manager daemon is not up and running.

MSK_RES_ERR_LICENSE_FEATURE (1018)

A requested feature is not available in the license file(s). Most likely due to an incorrect license system setup.

MSK_RES_ERR_PLATFORM_NOT_LICENSED (1019)

A requested license feature is not available for the required platform.

MSK_RES_ERR_LICENSE_CANNOT_ALLOCATE (1020)

The license system cannot allocate the memory required.

MSK_RES_ERR_LICENSE_CANNOT_CONNECT (1021)

MOSEK cannot connect to the license server. Most likely the license server is not up and running.

MSK_RES_ERR_LICENSE_INVALID_HOSTID (1025)

The host ID specified in the license file does not match the host ID of the computer.

MSK_RES_ERR_LICENSE_SERVER_VERSION (1026)

The version specified in the checkout request is greater than the highest version number the daemon supports.

MSK_RES_ERR_LICENSE_NO_SERVER_SUPPORT (1027)

The license server does not support the requested feature. Possible reasons for this error include:

- The feature has expired.
- The feature's start date is later than today's date.
- The version requested is higher than feature's the highest supported version.
- A corrupted license file.

Try restarting the license and inspect the license server debug file, usually called `lmgrd.log`.

MSK_RES_ERR_LICENSE_NO_SERVER_LINE (1028)

There is no SERVER line in the license file. All non-zero license count features need at least one SERVER line.

MSK_RES_ERR_OLD_DLL (1035)

The dynamic link library is older than the specified version.

MSK_RES_ERR_NEWER_DLL (1036)

The dynamic link library is newer than the specified version.

MSK_RES_ERR_LINK_FILE_DLL (1040)

A file cannot be linked to a stream in the DLL version.

MSK_RES_ERR_THREAD_MUTEX_INIT (1045)

Could not initialize a mutex.

MSK_RES_ERR_THREAD_MUTEX_LOCK (1046)

Could not lock a mutex.

MSK_RES_ERR_THREAD_MUTEX_UNLOCK (1047)

Could not unlock a mutex.

MSK_RES_ERR_THREAD_CREATE (1048)

Could not create a thread. This error may occur if a large number of environments are created and not deleted again. In any case it is a good practice to minimize the number of environments created.

MSK_RES_ERR_THREAD_COND_INIT (1049)

Could not initialize a condition.

MSK_RES_ERR_UNKNOWN (1050)

Unknown error.

MSK_RES_ERR_SPACE (1051)

Out of space.

MSK_RES_ERR_FILE_OPEN (1052)
Error while opening a file.

MSK_RES_ERR_FILE_READ (1053)
File read error.

MSK_RES_ERR_FILE_WRITE (1054)
File write error.

MSK_RES_ERR_DATA_FILE_EXT (1055)
The data file format cannot be determined from the file name.

MSK_RES_ERR_INVALID_FILE_NAME (1056)
An invalid file name has been specified.

MSK_RES_ERR_INVALID_SOL_FILE_NAME (1057)
An invalid file name has been specified.

MSK_RES_ERR_END_OF_FILE (1059)
End of file has been reached unexpectedly.

MSK_RES_ERR_NULL_ENV (1060)
env is a NULL pointer.

MSK_RES_ERR_NULL_TASK (1061)
task is a NULL pointer.

MSK_RES_ERR_INVALID_STREAM (1062)
An invalid stream is referenced.

MSK_RES_ERR_NO_INIT_ENV (1063)
env is not initialized.

MSK_RES_ERR_INVALID_TASK (1064)
The task is invalid.

MSK_RES_ERR_NULL_POINTER (1065)
An argument to a function is unexpectedly a NULL pointer.

MSK_RES_ERR_LIVING_TASKS (1066)
All tasks associated with an environment must be deleted before the environment is deleted. There are still some undeleted tasks.

MSK_RES_ERR_READ_GZIP (1067)
Error encountered in GZIP stream.

MSK_RES_ERR_READ_ZSTD (1068)
Error encountered in ZSTD stream.

MSK_RES_ERR_READ_ASYNC (1069)
Error encountered in async stream.

MSK_RES_ERR_BLANK_NAME (1070)
An all blank name has been specified.

MSK_RES_ERR_DUP_NAME (1071)
The same name was used multiple times for the same problem item type.

MSK_RES_ERR_FORMAT_STRING (1072)
The name format string is invalid.

MSK_RES_ERR_SPARSITY_SPECIFICATION (1073)
The sparsity included an index that was out of bounds of the shape.

MSK_RES_ERR_MISMATCHING_DIMENSION (1074)
Mismatching dimensions specified in arguments

MSK_RES_ERR_INVALID_OBJ_NAME (1075)
An invalid objective name is specified.

MSK_RES_ERR_INVALID_CON_NAME (1076)
An invalid constraint name is used.

MSK_RES_ERR_INVALID_VAR_NAME (1077)
An invalid variable name is used.

`MSK_RES_ERR_INVALID_CONE_NAME` (1078)

An invalid cone name is used.

`MSK_RES_ERR_INVALID_BARVAR_NAME` (1079)

An invalid symmetric matrix variable name is used.

`MSK_RES_ERR_SPACE_LEAKING` (1080)

MOSEK is leaking memory. This can be due to either an incorrect use of **MOSEK** or a bug.

`MSK_RES_ERR_SPACE_NO_INFO` (1081)

No available information about the space usage.

`MSK_RES_ERR_DIMENSION_SPECIFICATION` (1082)

Invalid dimension specification

`MSK_RES_ERR_AXIS_NAME_SPECIFICATION` (1083)

Invalid axis names specification

`MSK_RES_ERR_READ_PREMATURE_EOF` (1089)

Encountered premature end-of-file in input stream.

`MSK_RES_ERR_READ_FORMAT` (1090)

The specified format cannot be read.

`MSK_RES_ERR_WRITE_LP_INVALID_VAR_NAMES` (1091)

Invalid variable name. Cannot write valid LP file.

`MSK_RES_ERR_WRITE_LP_DUPLICATE_VAR_NAMES` (1092)

Duplicate variable names. Cannot write valid LP file.

`MSK_RES_ERR_WRITE_LP_INVALID_CON_NAMES` (1093)

Invalid constraint name. Cannot write valid LP file.

`MSK_RES_ERR_WRITE_LP_DUPLICATE_CON_NAMES` (1094)

Duplicate constraint names. Cannot write valid LP file.

`MSK_RES_ERR MPS FILE` (1100)

An error occurred while reading an MPS file.

`MSK_RES_ERR MPS_INV_FIELD` (1101)

A field in the MPS file is invalid. Probably it is too wide.

`MSK_RES_ERR MPS_INV_MARKER` (1102)

An invalid marker has been specified in the MPS file.

`MSK_RES_ERR MPS_NULL_CON_NAME` (1103)

An empty constraint name is used in an MPS file.

`MSK_RES_ERR MPS_NULL_VAR_NAME` (1104)

An empty variable name is used in an MPS file.

`MSK_RES_ERR MPS_UNDEF_CON_NAME` (1105)

An undefined constraint name occurred in an MPS file.

`MSK_RES_ERR MPS_UNDEF_VAR_NAME` (1106)

An undefined variable name occurred in an MPS file.

`MSK_RES_ERR MPS_INVALID_CON_KEY` (1107)

An invalid constraint key occurred in an MPS file.

`MSK_RES_ERR MPS_INVALID_BOUND_KEY` (1108)

An invalid bound key occurred in an MPS file.

`MSK_RES_ERR MPS_INVALID_SEC_NAME` (1109)

An invalid section name occurred in an MPS file.

`MSK_RES_ERR MPS_NO_OBJECTIVE` (1110)

No objective is defined in an MPS file.

`MSK_RES_ERR MPS_SPLITTED_VAR` (1111)

All elements in a column of the A matrix must be specified consecutively. Hence, it is illegal to specify non-zero elements in A for variable 1, then for variable 2 and then variable 1 again.

`MSK_RES_ERR MPS_MUL_CON_NAME` (1112)

A constraint name was specified multiple times in the ROWS section.

MSK_RES_ERR MPS_MUL_QSEC (1113)

Multiple QSECTIONS are specified for a constraint in the MPS data file.

MSK_RES_ERR MPS_MUL_QOBJ (1114)

The Q term in the objective is specified multiple times in the MPS data file.

MSK_RES_ERR MPS_INV_SEC_ORDER (1115)

The sections in the MPS data file are not in the correct order.

MSK_RES_ERR MPS_MUL_CSEC (1116)

Multiple CSECTIONS are given the same name.

MSK_RES_ERR MPS_CONE_TYPE (1117)

Invalid cone type specified in a CSECTION.

MSK_RES_ERR MPS_CONE_OVERLAP (1118)

A variable is specified to be a member of several cones.

MSK_RES_ERR MPS_CONE_REPEAT (1119)

A variable is repeated within the CSECTION.

MSK_RES_ERR MPS_NON_SYMMETRIC_Q (1120)

A non symmetric matrix has been specified.

MSK_RES_ERR MPS_DUPLICATE_Q_ELEMENT (1121)

Duplicate elements is specified in a Q matrix.

MSK_RES_ERR MPS_INVALID_OBJSENSE (1122)

An invalid objective sense is specified.

MSK_RES_ERR MPS_TAB_IN_FIELD2 (1125)

A tab char occurred in field 2.

MSK_RES_ERR MPS_TAB_IN_FIELD3 (1126)

A tab char occurred in field 3.

MSK_RES_ERR MPS_TAB_IN_FIELD5 (1127)

A tab char occurred in field 5.

MSK_RES_ERR MPS_INVALID_OBJ_NAME (1128)

An invalid objective name is specified.

MSK_RES_ERR MPS_INVALID_KEY (1129)

An invalid indicator key occurred in an MPS file.

MSK_RES_ERR MPS_INVALID_INDICATOR_CONSTRAINT (1130)

An invalid indicator constraint is used. It must not be a ranged constraint.

MSK_RES_ERR MPS_INVALID_INDICATOR_VARIABLE (1131)

An invalid indicator variable is specified. It must be a binary variable.

MSK_RES_ERR MPS_INVALID_INDICATOR_VALUE (1132)

An invalid indicator value is specified. It must be either 0 or 1.

MSK_RES_ERR MPS_INVALID_INDICATOR_QUADRATIC_CONSTRAINT (1133)

A quadratic constraint can be an indicator constraint.

MSK_RES_ERR OPF_SYNTAX (1134)

Syntax error in an OPF file

MSK_RES_ERR OPF_PREMATURE_EOF (1136)

Premature end of file in an OPF file.

MSK_RES_ERR OPF_MISMATCHED_TAG (1137)

Mismatched end-tag in OPF file

MSK_RES_ERR OPF_DUPLICATE_BOUND (1138)

Either upper or lower bound was specified twice in OPF file

MSK_RES_ERR OPF_DUPLICATE_CONSTRAINT_NAME (1139)

Duplicate constraint name in OPF File

MSK_RES_ERR OPF_INVALID_CONE_TYPE (1140)

Invalid cone type in OPF File

MSK_RES_ERR OPF_INCORRECT_TAG_PARAM (1141)

Invalid number of parameters in start-tag in OPF File

MSK_RES_ERR_OPF_INVALID_TAG (1142)
 Invalid start-tag in OPF File

MSK_RES_ERR_OPF_DUPLICATE_CONE_ENTRY (1143)
 Same variable appears in multiple cones in OPF File

MSK_RES_ERR_OPF_TOO_LARGE (1144)
 The problem is too large to be correctly loaded

MSK_RES_ERR_OPF_DUAL_INTEGER SOLUTION (1146)
 Dual solution values are not allowed in OPF File

MSK_RES_ERR_LP_EMPTY (1151)
 The problem cannot be written to an LP formatted file.

MSK_RES_ERR_WRITE_MPS_INVALID_NAME (1153)
 An invalid name is created while writing an MPS file. Usually this will make the MPS file unreadable.

MSK_RES_ERR_LP_INVALID_VAR_NAME (1154)
 A variable name is invalid when used in an LP formatted file.

MSK_RES_ERR_WRITE_OPF_INVALID_VAR_NAME (1156)
 Empty variable names cannot be written to OPF files.

MSK_RES_ERR_LP_FILE_FORMAT (1157)
 Syntax error in an LP file.

MSK_RES_ERR_LP_EXPECTED_NUMBER (1158)
 Expected a number in LP file

MSK_RES_ERR_READ_LP_MISSING_END_TAG (1159)
 Syntax error in LP file. Possibly missing End tag.

MSK_RES_ERR_LP_INDICATOR_VAR (1160)
 An indicator variable was not declared binary

MSK_RES_ERR_LP_EXPECTED_OBJECTIVE (1161)
 Expected an objective section in LP file

MSK_RES_ERR_LP_EXPECTED_CONSTRAINT_RELATION (1162)
 Expected constraint relation

MSK_RES_ERR_LP_AMBIGUOUS_CONSTRAINT_BOUND (1163)
 Constraint has ambiguous or invalid bound

MSK_RES_ERR_LP_DUPLICATE_SECTION (1164)
 Duplicate section

MSK_RES_ERR_READ_LP_DELAYED_ROWS_NOT_SUPPORTED (1165)
 Duplicate section

MSK_RES_ERR_WRITING_FILE (1166)
 An error occurred while writing file

MSK_RES_ERR_WRITE_ASYNC (1167)
 An error occurred while performing asynchronous writing

MSK_RES_ERR_INVALID_NAME_IN_SOL_FILE (1170)
 An invalid name occurred in a solution file.

MSK_RES_ERR_JSON_SYNTAX (1175)
 Syntax error in an JSON data

MSK_RES_ERR_JSON_STRING (1176)
 Error in JSON string.

MSK_RES_ERR_JSON_NUMBER_OVERFLOW (1177)
 Invalid number entry - wrong type or value overflow.

MSK_RES_ERR_JSON_FORMAT (1178)
 Error in an JSON Task file

MSK_RES_ERR_JSON_DATA (1179)
 Inconsistent data in JSON Task file

MSK_RES_ERR_JSON_MISSING_DATA (1180)
Missing data section in JSON task file.

MSK_RES_ERR_PTF_INCOMPATIBILITY (1181)
Incompatible item

MSK_RES_ERR_PTF_UNDEFINED_ITEM (1182)
Undefined symbol referenced

MSK_RES_ERR_PTF_INCONSISTENCY (1183)
Inconsistent size of item

MSK_RES_ERR_PTF_FORMAT (1184)
Syntax error in an PTF file

MSK_RES_ERR_ARGUMENT_LENNEQ (1197)
Incorrect length of arguments.

MSK_RES_ERR_ARGUMENT_TYPE (1198)
Incorrect argument type.

MSK_RES_ERR_NUM_ARGUMENTS (1199)
Incorrect number of function arguments.

MSK_RES_ERR_IN_ARGUMENT (1200)
A function argument is incorrect.

MSK_RES_ERR_ARGUMENT_DIMENSION (1201)
A function argument is of incorrect dimension.

MSK_RES_ERR_SHAPE_IS_TOO_LARGE (1202)
The size of the n-dimensional shape is too large.

MSK_RES_ERR_INDEX_IS_TOO_SMALL (1203)
An index in an argument is too small.

MSK_RES_ERR_INDEX_IS_TOO_LARGE (1204)
An index in an argument is too large.

MSK_RES_ERR_INDEX_IS_NOT_UNIQUE (1205)
An index in an argument is not unique.

MSK_RES_ERR_PARAM_NAME (1206)
The parameter name is not correct.

MSK_RES_ERR_PARAM_NAME_DOU (1207)
The parameter name is not correct for a double parameter.

MSK_RES_ERR_PARAM_NAME_INT (1208)
The parameter name is not correct for an integer parameter.

MSK_RES_ERR_PARAM_NAME_STR (1209)
The parameter name is not correct for a string parameter.

MSK_RES_ERR_PARAM_INDEX (1210)
Parameter index is out of range.

MSK_RES_ERR_PARAM_IS_TOO_LARGE (1215)
The parameter value is too large.

MSK_RES_ERR_PARAM_IS_TOO_SMALL (1216)
The parameter value is too small.

MSK_RES_ERR_PARAM_VALUE_STR (1217)
The parameter value string is incorrect.

MSK_RES_ERR_PARAM_TYPE (1218)
The parameter type is invalid.

MSK_RES_ERR_INF_DOU_INDEX (1219)
A double information index is out of range for the specified type.

MSK_RES_ERR_INF_INT_INDEX (1220)
An integer information index is out of range for the specified type.

MSK_RES_ERR_INDEX_ARR_IS_TOO_SMALL (1221)
An index in an array argument is too small.

`MSK_RES_ERR_INDEX_ARR_IS_TOO_LARGE` (1222)

An index in an array argument is too large.

`MSK_RES_ERR_INF_LINT_INDEX` (1225)

A long integer information index is out of range for the specified type.

`MSK_RES_ERR_ARG_IS_TOO_SMALL` (1226)

The value of a argument is too small.

`MSK_RES_ERR_ARG_IS_TOO_LARGE` (1227)

The value of a argument is too large.

`MSK_RES_ERR_INVALID_WHICHsol` (1228)

`whichsol` is invalid.

`MSK_RES_ERR_INF_DOU_NAME` (1230)

A double information name is invalid.

`MSK_RES_ERR_INF_INT_NAME` (1231)

An integer information name is invalid.

`MSK_RES_ERR_INF_TYPE` (1232)

The information type is invalid.

`MSK_RES_ERR_INF_LINT_NAME` (1234)

A long integer information name is invalid.

`MSK_RES_ERR_INDEX` (1235)

An index is out of range.

`MSK_RES_ERR_WHICHsol` (1236)

The solution defined by `whichsol` does not exists.

`MSK_RES_ERR_SOLITEM` (1237)

The solution item number `solitem` is invalid. Please note that `MSK_SOL_ITEM_SNX` is invalid for the basic solution.

`MSK_RES_ERR_WHICHITEM_NOT_ALLOWED` (1238)

`whichitem` is unacceptable.

`MSK_RES_ERR_MAXNUMCON` (1240)

The maximum number of constraints specified is smaller than the number of constraints in the task.

`MSK_RES_ERR_MAXNUMVAR` (1241)

The maximum number of variables specified is smaller than the number of variables in the task.

`MSK_RES_ERR_MAXNUMBERVAR` (1242)

The maximum number of semidefinite variables specified is smaller than the number of semidefinite variables in the task.

`MSK_RES_ERR_MAXNUMQNZ` (1243)

The maximum number of non-zeros specified for the Q matrices is smaller than the number of non-zeros in the current Q matrices.

`MSK_RES_ERR_TOO_SMALL_MAX_NUM_NZ` (1245)

The maximum number of non-zeros specified is too small.

`MSK_RES_ERR_INVALID_IDX` (1246)

A specified index is invalid.

`MSK_RES_ERR_INVALID_MAX_NUM` (1247)

A specified index is invalid.

`MSK_RES_ERR_UNALLOWED_WHICHsol` (1248)

The value od `whichsol` is not allowed.

`MSK_RES_ERR_NUMCONLIM` (1250)

Maximum number of constraints limit is exceeded.

`MSK_RES_ERR_NUMVARLIM` (1251)

Maximum number of variables limit is exceeded.

`MSK_RES_ERR_TOO_SMALL_MAXNUMANZ` (1252)

The maximum number of non-zeros specified for A is smaller than the number of non-zeros in the current A .

`MSK_RES_ERR_INV_APTR` (1253)

`aptr[e[j]]` is strictly smaller than `aptrb[j]` for some `j`.

`MSK_RES_ERR_MUL_A_ELEMENT` (1254)

 An element in `A` is defined multiple times.

`MSK_RES_ERR_INV_BK` (1255)

 Invalid bound key.

`MSK_RES_ERR_INV_BKC` (1256)

 Invalid bound key is specified for a constraint.

`MSK_RES_ERR_INV_BKX` (1257)

 An invalid bound key is specified for a variable.

`MSK_RES_ERR_INV_VAR_TYPE` (1258)

 An invalid variable type is specified for a variable.

`MSK_RES_ERR_SOLVER_PROBTYPE` (1259)

 Problem type does not match the chosen optimizer.

`MSK_RES_ERR_OBJECTIVE_RANGE` (1260)

 Empty objective range.

`MSK_RES_ERR_INV_RESPCODE` (1261)

 Invalid response code.

`MSK_RES_ERR_INV_IINF` (1262)

 Invalid integer information item.

`MSK_RES_ERR_INV_LIINF` (1263)

 Invalid long integer information item.

`MSK_RES_ERR_INV_DINF` (1264)

 Invalid double information item.

`MSK_RES_ERR_BASIS` (1266)

 An invalid basis is specified. Either too many or too few basis variables are specified.

`MSK_RES_ERR_INV_SKC` (1267)

 Invalid value in `skc`.

`MSK_RES_ERR_INV_SKX` (1268)

 Invalid value in `skx`.

`MSK_RES_ERR_INV_SKN` (1274)

 Invalid value in `skn`.

`MSK_RES_ERR_INV_SK_STR` (1269)

 Invalid status key string encountered.

`MSK_RES_ERR_INV_SK` (1270)

 Invalid status key code.

`MSK_RES_ERR_INV_CONE_TYPE_STR` (1271)

 Invalid cone type string encountered.

`MSK_RES_ERR_INV_CONE_TYPE` (1272)

 Invalid cone type code is encountered.

`MSK_RES_ERR_INVALID_SURPLUS` (1275)

 Invalid surplus.

`MSK_RES_ERR_INV_NAME_ITEM` (1280)

 An invalid name item code is used.

`MSK_RES_ERR_PRO_ITEM` (1281)

 An invalid problem is used.

`MSK_RES_ERR_INVALID_FORMAT_TYPE` (1283)

 Invalid format type.

`MSK_RES_ERR_FIRSTI` (1285)

 Invalid `firsti`.

`MSK_RES_ERR_LASTI` (1286)

 Invalid `lasti`.

MSK_RES_ERR_FIRSTJ (1287)

 Invalid `firstj`.

MSK_RES_ERR_LASTJ (1288)

 Invalid `lastj`.

MSK_RES_ERR_MAX_LEN_IS_TOO_SMALL (1289)

 A maximum length that is too small has been specified.

MSK_RES_ERR_NONLINEAR_EQUALITY (1290)

 The model contains a nonlinear equality which defines a nonconvex set.

MSK_RES_ERR_NONCONVEX (1291)

 The optimization problem is nonconvex.

MSK_RES_ERR_NONLINEAR_RANGED (1292)

 Nonlinear constraints with finite lower and upper bound always define a nonconvex feasible set.

MSK_RES_ERR_CON_Q_NOT_PSD (1293)

 The quadratic constraint matrix is not positive semidefinite as expected for a constraint with finite upper bound. This results in a nonconvex problem.

MSK_RES_ERR_CON_Q_NOT_NSD (1294)

 The quadratic constraint matrix is not negative semidefinite as expected for a constraint with finite lower bound. This results in a nonconvex problem.

MSK_RES_ERR_OBJ_Q_NOT_PSD (1295)

 The quadratic coefficient matrix in the objective is not positive semidefinite as expected for a minimization problem.

MSK_RES_ERR_OBJ_Q_NOT_NSD (1296)

 The quadratic coefficient matrix in the objective is not negative semidefinite as expected for a maximization problem.

MSK_RES_ERR_ARGUMENT_PERM_ARRAY (1299)

 An invalid permutation array is specified.

MSK_RES_ERR_CONE_INDEX (1300)

 An index of a non-existing cone has been specified.

MSK_RES_ERR_CONE_SIZE (1301)

 A cone with incorrect number of members is specified.

MSK_RES_ERR_CONE_OVERLAP (1302)

 One or more of the variables in the cone to be added is already member of another cone. Now assume the variable is x_j then add a new variable say x_k and the constraint

$$x_j = x_k$$

 and then let x_k be member of the cone to be appended.

MSK_RES_ERR_CONE_VAR (1303)

 A variable is included multiple times in the cone.

MSK_RES_ERR_MAXNUMCONE (1304)

 The value specified for `maxnumcone` is too small.

MSK_RES_ERR_CONE_TYPE (1305)

 Invalid cone type specified.

MSK_RES_ERR_CONE_TYPE_STR (1306)

 Invalid cone type specified.

MSK_RES_ERR_CONE_OVERLAP_APPEND (1307)

 The cone to be appended has one variable which is already member of another cone.

MSK_RES_ERR_REMOVE_CONE_VARIABLE (1310)

 A variable cannot be removed because it will make a cone invalid.

MSK_RES_ERR_APPENDING_TOO_BIG_CONE (1311)

 Trying to append a too big cone.

MSK_RES_ERR_CONE_PARAMETER (1320)

 An invalid cone parameter.

`MSK_RES_ERR_SOL_FILE_INVALID_NUMBER` (1350)

An invalid number is specified in a solution file.

`MSK_RES_ERR_HUGE_C` (1375)

A huge value in absolute size is specified for one c_j .

`MSK_RES_ERR_HUGE_AIJ` (1380)

A numerically huge value is specified for an $a_{i,j}$ element in A . The parameter

`MSK_DPAR_DATA_TOL_AIJ_HUGE` controls when an $a_{i,j}$ is considered huge.

`MSK_RES_ERR_DUPLICATE_AIJ` (1385)

An element in the A matrix is specified twice.

`MSK_RES_ERR_LOWER_BOUND_IS_A_NAN` (1390)

The lower bound specified is not a number (nan).

`MSK_RES_ERR_UPPER_BOUND_IS_A_NAN` (1391)

The upper bound specified is not a number (nan).

`MSK_RES_ERR_INFINITE_BOUND` (1400)

A numerically huge bound value is specified.

`MSK_RES_ERR_INV_QOBJ_SUBI` (1401)

Invalid value in `qosubi`.

`MSK_RES_ERR_INV_QOBJ_SUBJ` (1402)

Invalid value in `qosubj`.

`MSK_RES_ERR_INV_QOBJ_VAL` (1403)

Invalid value in `qoval`.

`MSK_RES_ERR_INV_QCON_SUBK` (1404)

Invalid value in `qcsubk`.

`MSK_RES_ERR_INV_QCON_SUBI` (1405)

Invalid value in `qcsubi`.

`MSK_RES_ERR_INV_QCON_SUBJ` (1406)

Invalid value in `qcsubj`.

`MSK_RES_ERR_INV_QCON_VAL` (1407)

Invalid value in `qcval`.

`MSK_RES_ERR_QCON_SUBI_TOO_SMALL` (1408)

Invalid value in `qcsubi`.

`MSK_RES_ERR_QCON_SUBI_TOO_LARGE` (1409)

Invalid value in `qcsubi`.

`MSK_RES_ERR_QOBJ_UPPER_TRIANGLE` (1415)

An element in the upper triangle of Q^o is specified. Only elements in the lower triangle should be specified.

`MSK_RES_ERR_QCON_UPPER_TRIANGLE` (1417)

An element in the upper triangle of a Q^k is specified. Only elements in the lower triangle should be specified.

`MSK_RES_ERR_FIXED_BOUND_VALUES` (1420)

A fixed constraint/variable has been specified using the bound keys but the numerical value of the lower and upper bound is different.

`MSK_RES_ERR_TOO_SMALL_A_TRUNCATION_VALUE` (1421)

A too small value for the A truncation value is specified.

`MSK_RES_ERR_INVALID_OBJECTIVE_SENSE` (1445)

An invalid objective sense is specified.

`MSK_RES_ERR_UNDEFINED_OBJECTIVE_SENSE` (1446)

The objective sense has not been specified before the optimization.

`MSK_RES_ERR_Y_IS_UNDEFINED` (1449)

The solution item y is undefined.

`MSK_RES_ERR_NAN_IN_DOUBLE_DATA` (1450)

An invalid floating point value was used in some double data.

`MSK_RES_ERR_INF_IN_DOUBLE_DATA` (1451)

An infinite floating point value was used in some double data.

`MSK_RES_ERR_NAN_IN_BLC` (1461)

l^c contains an invalid floating point value, i.e. a `Nan` or `Inf`.

`MSK_RES_ERR_NAN_IN_BUC` (1462)

u^c contains an invalid floating point value, i.e. a `Nan` or `Inf`.

`MSK_RES_ERR_INVALID_CFIX` (1469)

An invalid fixed term in the objective is specified.

`MSK_RES_ERR_NAN_IN_C` (1470)

c contains an invalid floating point value, i.e. a `Nan` or `Inf`.

`MSK_RES_ERR_NAN_IN_BLX` (1471)

l^x contains an invalid floating point value, i.e. a `Nan` or `Inf`.

`MSK_RES_ERR_NAN_IN_BUX` (1472)

u^x contains an invalid floating point value, i.e. a `Nan` or `Inf`.

`MSK_RES_ERR_INVALID_AIJ` (1473)

$a_{i,j}$ contains an invalid floating point value, i.e. a `Nan` or an infinite value.

`MSK_RES_ERR_INVALID_CJ` (1474)

c_j contains an invalid floating point value, i.e. a `Nan` or an infinite value.

`MSK_RES_ERR_SYM_MAT_INVALID` (1480)

A symmetric matrix contains an invalid floating point value, i.e. a `Nan` or an infinite value.

`MSK_RES_ERR_SYM_MAT_HUGE` (1482)

A symmetric matrix contains a huge value in absolute size. The parameter

`MSK_DPAR_DATA_SYM_MAT_TOL_HUGE` controls when an $e_{i,j}$ is considered huge.

`MSK_RES_ERR_INV_PROBLEM` (1500)

Invalid problem type. Probably a nonconvex problem has been specified.

`MSK_RES_ERR_MIXED_CONIC_AND_NL` (1501)

The problem contains nonlinear terms conic constraints. The requested operation cannot be applied to this type of problem.

`MSK_RES_ERR_GLOBAL_INV_CONIC_PROBLEM` (1503)

The global optimizer can only be applied to problems without semidefinite variables.

`MSK_RES_ERR_INV_OPTIMIZER` (1550)

An invalid optimizer has been chosen for the problem.

`MSK_RES_ERR_MIO_NO_OPTIMIZER` (1551)

No optimizer is available for the current class of integer optimization problems.

`MSK_RES_ERR_NO_OPTIMIZER_VAR_TYPE` (1552)

No optimizer is available for this class of optimization problems.

`MSK_RES_ERR_FINAL SOLUTION` (1560)

An error occurred during the solution finalization.

`MSK_RES_ERR_FIRST` (1570)

Invalid first.

`MSK_RES_ERR_LAST` (1571)

Invalid index last. A given index was out of expected range.

`MSK_RES_ERR_SLICE_SIZE` (1572)

Invalid slice size specified.

`MSK_RES_ERR_NEGATIVE_SURPLUS` (1573)

Negative surplus.

`MSK_RES_ERR_NEGATIVE_APPEND` (1578)

Cannot append a negative number.

`MSK_RES_ERR_POSTSOLVE` (1580)

An error occurred during the postsolve. Please contact **MOSEK** support.

`MSK_RES_ERR_OVERFLOW` (1590)

A computation produced an overflow i.e. a very large number.

MSK_RES_ERR_NO_BASIS_SOL (1600)

No basic solution is defined.

MSK_RES_ERR_BASIS_FACTOR (1610)

The factorization of the basis is invalid.

MSK_RES_ERR_BASIS_SINGULAR (1615)

The basis is singular and hence cannot be factored.

MSK_RES_ERR_FACTOR (1650)

An error occurred while factorizing a matrix.

MSK_RES_ERR_FEASREPAIR_CANNOT_RELAX (1700)

An optimization problem cannot be relaxed.

MSK_RES_ERR_FEASREPAIR_SOLVING_RELAXED (1701)

The relaxed problem could not be solved to optimality. Please consult the log file for further details.

MSK_RES_ERR_FEASREPAIR_INCONSISTENT_BOUND (1702)

The upper bound is less than the lower bound for a variable or a constraint. Please correct this before running the feasibility repair.

MSK_RES_ERR_REPAIR_INVALID_PROBLEM (1710)

The feasibility repair does not support the specified problem type.

MSK_RES_ERR_REPAIR_OPTIMIZATION_FAILED (1711)

Computation the optimal relaxation failed. The cause may have been numerical problems.

MSK_RES_ERR_NAME_MAX_LEN (1750)

A name is longer than the buffer that is supposed to hold it.

MSK_RES_ERR_NAME_IS_NULL (1760)

The name buffer is a NULL pointer.

MSK_RES_ERR_INVALID_COMPRESSION (1800)

Invalid compression type.

MSK_RES_ERR_INVALID_IOMODE (1801)

Invalid io mode.

MSK_RES_ERR_NO_PRIMAL_INFEAS_CER (2000)

A certificate of primal infeasibility is not available.

MSK_RES_ERR_NO_DUAL_INFEAS_CER (2001)

A certificate of infeasibility is not available.

MSK_RES_ERR_NO SOLUTION_IN_CALLBACK (2500)

The required solution is not available.

MSK_RES_ERR_INV_MARKI (2501)

Invalid value in marki.

MSK_RES_ERR_INV_MARKJ (2502)

Invalid value in markj.

MSK_RES_ERR_INV_NUMI (2503)

Invalid numi.

MSK_RES_ERR_INV_NUMJ (2504)

Invalid numj.

MSK_RES_ERR_TASK_INCOMPATIBLE (2560)

The Task file is incompatible with this platform. This results from reading a file on a 32 bit platform generated on a 64 bit platform.

MSK_RES_ERR_TASK_INVALID (2561)

The Task file is invalid.

MSK_RES_ERR_TASK_WRITE (2562)

Failed to write the task file.

MSK_RES_ERR_READ_WRITE (2563)

Failed to read or write due to an I/O error.

MSK_RES_ERR_TASK_PREMATURE_EOF (2564)

The Task file ended prematurely.

`MSK_RES_ERR_LU_MAX_NUM_TRIES` (2800)

Could not compute the LU factors of the matrix within the maximum number of allowed tries.

`MSK_RES_ERR_INVALID_UTF8` (2900)

An invalid UTF8 string is encountered.

`MSK_RES_ERR_INVALID_WCHAR` (2901)

An invalid `wchar` string is encountered.

`MSK_RES_ERR_NO_DUAL_FOR_ITG_SOL` (2950)

No dual information is available for the integer solution.

`MSK_RES_ERR_NO_SNX_FOR_BAS_SOL` (2953)

s_n^x is not available for the basis solution.

`MSK_RES_ERR_INTERNAL` (3000)

An internal error occurred. Please report this problem.

`MSK_RES_ERR_API_ARRAY_TOO_SMALL` (3001)

An input array was too short.

`MSK_RES_ERR_API_CB_CONNECT` (3002)

Failed to connect a callback object.

`MSK_RES_ERR_API_FATAL_ERROR` (3005)

An internal error occurred in the API. Please report this problem.

`MSK_RES_ERR_API_INTERNAL` (3999)

An internal fatal error occurred in an interface function.

`MSK_RES_ERR_SEN_FORMAT` (3050)

Syntax error in sensitivity analysis file.

`MSK_RES_ERR_SEN_UNDEF_NAME` (3051)

An undefined name was encountered in the sensitivity analysis file.

`MSK_RES_ERR_SEN_INDEX_RANGE` (3052)

Index out of range in the sensitivity analysis file.

`MSK_RES_ERR_SEN_BOUND_INVALID_UP` (3053)

Analysis of upper bound requested for an index, where no upper bound exists.

`MSK_RES_ERR_SEN_BOUND_INVALID_LO` (3054)

Analysis of lower bound requested for an index, where no lower bound exists.

`MSK_RES_ERR_SEN_INDEX_INVALID` (3055)

Invalid range given in the sensitivity file.

`MSK_RES_ERR_SEN_INVALID_REGEXP` (3056)

Syntax error in regexp or regexp longer than 1024.

`MSK_RES_ERR_SEN SOLUTION_STATUS` (3057)

No optimal solution found to the original problem given for sensitivity analysis.

`MSK_RES_ERR_SEN_NUMERICAL` (3058)

Numerical difficulties encountered performing the sensitivity analysis.

`MSK_RES_ERR_SEN_UNHANDLED_PROBLEM_TYPE` (3080)

Sensitivity analysis cannot be performed for the specified problem. Sensitivity analysis is only possible for linear problems.

`MSK_RES_ERR_UNB_STEP_SIZE` (3100)

A step size in an optimizer was unexpectedly unbounded. For instance, if the step-size becomes unbounded in phase 1 of the simplex algorithm then an error occurs. Normally this will happen only if the problem is badly formulated. Please contact **MOSEK** support if this error occurs.

`MSK_RES_ERR_IDENTICAL_TASKS` (3101)

Some tasks related to this function call were identical. Unique tasks were expected.

`MSK_RES_ERR_AD_INVALID_CODELIST` (3102)

The code list data was invalid.

`MSK_RES_ERR_INTERNAL_TEST_FAILED` (3500)

An internal unit test function failed.

MSK_RES_ERR_INT64_TO_INT32_CAST (3800)

A 64 bit integer could not be cast to a 32 bit integer.

MSK_RES_ERR_INFEAS_UNDEFINED (3910)

The requested value is not defined for this solution type.

MSK_RES_ERR_NO_BARX_FOR SOLUTION (3915)

There is no \bar{X} available for the solution specified. In particular note there are no \bar{X} defined for the basic and integer solutions.

MSK_RES_ERR_NO_BARS_FOR SOLUTION (3916)

There is no \bar{s} available for the solution specified. In particular note there are no \bar{s} defined for the basic and integer solutions.

MSK_RES_ERR_BAR_VAR_DIM (3920)

The dimension of a symmetric matrix variable has to be greater than 0.

MSK_RES_ERR_SYM_MAT_INVALID_ROW_INDEX (3940)

A row index specified for sparse symmetric matrix is invalid.

MSK_RES_ERR_SYM_MAT_INVALID_COL_INDEX (3941)

A column index specified for sparse symmetric matrix is invalid.

MSK_RES_ERR_SYM_MAT_NOT_LOWER_TRINGULAR (3942)

Only the lower triangular part of sparse symmetric matrix should be specified.

MSK_RES_ERR_SYM_MAT_INVALID_VALUE (3943)

The numerical value specified in a sparse symmetric matrix is not a floating point value.

MSK_RES_ERR_SYM_MAT_DUPLICATE (3944)

A value in a symmetric matrix has been specified more than once.

MSK_RES_ERR_INVALID_SYM_MAT_DIM (3950)

A sparse symmetric matrix of invalid dimension is specified.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_SYM_MAT (4000)

The file format does not support a problem with symmetric matrix variables.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_CFIX (4001)

The file format does not support a problem with nonzero fixed term in c.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_RANGED_CONSTRAINTS (4002)

The file format does not support a problem with ranged constraints.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_FREE_CONSTRAINTS (4003)

The file format does not support a problem with free constraints.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_CONES (4005)

The file format does not support a problem with the simple cones (deprecated).

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_QUADRATIC_TERMS (4006)

The file format does not support a problem with quadratic terms.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_NONLINEAR (4010)

The file format does not support a problem with nonlinear terms.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_DISJUNCTIVE_CONSTRAINTS (4011)

The file format does not support a problem with disjunctive constraints.

MSK_RES_ERR_INVALID_FILE_FORMAT_FOR_AFFINE_CONIC_CONSTRAINTS (4012)

The file format does not support a problem with affine conic constraints.

MSK_RES_ERR_DUPLICATE_CONSTRAINT_NAMES (4500)

Two constraint names are identical.

MSK_RES_ERR_DUPLICATE_VARIABLE_NAMES (4501)

Two variable names are identical.

MSK_RES_ERR_DUPLICATE_BARVARIABLE_NAMES (4502)

Two barvariable names are identical.

MSK_RES_ERR_DUPLICATE_CONE_NAMES (4503)

Two cone names are identical.

MSK_RES_ERR_DUPLICATE_DOMAIN_NAMES (4504)

Two domain names are identical.

`MSK_RES_ERR_DUPLICATE_DJC_NAMES` (4505)

Two disjunctive constraint names are identical.

`MSK_RES_ERR_NON_UNIQUE_ARRAY` (5000)

An array does not contain unique elements.

`MSK_RES_ERR_ARGUMENT_IS_TOO_SMALL` (5004)

The value of a function argument is too small.

`MSK_RES_ERR_ARGUMENT_IS_TOO_LARGE` (5005)

The value of a function argument is too large.

`MSK_RES_ERR_MIO_INTERNAL` (5010)

A fatal error occurred in the mixed integer optimizer. Please contact **MOSEK** support.

`MSK_RES_ERR_INVALID_PROBLEM_TYPE` (6000)

An invalid problem type.

`MSK_RES_ERR_UNHANDLED SOLUTION_STATUS` (6010)

Unhandled solution status.

`MSK_RES_ERR_UPPER_TRIANGLE` (6020)

An element in the upper triangle of a lower triangular matrix is specified.

`MSK_RES_ERR_LAU_SINGULAR_MATRIX` (7000)

A matrix is singular.

`MSK_RES_ERR_LAU_NOT_POSITIVE_DEFINITE` (7001)

A matrix is not positive definite.

`MSK_RES_ERR_LAU_INVALID_LOWER_TRIANGULAR_MATRIX` (7002)

An invalid lower triangular matrix.

`MSK_RES_ERR_LAU_UNKNOWN` (7005)

An unknown error.

`MSK_RES_ERR_LAU_ARG_M` (7010)

Invalid argument m.

`MSK_RES_ERR_LAU_ARG_N` (7011)

Invalid argument n.

`MSK_RES_ERR_LAU_ARG_K` (7012)

Invalid argument k.

`MSK_RES_ERR_LAU_ARG_TRANSA` (7015)

Invalid argument transa.

`MSK_RES_ERR_LAU_ARG_TRANSB` (7016)

Invalid argument transb.

`MSK_RES_ERR_LAU_ARG_UPLO` (7017)

Invalid argument uplo.

`MSK_RES_ERR_LAU_ARG_TRANS` (7018)

Invalid argument trans.

`MSK_RES_ERR_LAU_INVALID_SPARSE_SYMMETRIC_MATRIX` (7019)

An invalid sparse symmetric matrix is specified. Note only the lower triangular part with no duplicates is specified.

`MSK_RES_ERR_CBF_PARSE` (7100)

An error occurred while parsing an CBF file.

`MSK_RES_ERR_CBF_OBJ_SENSE` (7101)

An invalid objective sense is specified.

`MSK_RES_ERR_CBF_NO_VARIABLES` (7102)

No variables are specified.

`MSK_RES_ERR_CBF_TOO_MANY_CONSTRAINTS` (7103)

Too many constraints specified.

`MSK_RES_ERR_CBF_TOO_MANY_VARIABLES` (7104)

Too many variables specified.

MSK_RES_ERR_CBF_NO_VERSION_SPECIFIED (7105)
 No version specified.

MSK_RES_ERR_CBF_SYNTAX (7106)
 Invalid syntax.

MSK_RES_ERR_CBF_DUPLICATE_OBJ (7107)
 Duplicate OBJ keyword.

MSK_RES_ERR_CBF_DUPLICATE_CON (7108)
 Duplicate CON keyword.

MSK_RES_ERR_CBF_DUPLICATE_VAR (7110)
 Duplicate VAR keyword.

MSK_RES_ERR_CBF_DUPLICATE_INT (7111)
 Duplicate INT keyword.

MSK_RES_ERR_CBF_INVALID_VAR_TYPE (7112)
 Invalid variable type.

MSK_RES_ERR_CBF_INVALID_CONSTRAINT_TYPE (7113)
 Invalid constraint type.

MSK_RES_ERR_CBF_INVALID_DOMAIN_DIMENSION (7114)
 Invalid domain dimension.

MSK_RES_ERR_CBF_DUPLICATE_OBJCOORD (7115)
 Duplicate index in OBJCOORD.

MSK_RES_ERR_CBF_DUPLICATE_BCOORD (7116)
 Duplicate index in BCOORD.

MSK_RES_ERR_CBF_DUPLICATE_ACOORD (7117)
 Duplicate index in ACOORD.

MSK_RES_ERR_CBF_TOO_FEW_VARIABLES (7118)
 Too few variables defined.

MSK_RES_ERR_CBF_TOO_FEW_CONSTRAINTS (7119)
 Too few constraints defined.

MSK_RES_ERR_CBF_TOO_FEW_INTS (7120)
 Too few ints are specified.

MSK_RES_ERR_CBF_TOO_MANY_INTS (7121)
 Too many ints are specified.

MSK_RES_ERR_CBF_INVALID_INT_INDEX (7122)
 Invalid INT index.

MSK_RES_ERR_CBF_UNSUPPORTED (7123)
 Unsupported feature is present.

MSK_RES_ERR_CBF_DUPLICATE_PSDVAR (7124)
 Duplicate PSDVAR keyword.

MSK_RES_ERR_CBF_INVALID_PSDVAR_DIMENSION (7125)
 Invalid PSDVAR dimension.

MSK_RES_ERR_CBF_TOO_FEW_PSDVAR (7126)
 Too few variables defined.

MSK_RES_ERR_CBF_INVALID_EXP_DIMENSION (7127)
 Invalid dimension of a exponential cone.

MSK_RES_ERR_CBF_DUPLICATE_POW_CONES (7130)
 Multiple POWCONES specified.

MSK_RES_ERR_CBF_DUPLICATE_POW_STAR_CONES (7131)
 Multiple POW*CONES specified.

MSK_RES_ERR_CBF_INVALID_POWER (7132)
 Invalid power specified.

MSK_RES_ERR_CBF_POWER_CONE_IS_TOO_LONG (7133)
 Power cone is too long.

MSK_RES_ERR_CBF_INVALID_POWER_CONE_INDEX (7134)
 Invalid power cone index.

MSK_RES_ERR_CBF_INVALID_POWER_STAR_CONE_INDEX (7135)
 Invalid power star cone index.

MSK_RES_ERR_CBF_UNHANDLED_POWER_CONE_TYPE (7136)
 An unhandled power cone type.

MSK_RES_ERR_CBF_UNHANDLED_POWER_STAR_CONE_TYPE (7137)
 An unhandled power star cone type.

MSK_RES_ERR_CBF_POWER_CONE_MISMATCH (7138)
 The power cone does not match with its definition.

MSK_RES_ERR_CBF_POWER_STAR_CONE_MISMATCH (7139)
 The power star cone does not match with its definition.

MSK_RES_ERR_CBF_INVALID_NUMBER_OF_CONES (7140)
 Invalid number of cones.

MSK_RES_ERR_CBF_INVALID_DIMENSION_OF_CONES (7141)
 Invalid number of cones.

MSK_RES_ERR_CBF_INVALID_NUM_OBJACOORD (7150)
 Invalid number of OBJACOORD.

MSK_RES_ERR_CBF_INVALID_NUM_OBJFCOORD (7151)
 Invalid number of OBJFCOORD.

MSK_RES_ERR_CBF_INVALID_NUM_ACOORD (7152)
 Invalid number of ACOORD.

MSK_RES_ERR_CBF_INVALID_NUM_BCOORD (7153)
 Invalid number of BCOORD.

MSK_RES_ERR_CBF_INVALID_NUM_FCOORD (7155)
 Invalid number of FCOORD.

MSK_RES_ERR_CBF_INVALID_NUM_HCOORD (7156)
 Invalid number of HCOORD.

MSK_RES_ERR_CBF_INVALID_NUM_DCOORD (7157)
 Invalid number of DCOORD.

MSK_RES_ERR_CBF_EXPECTED_A_KEYWORD (7158)
 Expected a key word.

MSK_RES_ERR_CBF_INVALID_NUM_PSDCON (7200)
 Invalid number of PSDCON.

MSK_RES_ERR_CBF_DUPLICATE_PSDCON (7201)
 Duplicate CON keyword.

MSK_RES_ERR_CBF_INVALID_DIMENSION_OF_PSDCON (7202)
 Invalid PSDCON dimension.

MSK_RES_ERR_CBF_INVALID_PSDCON_INDEX (7203)
 Invalid PSDCON index.

MSK_RES_ERR_CBF_INVALID_PSDCON_VARIABLE_INDEX (7204)
 Invalid PSDCON index.

MSK_RES_ERR_CBF_INVALID_PSDCON_BLOCK_INDEX (7205)
 Invalid PSDCON index.

MSK_RES_ERR_CBF_UNSUPPORTED_CHANGE (7210)
 The CHANGE section is not supported.

MSK_RES_ERR_MIO_INVALID_ROOT_OPTIMIZER (7700)
 An invalid root optimizer was selected for the problem type.

MSK_RES_ERR_MIO_INVALID_NODE_OPTIMIZER (7701)
 An invalid node optimizer was selected for the problem type.

MSK_RES_ERR_MPS_WRITE_CPLEX_INVALID_CONE_TYPE (7750)
 An invalid cone type occurs when writing a CPLEX formatted MPS file.

`MSK_RES_ERR_TOCONIC_CONSTR_Q_NOT_PSD` (7800)

The matrix defining the quadratic part of constraint is not positive semidefinite.

`MSK_RES_ERR_TOCONIC_CONSTRAINT_FX` (7801)

The quadratic constraint is an equality, thus not convex.

`MSK_RES_ERR_TOCONIC_CONSTRAINT_RA` (7802)

The quadratic constraint has finite lower and upper bound, and therefore it is not convex.

`MSK_RES_ERR_TOCONIC_CONSTR_NOT_CONIC` (7803)

The constraint is not conic representable.

`MSK_RES_ERR_TOCONIC_OBJECTIVE_NOT_PSD` (7804)

The matrix defining the quadratic part of the objective function is not positive semidefinite.

`MSK_RES_ERR_GETDUAL_NOT_AVAILABLE` (7820)

The simple dualizer is not available for this problem class.

`MSK_RES_ERR_SERVER_CONNECT` (8000)

Failed to connect to remote solver server. The server string or the port string were invalid, or the server did not accept connection.

`MSK_RES_ERR_SERVER_PROTOCOL` (8001)

Unexpected message or data from solver server.

`MSK_RES_ERR_SERVER_STATUS` (8002)

Server returned non-ok HTTP status code

`MSK_RES_ERR_SERVER_TOKEN` (8003)

The job ID specified is incorrect or invalid

`MSK_RES_ERR_SERVER_ADDRESS` (8004)

Invalid address string

`MSK_RES_ERR_SERVER_CERTIFICATE` (8005)

Invalid TLS certificate format or path

`MSK_RES_ERR_SERVER_TLS_CLIENT` (8006)

Failed to create TLS cleint

`MSK_RES_ERR_SERVER_ACCESS_TOKEN` (8007)

Invalid access token

`MSK_RES_ERR_SERVER_PROBLEM_SIZE` (8008)

The size of the problem exceeds the dimensions permitted by the instance of the OptServer where it was run.

`MSK_RES_ERR_SERVER_HARD_TIMEOUT` (8009)

The hard timeout limit was reached on solver server, and the solver process was killed

`MSK_RES_ERR_DUPLICATE_INDEX_IN_A_SPARSE_MATRIX` (20050)

An element in a sparse matrix is specified twice.

`MSK_RES_ERR_DUPLICATE_INDEX_IN_AFEIDX_LIST` (20060)

An index is specified twice in an affine expression list.

`MSK_RES_ERR_DUPLICATE_FIJ` (20100)

An element in the F matrix is specified twice.

`MSK_RES_ERR_INVALID_FIJ` (20101)

$f_{i,j}$ contains an invalid floating point value, i.e. a NaN or an infinite value.

`MSK_RES_ERR_HUGE_FIJ` (20102)

A numerically huge value is specified for an $f_{i,j}$ element in F . The parameter

`MSK_DPAR_DATA_TOL_AIJ_HUGE` controls when an $f_{i,j}$ is considered huge.

`MSK_RES_ERR_INVALID_G` (20103)

g contains an invalid floating point value, i.e. a NaN or an infinite value.

`MSK_RES_ERR_INVALID_B` (20150)

b contains an invalid floating point value, i.e. a NaN or an infinite value.

`MSK_RES_ERR_DOMAIN_INVALID_INDEX` (20400)

A domain index is invalid.

`MSK_RES_ERR_DOMAIN_DIMENSION` (20401)

A domain dimension is invalid.

MSK_RES_ERR_DOMAIN_DIMENSION_PSD (20402)

A PSD domain dimension is invalid.

MSK_RES_ERR_NOT_POWER_DOMAIN (20403)

The function is only applicable to primal and dual power cone domains.

MSK_RES_ERR_DOMAIN_POWER_INVALID_ALPHA (20404)

Alpha contains an invalid floating point value, i.e. a NaN or an infinite value.

MSK_RES_ERR_DOMAIN_POWER_NEGATIVE_ALPHA (20405)

Alpha contains a negative value or zero.

MSK_RES_ERR_DOMAIN_POWER_NLEFT (20406)

The value of n_{left} is not in $[1, n - 1]$ where n is the dimension.

MSK_RES_ERR_AFE_INVALID_INDEX (20500)

An affine expression index is invalid.

MSK_RES_ERR_ACC_INVALID_INDEX (20600)

A affine conic constraint index is invalid.

MSK_RES_ERR_ACC_INVALID_ENTRY_INDEX (20601)

The index of an element in an affine conic constraint is invalid.

MSK_RES_ERR_ACC_AFE_DOMAIN_MISMATCH (20602)

There is a mismatch between between the number of affine expressions and total dimension of the domain(s).

MSK_RES_ERR_DJC_INVALID_INDEX (20700)

A disjunctive constraint index is invalid.

MSK_RES_ERR_DJC_UNSUPPORTED_DOMAIN_TYPE (20701)

An unsupported domain type has been used in a disjunctive constraint.

MSK_RES_ERR_DJC_AFE_DOMAIN_MISMATCH (20702)

There is a mismatch between the number of affine expressions and total dimension of the domain(s).

MSK_RES_ERR_DJC_INVALID_TERM_SIZE (20703)

A termize is invalid.

MSK_RES_ERR_DJC_DOMAIN_TERMSIZE_MISMATCH (20704)

There is a mismatch between the number of domains and the term sizes.

MSK_RES_ERR_DJC_TOTAL_NUM_TERMS_MISMATCH (20705)

There total number of terms in all domains does not match.

MSK_RES_ERR_UNDEF SOLUTION (22000)

MOSEK has the following solution types:

- an interior-point solution,
- a basic solution,
- and an integer solution.

Each optimizer may set one or more of these solutions; e.g by default a successful optimization with the interior-point optimizer defines the interior-point solution and, for linear problems, also the basic solution. This error occurs when asking for a solution or for information about a solution that is not defined.

MSK_RES_ERR_NO_DOTY (22010)

No doty is available

10.4 Constants

10.4.1 Basis identification

MSK_BI_NEVER

Never do basis identification.

MSK_BI_ALWAYS

Basis identification is always performed even if the interior-point optimizer terminates abnormally.

MSK_BI_NO_ERROR

Basis identification is performed if the interior-point optimizer terminates without an error.

MSK_BI_IF_FEASIBLE

Basis identification is not performed if the interior-point optimizer terminates with a problem status saying that the problem is primal or dual infeasible.

MSK_BI_RESERVED

Not currently in use.

10.4.2 Bound keys

MSK_BK_LO

The constraint or variable has a finite lower bound and an infinite upper bound.

MSK_BK_UP

The constraint or variable has an infinite lower bound and an finite upper bound.

MSK_BK_FX

The constraint or variable is fixed.

MSK_BK_FR

The constraint or variable is free.

MSK_BK_RA

The constraint or variable is ranged.

10.4.3 Mark

MSK_MARK_LO

The lower bound is selected for sensitivity analysis.

MSK_MARK_UP

The upper bound is selected for sensitivity analysis.

10.4.4 Experimental. Usage not recommended.

MSK_SIM_PRECISION_NORMAL

Experimental. Usage not recommended.

MSK_SIM_PRECISION_EXTENDED

Experimental. Usage not recommended.

10.4.5 Degeneracy strategies

MSK_SIM_DEGEN_NONE

The simplex optimizer should use no degeneration strategy.

MSK_SIM_DEGEN_FREE

The simplex optimizer chooses the degeneration strategy.

MSK_SIM_DEGEN.Aggressive

The simplex optimizer should use an aggressive degeneration strategy.

MSK_SIM_DEGEN_MODERATE

The simplex optimizer should use a moderate degeneration strategy.

MSK_SIM_DEGEN_MINIMUM

The simplex optimizer should use a minimum degeneration strategy.

10.4.6 Transposed matrix.

`MSK_TRANSPOSE_NO`

No transpose is applied.

`MSK_TRANSPOSE_YES`

A transpose is applied.

10.4.7 Triangular part of a symmetric matrix.

`MSK_UPLO_LO`

Lower part.

`MSK_UPLO_UP`

Upper part.

10.4.8 Problem reformulation.

`MSK_SIM_REFORMULATION_ON`

Allow the simplex optimizer to reformulate the problem.

`MSK_SIM_REFORMULATION_OFF`

Disallow the simplex optimizer to reformulate the problem.

`MSK_SIM_REFORMULATION_FREE`

The simplex optimizer can choose freely.

`MSK_SIM_REFORMULATION.Aggressive`

The simplex optimizer should use an aggressive reformulation strategy.

10.4.9 Exploit duplicate columns.

`MSK_SIM_EXPLOIT_DUPVEC_ON`

Allow the simplex optimizer to exploit duplicated columns.

`MSK_SIM_EXPLOIT_DUPVEC_OFF`

Disallow the simplex optimizer to exploit duplicated columns.

`MSK_SIM_EXPLOIT_DUPVEC_FREE`

The simplex optimizer can choose freely.

10.4.10 Hot-start type employed by the simplex optimizer

`MSK_SIM_HOTSTART_NONE`

The simplex optimizer performs a coldstart.

`MSK_SIM_HOTSTART_FREE`

The simplex optimizer chooses the hot-start type.

`MSK_SIM_HOTSTART_STATUS_KEYS`

Only the status keys of the constraints and variables are used to choose the type of hot-start.

10.4.11 Hot-start type employed by the interior-point optimizers.

`MSK_INTPNT_HOTSTART_NONE`

The interior-point optimizer performs a coldstart.

`MSK_INTPNT_HOTSTART_PRIMAL`

The interior-point optimizer exploits the primal solution only.

`MSK_INTPNT_HOTSTART_DUAL`

The interior-point optimizer exploits the dual solution only.

`MSK_INTPNT_HOTSTART_PRIMAL_DUAL`

The interior-point optimizer exploits both the primal and dual solution.

10.4.12 Progress callback codes

`MSK_CALLBACK_BEGIN_BI`

The basis identification procedure has been started.

`MSK_CALLBACK_BEGIN_CONIC`

The callback function is called when the conic optimizer is started.

`MSK_CALLBACK_BEGIN_DUAL_BI`

The callback function is called from within the basis identification procedure when the dual phase is started.

`MSK_CALLBACK_BEGIN_DUAL_SENSITIVITY`

Dual sensitivity analysis is started.

`MSK_CALLBACK_BEGIN_DUAL_SETUP_BI`

The callback function is called when the dual BI phase is started.

`MSK_CALLBACK_BEGIN_DUAL_SIMPLEX`

The callback function is called when the dual simplex optimizer started.

`MSK_CALLBACK_BEGIN_DUAL_SIMPLEX_BI`

The callback function is called from within the basis identification procedure when the dual simplex clean-up phase is started.

`MSK_CALLBACK_BEGIN_FOLDING`

The calback function is called at the beginning of folding.

`MSK_CALLBACK_BEGIN_FOLDING_BI`

TBD

`MSK_CALLBACK_BEGIN_FOLDING_BI_DUAL`

TBD

`MSK_CALLBACK_BEGIN_FOLDING_BI_INITIALIZE`

TBD

`MSK_CALLBACK_BEGIN_FOLDING_BI_OPTIMIZER`

TBD

`MSK_CALLBACK_BEGIN_FOLDING_BI_PRIMAL`

TBD

`MSK_CALLBACK_BEGIN_INFEAS_ANA`

The callback function is called when the infeasibility analyzer is started.

`MSK_CALLBACK_BEGIN_INITIALIZE_BI`

The callback function is called from within the basis identification procedure when the initialization phase is started.

`MSK_CALLBACK_BEGIN_INTPNT`

The callback function is called when the interior-point optimizer is started.

`MSK_CALLBACK_BEGIN_LICENSE_WAIT`

Begin waiting for license.

`MSK_CALLBACK_BEGIN_MIO`

The callback function is called when the mixed-integer optimizer is started.

`MSK_CALLBACK_BEGIN_OPTIMIZE_BI`

TBD.

`MSK_CALLBACK_BEGIN_OPTIMIZER`

The callback function is called when the optimizer is started.

`MSK_CALLBACK_BEGIN_PRESOLVE`

The callback function is called when the presolve is started.

`MSK_CALLBACK_BEGIN_PRIMAL_BI`

The callback function is called from within the basis identification procedure when the primal phase is started.

`MSK_CALLBACK_BEGIN_PRIMAL_REPAIR`

Begin primal feasibility repair.

MSK_CALLBACK_BEGIN_PRIMAL_SENSITIVITY

Primal sensitivity analysis is started.

MSK_CALLBACK_BEGIN_PRIMAL_SETUP_BI

The callback function is called when the primal BI setup is started.

MSK_CALLBACK_BEGIN_PRIMAL_SIMPLEX

The callback function is called when the primal simplex optimizer is started.

MSK_CALLBACK_BEGIN_PRIMAL_SIMPLEX_BI

The callback function is called from within the basis identification procedure when the primal simplex clean-up phase is started.

MSK_CALLBACK_BEGIN_QCQO_REFORMULATE

Begin QCQO reformulation.

MSK_CALLBACK_BEGIN_READ

MOSEK has started reading a problem file.

MSK_CALLBACK_BEGIN_ROOT_CUTGEN

The callback function is called when root cut generation is started.

MSK_CALLBACK_BEGIN_SIMPLEX

The callback function is called when the simplex optimizer is started.

MSK_CALLBACK_BEGIN_SOLVE_ROOT_RELAX

The callback function is called when solution of root relaxation is started.

MSK_CALLBACK_BEGIN_TO_CONIC

Begin conic reformulation.

MSK_CALLBACK_BEGIN_WRITE

MOSEK has started writing a problem file.

MSK_CALLBACK_CONIC

The callback function is called from within the conic optimizer after the information database has been updated.

MSK_CALLBACK_DECOMP_MIO

The callback function is called when the dedicated algorithm for independent blocks inside the mixed-integer solver is started.

MSK_CALLBACK_DUAL_SIMPLEX

The callback function is called from within the dual simplex optimizer.

MSK_CALLBACK_END_BI

The callback function is called when the basis identification procedure is terminated.

MSK_CALLBACK_END_CONIC

The callback function is called when the conic optimizer is terminated.

MSK_CALLBACK_END_DUAL_BI

The callback function is called from within the basis identification procedure when the dual phase is terminated.

MSK_CALLBACK_END_DUAL_SENSITIVITY

Dual sensitivity analysis is terminated.

MSK_CALLBACK_END_DUAL_SETUP_BI

The callback function is called when the dual BI phase is terminated.

MSK_CALLBACK_END_DUAL_SIMPLEX

The callback function is called when the dual simplex optimizer is terminated.

MSK_CALLBACK_END_DUAL_SIMPLEX_BI

The callback function is called from within the basis identification procedure when the dual clean-up phase is terminated.

MSK_CALLBACK_END_FOLDING

The callback function is called at the end of folding.

MSK_CALLBACK_END_FOLDING_BI

TBD

MSK_CALLBACK_END_FOLDING_BI_DUAL

TBD

MSK_CALLBACK_END_FOLDING_BI_INITIALIZE
 TBD
MSK_CALLBACK_END_FOLDING_BI_OPTIMIZER
 TBD
MSK_CALLBACK_END_FOLDING_BI_PRIMAL
 TBD
MSK_CALLBACK_END_INFEAS_ANA
 The callback function is called when the infeasibility analyzer is terminated.
MSK_CALLBACK_END_INITIALIZE BI
 The callback function is called from within the basis identification procedure when the initialization phase is terminated.
MSK_CALLBACK_END_INTPNT
 The callback function is called when the interior-point optimizer is terminated.
MSK_CALLBACK_END_LICENSE_WAIT
 End waiting for license.
MSK_CALLBACK_END_MIO
 The callback function is called when the mixed-integer optimizer is terminated.
MSK_CALLBACK_END_OPTIMIZE_BI
 TBD.
MSK_CALLBACK_END_OPTIMIZER
 The callback function is called when the optimizer is terminated.
MSK_CALLBACK_END_PRESOLVE
 The callback function is called when the presolve is completed.
MSK_CALLBACK_END_PRIMAL_BI
 The callback function is called from within the basis identification procedure when the primal phase is terminated.
MSK_CALLBACK_END_PRIMAL_REPAIR
 End primal feasibility repair.
MSK_CALLBACK_END_PRIMAL_SENSITIVITY
 Primal sensitivity analysis is terminated.
MSK_CALLBACK_END_PRIMAL_SETUP_BI
 The callback function is called when the primal BI setup is terminated.
MSK_CALLBACK_END_PRIMAL_SIMPLEX
 The callback function is called when the primal simplex optimizer is terminated.
MSK_CALLBACK_END_PRIMAL_SIMPLEX_BI
 The callback function is called from within the basis identification procedure when the primal clean-up phase is terminated.
MSK_CALLBACK_END_QCQO_REFORMULATE
 End QCQO reformulation.
MSK_CALLBACK_END_READ
MOSEK has finished reading a problem file.
MSK_CALLBACK_END_ROOT_CUTGEN
 The callback function is called when root cut generation is terminated.
MSK_CALLBACK_END_SIMPLEX
 The callback function is called when the simplex optimizer is terminated.
MSK_CALLBACK_END_SIMPLEX_BI
 The callback function is called from within the basis identification procedure when the simplex clean-up phase is terminated.
MSK_CALLBACK_END_SOLVE_ROOT_RELAX
 The callback function is called when solution of root relaxation is terminated.
MSK_CALLBACK_END_TO_CONIC
 End conic reformulation.

MSK_CALLBACK_END_WRITE

MOSEK has finished writing a problem file.

MSK_CALLBACK_FOLDING_BI_DUAL

TBD

MSK_CALLBACK_FOLDING_BI_OPTIMIZER

TBD

MSK_CALLBACK_FOLDING_BI_PRIMAL

TBD

MSK_CALLBACK_HEARTBEAT

A heartbeat callback.

MSK_CALLBACK_IM_DUAL_SENSIVITY

The callback function is called at an intermediate stage of the dual sensitivity analysis.

MSK_CALLBACK_IM_DUAL_SIMPLEX

The callback function is called at an intermediate point in the dual simplex optimizer.

MSK_CALLBACK_IM_LICENSE_WAIT

MOSEK is waiting for a license.

MSK_CALLBACK_IM_LU

The callback function is called from within the LU factorization procedure at an intermediate point.

MSK_CALLBACK_IM_MIO

The callback function is called at an intermediate point in the mixed-integer optimizer.

MSK_CALLBACK_IM_MIO_DUAL_SIMPLEX

The callback function is called at an intermediate point in the mixed-integer optimizer while running the dual simplex optimizer.

MSK_CALLBACK_IM_MIO_INTPNT

The callback function is called at an intermediate point in the mixed-integer optimizer while running the interior-point optimizer.

MSK_CALLBACK_IM_MIO_PRIMAL_SIMPLEX

The callback function is called at an intermediate point in the mixed-integer optimizer while running the primal simplex optimizer.

MSK_CALLBACK_IM_ORDER

The callback function is called from within the matrix ordering procedure at an intermediate point.

MSK_CALLBACK_IM_PRIMAL_SENSIVITY

The callback function is called at an intermediate stage of the primal sensitivity analysis.

MSK_CALLBACK_IM_PRIMAL_SIMPLEX

The callback function is called at an intermediate point in the primal simplex optimizer.

MSK_CALLBACK_IM_READ

Intermediate stage in reading.

MSK_CALLBACK_IM_ROOT_CUTGEN

The callback is called from within root cut generation at an intermediate stage.

MSK_CALLBACK_IM_SIMPLEX

The callback function is called from within the simplex optimizer at an intermediate point.

MSK_CALLBACK_INTPNT

The callback function is called from within the interior-point optimizer after the information database has been updated.

MSK_CALLBACK_NEW_INT_MIO

The callback function is called after a new integer solution has been located by the mixed-integer optimizer.

MSK_CALLBACK_OPTIMIZE_BI

TBD.

MSK_CALLBACK_PRIMAL_SIMPLEX

The callback function is called from within the primal simplex optimizer.

MSK_CALLBACK_QO_REFORMULATE

The callback function is called at an intermediate stage of the conic quadratic reformulation.

`MSK_CALLBACK_READ_OPF`

The callback function is called from the OPF reader.

`MSK_CALLBACK_READ_OPF_SECTION`

A chunk of Q non-zeros has been read from a problem file.

`MSK_CALLBACK_RESTART_MIO`

The callback function is called when the mixed-integer optimizer is restarted.

`MSK_CALLBACK_SOLVING_REMOTE`

The callback function is called while the task is being solved on a remote server.

`MSK_CALLBACK_UPDATE_DUAL_BI`

The callback function is called from within the basis identification procedure at an intermediate point in the dual phase.

`MSK_CALLBACK_UPDATE_DUAL_SIMPLEX`

The callback function is called in the dual simplex optimizer.

`MSK_CALLBACK_UPDATE_DUAL_SIMPLEX_BI`

The callback function is called from within the basis identification procedure at an intermediate point in the dual simplex clean-up phase. The frequency of the callbacks is controlled by the `MSK_IPAR_LOG_SIM_FREQ` parameter.

`MSK_CALLBACK_UPDATE_PRESOLVE`

The callback function is called from within the presolve procedure.

`MSK_CALLBACK_UPDATE_PRIMAL_BI`

The callback function is called from within the basis identification procedure at an intermediate point in the primal phase.

`MSK_CALLBACK_UPDATE_PRIMAL_SIMPLEX`

The callback function is called in the primal simplex optimizer.

`MSK_CALLBACK_UPDATE_PRIMAL_SIMPLEX_BI`

The callback function is called from within the basis identification procedure at an intermediate point in the primal simplex clean-up phase. The frequency of the callbacks is controlled by the `MSK_IPAR_LOG_SIM_FREQ` parameter.

`MSK_CALLBACK_UPDATE_SIMPLEX`

The callback function is called from simplex optimizer.

`MSK_CALLBACK_WRITE_OPF`

The callback function is called from the OPF writer.

10.4.13 Compression types

`MSK_COMPRESS_NONE`

No compression is used.

`MSK_COMPRESS_FREE`

The type of compression used is chosen automatically.

`MSK_COMPRESS_GZIP`

The type of compression used is gzip compatible.

`MSK_COMPRESS_ZSTD`

The type of compression used is zstd compatible.

10.4.14 Cone types

`MSK_CT_QUAD`

The cone is a quadratic cone.

`MSK_CT_RQUAD`

The cone is a rotated quadratic cone.

`MSK_CT_PEXP`

A primal exponential cone.

`MSK_CT_DEXP`

A dual exponential cone.

`MSK_CT_PPOW`

A primal power cone.

`MSK_CT_DPOW`

A dual power cone.

`MSK_CT_ZERO`

The zero cone.

10.4.15 Cone types

`MSK_DOMAIN_R`

R.

`MSK_DOMAIN_RZERO`

The zero vector.

`MSK_DOMAIN_RPLUS`

The positive orthant.

`MSK_DOMAIN_RMINUS`

The negative orthant.

`MSK_DOMAIN_QUADRATIC_CONE`

The quadratic cone.

`MSK_DOMAIN_RQUADRATIC_CONE`

The rotated quadratic cone.

`MSK_DOMAIN_PRIMAL_EXP_CONE`

The primal exponential cone.

`MSK_DOMAIN_DUAL_EXP_CONE`

The dual exponential cone.

`MSK_DOMAIN_PRIMAL_POWER_CONE`

The primal power cone.

`MSK_DOMAIN_DUAL_POWER_CONE`

The dual power cone.

`MSK_DOMAIN_PRIMAL_GEO_MEAN_CONE`

The primal geometric mean cone.

`MSK_DOMAIN_DUAL_GEO_MEAN_CONE`

The dual geometric mean cone.

`MSK_DOMAIN_SVEC_PSD_CONE`

The vectorized positive semidefinite cone.

10.4.16 Name types

MSK_NAME_TYPE_GEN

General names. However, no duplicate and blank names are allowed.

MSK_NAME_TYPE_MPS

MPS type names.

MSK_NAME_TYPE_LP

LP type names.

10.4.17 Cone types

MSK_SYMMAT_TYPE_SPARSE

Sparse symmetric matrix.

10.4.18 Data format types

MSK_DATA_FORMAT_EXTENSION

The file extension is used to determine the data file format.

MSK_DATA_FORMAT_MPS

The data file is MPS formatted.

MSK_DATA_FORMAT_LP

The data file is LP formatted.

MSK_DATA_FORMAT_OP

The data file is an optimization problem formatted file.

MSK_DATA_FORMAT_FREE_MPS

The data a free MPS formatted file.

MSK_DATA_FORMAT_TASK

Generic task dump file.

MSK_DATA_FORMAT_PTF

(P)retty (T)ext (F)ormat.

MSK_DATA_FORMAT_CB

Conic benchmark format,

MSK_DATA_FORMAT_JSON_TASK

JSON based task format.

10.4.19 Data format types

MSK_SOL_FORMAT_EXTENSION

The file extension is used to determine the data file format.

MSK_SOL_FORMAT_B

Simple binary format

MSK_SOL_FORMAT_TASK

Tar based format.

MSK_SOL_FORMAT_JSON_TASK

JSON based format.

10.4.20 Double information items

MSK_DINF_ANA_PRO_SCALARIZED_CONSTRAINT_MATRIX_DENSITY

Density percentage of the scalarized constraint matrix.

MSK_DINF_BI_CLEAN_TIME

Time spent within the clean-up phase of the basis identification procedure since its invocation (in seconds).

MSK_DINF_BI_DUAL_TIME

Time spent within the dual phase basis identification procedure since its invocation (in seconds).

MSK_DINF_BI_PRIMAL_TIME

Time spent within the primal phase of the basis identification procedure since its invocation (in seconds).

MSK_DINF_BI_TIME

Time spent within the basis identification procedure since its invocation (in seconds).

MSK_DINF_FOLDING_BI_OPTIMIZE_TIME

TBD

MSK_DINF_FOLDING_BI_UNFOLD_DUAL_TIME

TBD

MSK_DINF_FOLDING_BI_UNFOLD_INITIALIZE_TIME

TBD

MSK_DINF_FOLDING_BI_UNFOLD_PRIMAL_TIME

TBD

MSK_DINF_FOLDING_BI_UNFOLD_TIME

TBD

MSK_DINF_FOLDING_FACTOR

Problem size after folding as a fraction of the original size.

MSK_DINF_FOLDING_TIME

Total time spent in folding for continuous problems (in seconds).

MSK_DINF_INTPNT_DUAL_FEAS

Dual feasibility measure reported by the interior-point optimizer. (For the interior-point optimizer this measure is not directly related to the original problem because a homogeneous model is employed.)

MSK_DINF_INTPNT_DUAL_OBJ

Dual objective value reported by the interior-point optimizer.

MSK_DINF_INTPNT_FACTOR_NUM_FLOPS

An estimate of the number of flops used in the factorization.

MSK_DINF_INTPNT_OPT_STATUS

A measure of optimality of the solution. It should converge to +1 if the problem has a primal-dual optimal solution, and converge to -1 if the problem is (strictly) primal or dual infeasible. If the measure converges to another constant, or fails to settle, the problem is usually ill-posed.

MSK_DINF_INTPNT_ORDER_TIME

Order time (in seconds).

MSK_DINF_INTPNT_PRIMAL_FEAS

Primal feasibility measure reported by the interior-point optimizer. (For the interior-point optimizer this measure is not directly related to the original problem because a homogeneous model is employed).

MSK_DINF_INTPNT_PRIMAL_OBJ

Primal objective value reported by the interior-point optimizer.

MSK_DINF_INTPNT_TIME

Time spent within the interior-point optimizer since its invocation (in seconds).

MSK_DINF_MIO_CLIQUE_SELECTION_TIME

Selection time for clique cuts (in seconds).

MSK_DINF_MIO_CLIQUE_SEPARATION_TIME

Separation time for clique cuts (in seconds).

MSK_DINF_MIO_CMIR_SELECTION_TIME

Selection time for CMIR cuts (in seconds).

MSK_DINF_MIO_CMIR_SEPARATION_TIME

Separation time for CMIR cuts (in seconds).

MSK_DINF_MIO_CONSTRUCT SOLUTION_OBJ

If **MOSEK** has successfully constructed an integer feasible solution, then this item contains the optimal objective value corresponding to the feasible solution.

MSK_DINF_MIO_DUAL_BOUND_AFTER_PRESOLVE

Value of the dual bound after presolve but before cut generation.

MSK_DINF_MIO_GMI_SELECTION_TIME

Selection time for GMI cuts (in seconds).

MSK_DINF_MIO_GMI_SEPARATION_TIME

Separation time for GMI cuts (in seconds).

MSK_DINF_MIO IMPLIED_BOUND_SELECTION_TIME

Selection time for implied bound cuts (in seconds).

MSK_DINF_MIO IMPLIED_BOUND_SEPARATION_TIME

Separation time for implied bound cuts (in seconds).

MSK_DINF_MIO_INITIAL_FEASIBLE SOLUTION_OBJ

If the user provided solution was found to be feasible this information item contains it's objective value.

MSK_DINF_MIO_KNAPSACK_COVER_SELECTION_TIME

Selection time for knapsack cover (in seconds).

MSK_DINF_MIO_KNAPSACK_COVER_SEPARATION_TIME

Separation time for knapsack cover (in seconds).

MSK_DINF_MIO_LIPRO_SELECTION_TIME

Selection time for lift-and-project cuts (in seconds).

MSK_DINF_MIO_LIPRO_SEPARATION_TIME

Separation time for lift-and-project cuts (in seconds).

MSK_DINF_MIO_OBJ_ABS_GAP

Given the mixed-integer optimizer has computed a feasible solution and a bound on the optimal objective value, then this item contains the absolute gap defined by

$$|(\text{objective value of feasible solution}) - (\text{objective bound})|.$$

Otherwise it has the value -1.0.

MSK_DINF_MIO_OBJ_BOUND

The best known bound on the objective function. This value is undefined until at least one relaxation has been solved: To see if this is the case check that **MSK_IINF_MIO_NUM_RELAX** is strictly positive.

MSK_DINF_MIO_OBJ_INT

The primal objective value corresponding to the best integer feasible solution. Please note that at least one integer feasible solution must have been located i.e. check **MSK_IINF_MIO_NUM_INT_SOLUTIONS**.

MSK_DINF_MIO_OBJ_REL_GAP

Given that the mixed-integer optimizer has computed a feasible solution and a bound on the optimal objective value, then this item contains the relative gap defined by

$$\frac{|(\text{objective value of feasible solution}) - (\text{objective bound})|}{\max(\delta, |(\text{objective value of feasible solution})|)}.$$

where δ is given by the parameter **MSK_DPAR_MIO_REL_GAP_CONST**. Otherwise it has the value -1.0.

MSK_DINF_MIO_PROBING_TIME

Total time for probing (in seconds).

MSK_DINF_MIO_ROOT_CUT_SELECTION_TIME

Total time for cut selection (in seconds).

MSK_DINF_MIO_ROOT_CUT_SEPARATION_TIME

Total time for cut separation (in seconds).

MSK_DINF_MIO_ROOT_OPTIMIZER_TIME

Time spent in the continuous optimizer while processing the root node relaxation (in seconds).

MSK_DINF_MIO_ROOT_PRESOLVE_TIME

Time spent presolving the problem at the root node (in seconds).

MSK_DINF_MIO_ROOT_TIME

Time spent processing the root node (in seconds).

MSK_DINF_MIO_SYMMETRY_DETECTION_TIME

Total time for symmetry detection (in seconds).

MSK_DINF_MIO_SYMMETRY_FACTOR

Degree to which the problem is affected by detected symmetry.

MSK_DINF_MIO_TIME

Time spent in the mixed-integer optimizer (in seconds).

MSK_DINF_MIO_USER_OBJ_CUT

If the objective cut is used, then this information item has the value of the cut.

MSK_DINF_OPTIMIZER_TICKS

Total number of ticks spent in the optimizer since it was invoked. It is strictly negative if it is not available.

MSK_DINF_OPTIMIZER_TIME

Total time spent in the optimizer since it was invoked (in seconds).

MSK_DINF_PRESOLVE_ELI_TIME

Total time spent in the eliminator since the presolve was invoked (in seconds).

MSK_DINF_PRESOLVE_LINDEP_TIME

Total time spent in the linear dependency checker since the presolve was invoked (in seconds).

MSK_DINF_PRESOLVE_TIME

Total time spent in the presolve since it was invoked (in seconds).

MSK_DINF_PRESOLVE_TOTAL_PRIMAL_PERTURBATION

Total perturbation of the bounds of the primal problem.

MSK_DINF_PRIMAL_REPAIR_PENALTY_OBJ

The optimal objective value of the penalty function.

MSK_DINF_QCQO_REFORMULATE_MAX_PERTURBATION

Maximum absolute diagonal perturbation occurring during the QCQO reformulation.

MSK_DINF_QCQO_REFORMULATE_TIME

Time spent with conic quadratic reformulation (in seconds).

MSK_DINF_QCQO_REFORMULATE_WORST_CHOLESKY_COLUMN_SCALING

Worst Cholesky column scaling.

MSK_DINF_QCQO_REFORMULATE_WORST_CHOLESKY_DIAG_SCALING

Worst Cholesky diagonal scaling.

MSK_DINF_READ_DATA_TIME

Time spent reading the data file (in seconds).

MSK_DINF_REMOTE_TIME

The total real time in seconds spent when optimizing on a server by the process performing the optimization on the server (in seconds).

MSK_DINF_SIM_DUAL_TIME

Time spent in the dual simplex optimizer since invoking it (in seconds).

MSK_DINF_SIM_FEAS

Feasibility measure reported by the simplex optimizer.

MSK_DINF_SIM_OBJ

Objective value reported by the simplex optimizer.

MSK_DINF_SIM_PRIMAL_TIME

Time spent in the primal simplex optimizer since invoking it (in seconds).

MSK_DINF_SIM_TIME

Time spent in the simplex optimizer since invoking it (in seconds).

MSK_DINF_SOL_BAS_DUAL_OBJ

Dual objective value of the basic solution. Updated if *MSK_IPAR_AUTO_UPDATE_SOL_INFO* is set .

MSK_DINF_SOL_BAS_DVIOLCON

Maximal dual bound violation for x^c in the basic solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_BAS_DVIOLVAR

Maximal dual bound violation for x^x in the basic solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_BAS_NRM_BARX

Infinity norm of \bar{X} in the basic solution.

MSK_DINF_SOL_BAS_NRM_SLC

Infinity norm of s_l^c in the basic solution.

MSK_DINF_SOL_BAS_NRM_SLX

Infinity norm of s_l^x in the basic solution.

MSK_DINF_SOL_BAS_NRM_SUC

Infinity norm of s_u^c in the basic solution.

MSK_DINF_SOL_BAS_NRM_SUX

Infinity norm of s_u^X in the basic solution.

MSK_DINF_SOL_BAS_NRM_XC

Infinity norm of x^c in the basic solution.

MSK_DINF_SOL_BAS_NRM_XX

Infinity norm of x^x in the basic solution.

MSK_DINF_SOL_BAS_NRM_Y

Infinity norm of y in the basic solution.

MSK_DINF_SOL_BAS_PRIMAL_OBJ

Primal objective value of the basic solution. Updated if *MSK_IPAR_AUTO_UPDATE_SOL_INFO* is set

MSK_DINF_SOL_BAS_PVIOLCON

Maximal primal bound violation for x^c in the basic solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_BAS_PVIOLVAR

Maximal primal bound violation for x^x in the basic solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_ITG_NRM_BARX

Infinity norm of \bar{X} in the integer solution.

MSK_DINF_SOL_ITG_NRM_XC

Infinity norm of x^c in the integer solution.

MSK_DINF_SOL_ITG_NRM_XX

Infinity norm of x^x in the integer solution.

MSK_DINF_SOL_ITG_PRIMAL_OBJ

Primal objective value of the integer solution. Updated if *MSK_IPAR_AUTO_UPDATE_SOL_INFO* is set .

MSK_DINF_SOL_ITG_PVIOLACC

Maximal primal violation for affine conic constraints in the integer solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_ITG_PVIOLBARVAR

Maximal primal bound violation for \bar{X} in the integer solution. Updated if
MSK_IPAR_AUTO_UPDATE_SOL_INFO is set .

MSK_DINF_SOL_ITG_PVIOLCON	Maximal primal bound violation for x^c in the integer solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITG_PVIOLCONES	Maximal primal violation for primal conic constraints in the integer solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITG_PVIOLDJC	Maximal primal violation for disjunctive constraints in the integer solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITG_PVIOLITG	Maximal violation for the integer constraints in the integer solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITG_PVIOLVAR	Maximal primal bound violation for x^x in the integer solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DUAL_OBJ	Dual objective value of the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DVIOLACC	Maximal dual violation for the affine conic constraints in the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DVIOLBARVAR	Maximal dual bound violation for \bar{X} in the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DVIOLCON	Maximal dual bound violation for x^c in the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DVIOLCONES	Maximal dual violation for conic constraints in the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_DVIOLVAR	Maximal dual bound violation for x^x in the interior-point solution.	Updated if <i>MSK_IPAR_AUTO_UPDATE_SOL_INFO</i> is set .
MSK_DINF_SOL_ITR_NRM_BARS	Infinity norm of \bar{S} in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_BARX	Infinity norm of \bar{X} in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_SLC	Infinity norm of s_l^c in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_SLX	Infinity norm of s_l^x in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_SNX	Infinity norm of s_n^x in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_SUC	Infinity norm of s_u^c in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_SUX	Infinity norm of s_u^X in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_XC	Infinity norm of x^c in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_XX	Infinity norm of x^x in the interior-point solution.	
MSK_DINF_SOL_ITR_NRM_Y	Infinity norm of y in the interior-point solution.	

MSK_DINF_SOL_ITR_PRIMAL_OBJ

Primal objective value of the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_SOL_ITR_PVIOLACC

Maximal primal violation for affine conic constraints in the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_SOL_ITR_PVIOLBARVAR

Maximal primal bound violation for \bar{X} in the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_SOL_ITR_PVIOLCON

Maximal primal bound violation for x^c in the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_SOL_ITR_PVIOLCONES

Maximal primal violation for conic constraints in the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_SOL_ITR_PVIOLVAR

Maximal primal bound violation for x^x in the interior-point solution. Updated if [*MSK_IPAR_AUTO_UPDATE_SOL_INFO*](#) is set .

MSK_DINF_TO_CONIC_TIME

Time spent in the last to conic reformulation (in seconds).

MSK_DINF_WRITE_DATA_TIME

Time spent writing the data file (in seconds).

10.4.21 License feature

MSK_FEATURE PTS

Base system.

MSK_FEATURE_PTON

Conic extension.

10.4.22 Long integer information items.

MSK_LIINF_ANA_PRO_SCALARIZED_CONSTRAINT_MATRIX_NUM_COLUMNS

Number of columns in the scalarized constraint matrix.

MSK_LIINF_ANA_PRO_SCALARIZED_CONSTRAINT_MATRIX_NUM_NZ

Number of non-zero entries in the scalarized constraint matrix.

MSK_LIINF_ANA_PRO_SCALARIZED_CONSTRAINT_MATRIX_NUM_ROWS

Number of rows in the scalarized constraint matrix.

MSK_LIINF_BI_CLEAN_ITER

Number of clean iterations performed in the basis identification.

MSK_LIINF_BI_DUAL_ITER

Number of dual pivots performed in the basis identification.

MSK_LIINF_BI_PRIMAL_ITER

Number of primal pivots performed in the basis identification.

MSK_LIINF_FOLDING_BI_DUAL_ITER

TBD

MSK_LIINF_FOLDING_BI_OPTIMIZER_ITER

TBD

MSK_LIINF_FOLDING_BI_PRIMAL_ITER

TBD

MSK_LIINF_INTPNT_FACTOR_NUM_NZ

Number of non-zeros in factorization.

MSK_LIINF_MIO_ANZ

Number of non-zero entries in the constraint matrix of the problem to be solved by the mixed-integer optimizer.

MSK_LIINF_MIO_FINAL_ANZ

Number of non-zero entries in the constraint matrix of the mixed-integer optimizer's final problem.

MSK_LIINF_MIO_INTPNT_ITER

Number of interior-point iterations performed by the mixed-integer optimizer.

MSK_LIINF_MIO_NUM_DUAL_ILLPOSED_CER

Number of dual illposed certificates encountered by the mixed-integer optimizer.

MSK_LIINF_MIO_NUM_PRIM_ILLPOSED_CER

Number of primal illposed certificates encountered by the mixed-integer optimizer.

MSK_LIINF_MIO_PRESOLVED_ANZ

Number of non-zero entries in the constraint matrix of the problem after the mixed-integer optimizer's presolve.

MSK_LIINF_MIO_SIMPLEX_ITER

Number of simplex iterations performed by the mixed-integer optimizer.

MSK_LIINF_RD_NUMACC

Number of affine conic constraints.

MSK_LIINF_RD_NUMANZ

Number of non-zeros in A that is read.

MSK_LIINF_RD_NUMDJC

Number of disjunctive constraints.

MSK_LIINF_RD_NUMQNZ

Number of Q non-zeros.

MSK_LIINF_SIMPLEX_ITER

Number of iterations performed by the simplex optimizer.

10.4.23 Integer information items.

MSK_IINF_ANA_PRO_NUM_CON

Number of constraints in the problem.

MSK_IINF_ANA_PRO_NUM_CON_EQ

Number of equality constraints.

MSK_IINF_ANA_PRO_NUM_CON_FR

Number of unbounded constraints.

MSK_IINF_ANA_PRO_NUM_CON_LO

Number of constraints with a lower bound and an infinite upper bound.

MSK_IINF_ANA_PRO_NUM_CON_RA

Number of constraints with finite lower and upper bounds.

MSK_IINF_ANA_PRO_NUM_CON_UP

Number of constraints with an upper bound and an infinite lower bound.

MSK_IINF_ANA_PRO_NUM_VAR

Number of variables in the problem.

MSK_IINF_ANA_PRO_NUM_VAR_BIN

Number of binary (0-1) variables.

MSK_IINF_ANA_PRO_NUM_VAR_CONT

Number of continuous variables.

MSK_IINF_ANA_PRO_NUM_VAR_EQ

Number of fixed variables.

MSK_IINF_ANA_PRO_NUM_VAR_FR

Number of free variables.

MSK_IINF_ANA_PRO_NUM_VAR_INT

Number of general integer variables.

MSK_IINF_ANA_PRO_NUM_VAR_LO

Number of variables with a lower bound and an infinite upper bound.

MSK_IINF_ANA_PRO_NUM_VAR_RA

Number of variables with finite lower and upper bounds.

MSK_IINF_ANA_PRO_NUM_VAR_UP

Number of variables with an upper bound and an infinite lower bound.

MSK_IINF_FOLDING_APPLIED

Non-zero if folding was exploited.

MSK_IINF_INTPNT_FACTOR_DIM_DENSE

Dimension of the dense sub system in factorization.

MSK_IINF_INTPNT_ITER

Number of interior-point iterations since invoking the interior-point optimizer.

MSK_IINF_INTPNT_NUM_THREADS

Number of threads that the interior-point optimizer is using.

MSK_IINF_INTPNT_SOLVE_DUAL

Non-zero if the interior-point optimizer is solving the dual problem.

MSK_IINF_MIO_ABSGAP_SATISFIED

Non-zero if absolute gap is within tolerances.

MSK_IINF_MIO_CLIQUE_TABLE_SIZE

Size of the clique table.

MSK_IINF_MIO_CONSTRUCT SOLUTION

This item informs if **MOSEK** constructed an initial integer feasible solution.

- -1: tried, but failed,
- 0: no partial solution supplied by the user,
- 1: constructed feasible solution.

MSK_IINF_MIO_FINAL_NUMBIN

Number of binary variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMBINCONEVAR

Number of binary cone variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMCON

Number of constraints in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMCONE

Number of cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMCONEVAR

Number of cone variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMCONT

Number of continuous variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMCONTCONEVAR

Number of continuous cone variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMDEXPCONES

Number of dual exponential cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMDJC

Number of disjunctive constraints in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMDPOWCONES

Number of dual power cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMINT

Number of integer variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMINTCONEVAR

Number of integer cone variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMPEXPINES

Number of primal exponential cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMPPOWCONES

Number of primal power cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMQCONES

Number of quadratic cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMRQCONES

Number of rotated quadratic cones in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_FINAL_NUMVAR

Number of variables in the mixed-integer optimizer's final problem.

MSK_IINF_MIO_INITIAL_FEASIBLE_SOLUTION

This item informs if **MOSEK** found the solution provided by the user to be feasible

- 0: solution provided by the user was not found to be feasible for the current problem,
- 1: user provided solution was found to be feasible.

MSK_IINF_MIO_NODE_DEPTH

Depth of the last node solved.

MSK_IINF_MIO_NUM_ACTIVE_NODES

Number of active branch and bound nodes.

MSK_IINF_MIO_NUM_ACTIVE_ROOT_CUTS

Number of active cuts in the final relaxation after the mixed-integer optimizer's root cut generation.

MSK_IINF_MIO_NUM_BLOCKS_SOLVED_IN_BB

Number of independent decomposition blocks solved though a dedicated algorithm.

MSK_IINF_MIO_NUM_BLOCKS_SOLVED_IN_PRESOLVE

Number of independent decomposition blocks solved during presolve.

MSK_IINF_MIO_NUM_BRANCH

Number of branches performed during the optimization.

MSK_IINF_MIO_NUM_INT_SOLUTIONS

Number of integer feasible solutions that have been found.

MSK_IINF_MIO_NUM_RELAX

Number of relaxations solved during the optimization.

MSK_IINF_MIO_NUM_REPEATED_PRESOLVE

Number of times presolve was repeated at root.

MSK_IINF_MIO_NUM_RESTARTS

Number of restarts performed during the optimization.

MSK_IINF_MIO_NUM_ROOT_CUT_ROUNDS

Number of cut separation rounds at the root node of the mixed-integer optimizer.

MSK_IINF_MIO_NUM_SELECTED_CLIQUE_CUTS

Number of clique cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SELECTED_CMIR_CUTS

Number of Complemented Mixed Integer Rounding (CMIR) cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SELECTED_GOMORY_CUTS

Number of Gomory cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SELECTED_IMPLIED_BOUND_CUTS

Number of implied bound cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SELECTED_KNAPSACK_COVER_CUTS

Number of clique cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SELECTED_LIPRO_CUTS

Number of lift-and-project cuts selected to be included in the relaxation.

MSK_IINF_MIO_NUM_SEPARATED_CLIQUE_CUTS

Number of separated clique cuts.

MSK_IINF_MIO_NUM_SEPARATED_CMIR_CUTS

Number of separated Complemented Mixed Integer Rounding (CMIR) cuts.

MSK_IINF_MIO_NUM_SEPARATED_GOMORY_CUTS
Number of separated Gomory cuts.

MSK_IINF_MIO_NUM_SEPARATED_IMPLIED_BOUND_CUTS
Number of separated implied bound cuts.

MSK_IINF_MIO_NUM_SEPARATED_KNAPSACK_COVER_CUTS
Number of separated clique cuts.

MSK_IINF_MIO_NUM_SEPARATED_LIPRO_CUTS
Number of separated lift-and-project cuts.

MSK_IINF_MIO_NUM_SOLVED_NODES
Number of branch and bounds nodes solved in the main branch and bound tree.

MSK_IINF_MIO_NUMBIN
Number of binary variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMBINCONEVAR
Number of binary cone variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMCON
Number of constraints in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMCONE
Number of cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMCONEVAR
Number of cone variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMCONT
Number of continuous variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMCONTCONEVAR
Number of continuous cone variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMDEXPCONES
Number of dual exponential cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMDJC
Number of disjunctive constraints in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMDPOWCONES
Number of dual power cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMINT
Number of integer variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMINTCONEVAR
Number of integer cone variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMPEXPCONES
Number of primal exponential cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMPPOWCONES
Number of primal power cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMQCONES
Number of quadratic cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMRQCONES
Number of rotated quadratic cones in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_NUMVAR
Number of variables in the problem to be solved by the mixed-integer optimizer.

MSK_IINF_MIO_OBJ_BOUND_DEFINED
Non-zero if a valid objective bound has been found, otherwise zero.

MSK_IINF_MIO_PRESOLVED_NUMBIN
Number of binary variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMBINCONEVAR
Number of binary cone variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMCON
Number of constraints in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMCONE

Number of cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMCONEVAR

Number of cone variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMCONT

Number of continuous variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMCONTCONEVAR

Number of continuous cone variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMDEXPCONES

Number of dual exponential cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMDJC

Number of disjunctive constraints in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMDPOWCONES

Number of dual power cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMINT

Number of integer variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMINTCONEVAR

Number of integer cone variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMPEXPCONES

Number of primal exponential cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMPPOWCONES

Number of primal power cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMQCONES

Number of quadratic cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMRQCONES

Number of rotated quadratic cones in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_PRESOLVED_NUMVAR

Number of variables in the problem after the mixed-integer optimizer's presolve.

MSK_IINF_MIO_RELGAP_SATISFIED

Non-zero if relative gap is within tolerances.

MSK_IINF_MIO_TOTAL_NUM_SELECTED_CUTS

Total number of cuts selected to be included in the relaxation by the mixed-integer optimizer.

MSK_IINF_MIO_TOTAL_NUM_SEPARATED_CUTS

Total number of cuts separated by the mixed-integer optimizer.

MSK_IINF_MIO_USER_OBJ_CUT

If it is non-zero, then the objective cut is used.

MSK_IINF_OPT_NUMCON

Number of constraints in the problem solved when the optimizer is called.

MSK_IINF_OPT_NUMVAR

Number of variables in the problem solved when the optimizer is called

MSK_IINF_OPTIMIZE_RESPONSE

The response code returned by optimize.

MSK_IINF_PRESOLVE_NUM_PRIMAL_PERTURBATIONS

Number perturbations to thhe bounds of the primal problem.

MSK_IINF_PURIFY_DUAL_SUCCESS

Is nonzero if the dual solution is purified.

MSK_IINF_PURIFY_PRIMAL_SUCCESS

Is nonzero if the primal solution is purified.

MSK_IINF_RD_NUMBARVAR

Number of symmetric variables read.

MSK_IINF_RD_NUMCON

Number of constraints read.

MSK_IINF_RD_NUMCONE

Number of conic constraints read.

MSK_IINF_RD_NUMINTVAR

Number of integer-constrained variables read.

MSK_IINF_RD_NUMQ

Number of nonempty Q matrices read.

MSK_IINF_RD_NUMVAR

Number of variables read.

MSK_IINF_RD_PROTOTYPE

Problem type.

MSK_IINF_SIM_DUAL_DEG_ITER

The number of dual degenerate iterations.

MSK_IINF_SIM_DUAL_HOTSTART

If 1 then the dual simplex algorithm is solving from an advanced basis.

MSK_IINF_SIM_DUAL_HOTSTART_LU

If 1 then a valid basis factorization of full rank was located and used by the dual simplex algorithm.

MSK_IINF_SIM_DUAL_INF_ITER

The number of iterations taken with dual infeasibility.

MSK_IINF_SIM_DUAL_ITER

Number of dual simplex iterations during the last optimization.

MSK_IINF_SIM_NUMCON

Number of constraints in the problem solved by the simplex optimizer.

MSK_IINF_SIM_NUMVAR

Number of variables in the problem solved by the simplex optimizer.

MSK_IINF_SIM_PRIMAL_DEG_ITER

The number of primal degenerate iterations.

MSK_IINF_SIM_PRIMAL_HOTSTART

If 1 then the primal simplex algorithm is solving from an advanced basis.

MSK_IINF_SIM_PRIMAL_HOTSTART_LU

If 1 then a valid basis factorization of full rank was located and used by the primal simplex algorithm.

MSK_IINF_SIM_PRIMAL_INF_ITER

The number of iterations taken with primal infeasibility.

MSK_IINF_SIM_PRIMAL_ITER

Number of primal simplex iterations during the last optimization.

MSK_IINF_SIM_SOLVE_DUAL

Is non-zero if dual problem is solved.

MSK_IINF_SOL_BAS_PROSTA

Problem status of the basic solution. Updated after each optimization.

MSK_IINF_SOL_BAS_SOLSTA

Solution status of the basic solution. Updated after each optimization.

MSK_IINF_SOL_ITG_PROSTA

Problem status of the integer solution. Updated after each optimization.

MSK_IINF_SOL_ITG_SOLSTA

Solution status of the integer solution. Updated after each optimization.

MSK_IINF_SOL_ITR_PROSTA

Problem status of the interior-point solution. Updated after each optimization.

MSK_IINF_SOL_ITR_SOLSTA

Solution status of the interior-point solution. Updated after each optimization.

MSK_IINF_STO_NUM_A_REALLOC

Number of times the storage for storing A has been changed. A large value may indicate that memory fragmentation may occur.

10.4.24 Information item types

MSK_INF_DOU_TYPE

Is a double information type.

MSK_INF_INT_TYPE

Is an integer.

MSK_INF_LINT_TYPE

Is a long integer.

10.4.25 Input/output modes

MSK_IOMODE_READ

The file is read-only.

MSK_IOMODE_WRITE

The file is write-only. If the file exists then it is truncated when it is opened. Otherwise it is created when it is opened.

MSK_IOMODE_READWRITE

The file is to read and write.

10.4.26 Specifies the branching direction.

MSK_BRANCH_DIR_FREE

The mixed-integer optimizer decides which branch to choose.

MSK_BRANCH_DIR_UP

The mixed-integer optimizer always chooses the up branch first.

MSK_BRANCH_DIR_DOWN

The mixed-integer optimizer always chooses the down branch first.

MSK_BRANCH_DIR_NEAR

Branch in direction nearest to selected fractional variable.

MSK_BRANCH_DIR_FAR

Branch in direction farthest from selected fractional variable.

MSK_BRANCH_DIR_ROOT_LP

Choose direction based on root lp value of selected variable.

MSK_BRANCH_DIR_GUIDED

Branch in direction of current incumbent.

MSK_BRANCH_DIR_PSEUDOCOST

Branch based on the pseudocost of the variable.

10.4.27 Specifies the reformulation method for mixed-integer quadratic problems.

MSK_MIO_QCQO_REFORMULATION_METHOD_FREE

The mixed-integer optimizer decides which reformulation method to apply.

MSK_MIO_QCQO_REFORMULATION_METHOD_NONE

No reformulation method is applied.

MSK_MIO_QCQO_REFORMULATION_METHOD_LINEARIZATION

A reformulation via linearization is applied.

MSK_MIO_QCQO_REFORMULATION_METHOD_EIGEN_VAL_METHOD

The eigenvalue method is applied.

MSK_MIO_QCQO_REFORMULATION_METHOD_DIAG_SDP

A perturbation of matrix diagonals via the solution of SDPs is applied.

MSK_MIO_QCQO_REFORMULATION_METHOD_RELAX_SDP

A Reformulation based on the solution of an SDP-relaxation of the problem is applied.

10.4.28 Specifies the problem data permutation method for mixed-integer problems.

MSK_MIO_DATA_PERMUTATION_METHOD_NONE

No problem data permutation is applied.

MSK_MIO_DATA_PERMUTATION_METHOD_CYCLIC_SHIFT

A random cyclic shift is applied to permute the problem data.

MSK_MIO_DATA_PERMUTATION_METHOD_RANDOM

A random permutation is applied to the problem data.

10.4.29 Continuous mixed-integer solution type

MSK_MIO_CONT_SOL_NONE

No interior-point or basic solution are reported when the mixed-integer optimizer is used.

MSK_MIO_CONT_SOL_ROOT

The reported interior-point and basic solutions are a solution to the root node problem when mixed-integer optimizer is used.

MSK_MIO_CONT_SOL_ITG

The reported interior-point and basic solutions are a solution to the problem with all integer variables fixed at the value they have in the integer solution. A solution is only reported in case the problem has a primal feasible solution.

MSK_MIO_CONT_SOL_ITG_REL

In case the problem is primal feasible then the reported interior-point and basic solutions are a solution to the problem with all integer variables fixed at the value they have in the integer solution.

If the problem is primal infeasible, then the solution to the root node problem is reported.

10.4.30 Integer restrictions

MSK_MIO_MODE_IGNORED

The integer constraints are ignored and the problem is solved as a continuous problem.

MSK_MIO_MODE_SATISFIED

Integer restrictions should be satisfied.

10.4.31 Mixed-integer node selection types

MSK_MIO_NODE_SELECTION_FREE

The optimizer decides the node selection strategy.

MSK_MIO_NODE_SELECTION_FIRST

The optimizer employs a depth first node selection strategy.

MSK_MIO_NODE_SELECTION_BEST

The optimizer employs a best bound node selection strategy.

MSK_MIO_NODE_SELECTION_PSEUDO

The optimizer employs selects the node based on a pseudo cost estimate.

10.4.32 Mixed-integer variable selection types

MSK_MIO_VAR_SELECTION_FREE

The optimizer decides the variable selection strategy.

MSK_MIO_VAR_SELECTION_PSEUDOCOST

The optimizer employs pseudocost variable selection.

MSK_MIO_VAR_SELECTION_STRONG

The optimizer employs strong branching variable selection

10.4.33 MPS file format type

MSK_MPS_FORMAT_STRICT

It is assumed that the input file satisfies the MPS format strictly.

MSK_MPS_FORMAT_RELAXED

It is assumed that the input file satisfies a slightly relaxed version of the MPS format.

MSK_MPS_FORMAT_FREE

It is assumed that the input file satisfies the free MPS format. This implies that spaces are not allowed in names. Otherwise the format is free.

MSK_MPS_FORMAT_CPLEX

The CPLEX compatible version of the MPS format is employed.

10.4.34 Objective sense types

MSK_OBJECTIVE_SENSE_MINIMIZE

The problem should be minimized.

MSK_OBJECTIVE_SENSE_MAXIMIZE

The problem should be maximized.

10.4.35 On/off

MSK_ON

Switch the option on.

MSK_OFF

Switch the option off.

10.4.36 Optimizer types

MSK_OPTIMIZER_CONIC

The optimizer for problems having conic constraints.

MSK_OPTIMIZER_DUAL_SIMPLEX

The dual simplex optimizer is used.

MSK_OPTIMIZER_FREE

The optimizer is chosen automatically.

MSK_OPTIMIZER_FREE_SIMPLEX

One of the simplex optimizers is used.

MSK_OPTIMIZER_INTPNT

The interior-point optimizer is used.

MSK_OPTIMIZER_MIXED_INT

The mixed-integer optimizer.

MSK_OPTIMIZER_NEW_DUAL_SIMPLEX

The new dual simplex optimizer is used.

MSK_OPTIMIZER_NEW_PRIMAL_SIMPLEX

The new primal simplex optimizer is used. It is not recommended to use this option.

MSK_OPTIMIZER_PRIMAL_SIMPLEX

The primal simplex optimizer is used.

10.4.37 Ordering strategies

`MSK_ORDER_METHOD_FREE`

The ordering method is chosen automatically.

`MSK_ORDER_METHOD_APPMINLOC`

Approximate minimum local fill-in ordering is employed.

`MSK_ORDER_METHOD_EXPERIMENTAL`

This option should not be used.

`MSK_ORDER_METHOD_TRY_GRAPHPAR`

Always try the graph partitioning based ordering.

`MSK_ORDER_METHOD_FORCE_GRAPHPAR`

Always use the graph partitioning based ordering even if it is worse than the approximate minimum local fill ordering.

`MSK_ORDER_METHOD_NONE`

No ordering is used. Note using this value almost always leads to a significantly slow down.

10.4.38 Presolve method.

`MSK_PRESOLVE_MODE_OFF`

The problem is not presolved before it is optimized.

`MSK_PRESOLVE_MODE_ON`

The problem is presolved before it is optimized.

`MSK_PRESOLVE_MODE_FREE`

It is decided automatically whether to presolve before the problem is optimized.

10.4.39 Method of folding (symmetry detection for continuous problems).

`MSK_FOLDING_MODE_OFF`

Disabled.

`MSK_FOLDING_MODE_FREE`

The solver decides on the usage and amount of folding.

`MSK_FOLDING_MODE_FREE_UNLESS_BASIC`

If only the interior-point solution is requested then the solver decides; if the basic solution is requested then folding is disabled.

`MSK_FOLDING_MODE_FORCE`

Full folding is always performed regardless of workload.

10.4.40 Parameter type

`MSK_PAR_INVALID_TYPE`

Not a valid parameter.

`MSK_PAR_DOU_TYPE`

Is a double parameter.

`MSK_PAR_INT_TYPE`

Is an integer parameter.

`MSK_PAR_STR_TYPE`

Is a string parameter.

10.4.41 Problem data items

MSK_PI_VAR

Item is a variable.

MSK_PI_CON

Item is a constraint.

MSK_PI_CONE

Item is a cone.

10.4.42 Problem types

MSK_PROBTYPE_LO

The problem is a linear optimization problem.

MSK_PROBTYPE_QO

The problem is a quadratic optimization problem.

MSK_PROBTYPE_QCQO

The problem is a quadratically constrained optimization problem.

MSK_PROBTYPE_CONIC

A conic optimization.

MSK_PROBTYPE_MIXED

General nonlinear constraints and conic constraints. This combination can not be solved by **MOSEK**.

10.4.43 Problem status keys

MSK_PRO_STA_UNKNOWN

Unknown problem status.

MSK_PRO_STA_PRIM_AND_DUAL_FEAS

The problem is primal and dual feasible.

MSK_PRO_STA_PRIM_FEAS

The problem is primal feasible.

MSK_PRO_STA_DUAL_FEAS

The problem is dual feasible.

MSK_PRO_STA_PRIM_INFEAS

The problem is primal infeasible.

MSK_PRO_STA_DUAL_INFEAS

The problem is dual infeasible.

MSK_PRO_STA_PRIM_AND_DUAL_INFEAS

The problem is primal and dual infeasible.

MSK_PRO_STA_ILLPOSED

The problem is ill-posed. For example, it may be primal and dual feasible but have a positive duality gap.

MSK_PRO_STA_PRIM_INFEAS_OR_UNBOUNDED

The problem is either primal infeasible or unbounded. This may occur for mixed-integer problems.

10.4.44 Response code type

`MSK_RESPONSE_OK`

The response code is OK.

`MSK_RESPONSE_WRN`

The response code is a warning.

`MSK_RESPONSE_TRM`

The response code is an optimizer termination status.

`MSK_RESPONSE_ERR`

The response code is an error.

`MSK_RESPONSE_UNK`

The response code does not belong to any class.

10.4.45 Scaling type

`MSK_SCALING_FREE`

The optimizer chooses the scaling heuristic.

`MSK_SCALING_NONE`

No scaling is performed.

10.4.46 Scaling method

`MSK_SCALING_METHOD_POW2`

Scales only with power of 2 leaving the mantissa untouched.

`MSK_SCALING_METHOD_FREE`

The optimizer chooses the scaling heuristic.

10.4.47 Sensitivity types

`MSK_SENSITIVITY_TYPE_BASIS`

Basis sensitivity analysis is performed.

10.4.48 Simplex selection strategy

`MSK_SIM_SELECTION_FREE`

The optimizer chooses the pricing strategy.

`MSK_SIM_SELECTION_FULL`

The optimizer uses full pricing.

`MSK_SIM_SELECTION_ASE`

The optimizer uses approximate steepest-edge pricing.

`MSK_SIM_SELECTION_DEVEX`

The optimizer uses devex steepest-edge pricing (or if it is not available an approximate steep-edge selection).

`MSK_SIM_SELECTION_SE`

The optimizer uses steepest-edge selection (or if it is not available an approximate steep-edge selection).

`MSK_SIM_SELECTION_PARTIAL`

The optimizer uses a partial selection approach. The approach is usually beneficial if the number of variables is much larger than the number of constraints.

10.4.49 Solution items

MSK_SOL_ITEM_XC

Solution for the constraints.

MSK_SOL_ITEM_XX

Variable solution.

MSK_SOL_ITEM_Y

Lagrange multipliers for equations.

MSK_SOL_ITEM_SLC

Lagrange multipliers for lower bounds on the constraints.

MSK_SOL_ITEM_SUC

Lagrange multipliers for upper bounds on the constraints.

MSK_SOL_ITEM_SLX

Lagrange multipliers for lower bounds on the variables.

MSK_SOL_ITEM_SUX

Lagrange multipliers for upper bounds on the variables.

MSK_SOL_ITEM_SNX

Lagrange multipliers corresponding to the conic constraints on the variables.

10.4.50 Solution status keys

MSK_SOL_STA_UNKNOWN

Status of the solution is unknown.

MSK_SOL_STA_OPTIMAL

The solution is optimal.

MSK_SOL_STA_PRIM_FEAS

The solution is primal feasible.

MSK_SOL_STA_DUAL_FEAS

The solution is dual feasible.

MSK_SOL_STA_PRIM_AND_DUAL_FEAS

The solution is both primal and dual feasible.

MSK_SOL_STA_PRIM_INFEAS_CER

The solution is a certificate of primal infeasibility.

MSK_SOL_STA_DUAL_INFEAS_CER

The solution is a certificate of dual infeasibility.

MSK_SOL_STA_PRIM_ILLPOSED_CER

The solution is a certificate that the primal problem is illposed.

MSK_SOL_STA_DUAL_ILLPOSED_CER

The solution is a certificate that the dual problem is illposed.

MSK_SOL_STA_INTEGER_OPTIMAL

The primal solution is integer optimal.

10.4.51 Solution types

MSK_SOL_BAS

The basic solution.

MSK_SOL_ITR

The interior solution.

MSK_SOL_ITG

The integer solution.

10.4.52 Solve primal or dual form

`MSK_SOLVE_FREE`

The optimizer is free to solve either the primal or the dual problem.

`MSK_SOLVE_PRIMAL`

The optimizer should solve the primal problem.

`MSK_SOLVE_DUAL`

The optimizer should solve the dual problem.

10.4.53 Status keys

`MSK_SK_UNK`

The status for the constraint or variable is unknown.

`MSK_SK_BAS`

The constraint or variable is in the basis.

`MSK_SK_SUPBAS`

The constraint or variable is super basic.

`MSK_SK_LOW`

The constraint or variable is at its lower bound.

`MSK_SK_UPR`

The constraint or variable is at its upper bound.

`MSK_SK_FIX`

The constraint or variable is fixed.

`MSK_SK_INF`

The constraint or variable is infeasible in the bounds.

10.4.54 Starting point types

`MSK_STARTING_POINT_FREE`

The starting point is chosen automatically.

`MSK_STARTING_POINT_GUESS`

The optimizer guesses a starting point.

`MSK_STARTING_POINT_CONSTANT`

The optimizer constructs a starting point by assigning a constant value to all primal and dual variables. This starting point is normally robust.

10.4.55 Stream types

`MSK_STREAM_LOG`

Log stream. Contains the aggregated contents of all other streams. This means that a message written to any other stream will also be written to this stream.

`MSK_STREAM_MSG`

Message stream. Log information relating to performance and progress of the optimization is written to this stream.

`MSK_STREAM_ERR`

Error stream. Error messages are written to this stream.

`MSK_STREAM_WRN`

Warning stream. Warning messages are written to this stream.

10.4.56 Integer values

`MSK_MAX_STR_LEN`

Maximum string length allowed in **MOSEK**.

`MSK_LICENSE_BUFFER_LENGTH`

The length of a license key buffer.

10.4.57 Variable types

`MSK_VAR_TYPE_CONT`

Is a continuous variable.

`MSK_VAR_TYPE_INT`

Is an integer variable.

10.5 Supported domains

This section lists the domains supported by **MOSEK**.

10.5.1 Linear domains

Each linear domain is determined by the dimension n .

- : the **zero domain**, consisting of the origin $0^n \in \mathbb{R}^n$.
- : the **nonnegative orthant domain** $\mathbb{R}_{\geq 0}^n$.
- : the **nonpositive orthant domain** $\mathbb{R}_{\leq 0}^n$.
- : the **free domain**, consisting of the whole \mathbb{R}^n .

Membership in a linear domain is equivalent to imposing the corresponding set of n linear constraints, for instance $Fx + g \in 0^n$ is equivalent to $Fx + g = 0$ and so on. The free domain imposes no restriction.

10.5.2 Quadratic cone domains

The quadratic domains are determined by the dimension n .

- : the **quadratic cone domain** is the subset of \mathbb{R}^n defined as

$$\mathcal{Q}^n = \left\{ x \in \mathbb{R}^n : x_1 \geq \sqrt{x_2^2 + \dots + x_n^2} \right\}.$$

- : the **rotated quadratic cone domain** is the subset of \mathbb{R}^n defined as

$$\mathcal{Q}_r^n = \left\{ x \in \mathbb{R}^n : 2x_1x_2 \geq x_3^2 + \dots + x_n^2, x_1, x_2 \geq 0 \right\}.$$

10.5.3 Exponential cone domains

- : the **primal exponential cone domain** is the subset of \mathbb{R}^3 defined as

$$K_{\text{exp}} = \left\{ (x_1, x_2, x_3) \in \mathbb{R}^3 : x_1 \geq x_2 \exp(x_3/x_2), x_1, x_2 \geq 0 \right\}.$$

- : the **dual exponential cone domain** is the subset of \mathbb{R}^3 defined as

$$K_{\text{exp}}^* = \left\{ (x_1, x_2, x_3) \in \mathbb{R}^3 : x_1 \geq -x_3 \exp(x_2/x_3 - 1), x_1 \geq 0, x_3 \leq 0 \right\}.$$

10.5.4 Power cone domains

A power cone domain is determined by the dimension n and a sequence of $1 \leq n_l < n$ positive real numbers (weights) $\alpha_1, \dots, \alpha_{n_l}$.

- : the **primal power cone domain** is the subset of \mathbb{R}^n defined as

$$\mathcal{P}_n^{(\alpha_1, \dots, \alpha_{n_l})} = \left\{ x \in \mathbb{R}^n : \prod_{i=1}^{n_l} x_i^{\beta_i} \geq \sqrt{x_{n_l+1}^2 + \dots + x_n^2}, x_1, \dots, x_{n_l} \geq 0 \right\}.$$

where β_i are the weights normalized to add up to 1, ie. $\beta_i = \alpha_i / (\sum_j \alpha_j)$ for $i = 1, \dots, n_l$. The name n_l reads as “n left”, the length of the product on the left-hand side of the definition.

- : the **dual power cone domain** is the subset of \mathbb{R}^n defined as

$$(\mathcal{P}_n^{(\alpha_1, \dots, \alpha_{n_l})})^* = \left\{ x \in \mathbb{R}^n : \prod_{i=1}^{n_l} \left(\frac{x_i}{\beta_i} \right)^{\beta_i} \geq \sqrt{x_{n_l+1}^2 + \dots + x_n^2}, x_1, \dots, x_{n_l} \geq 0 \right\}.$$

where β_i are the weights normalized to add up to 1, ie. $\beta_i = \alpha_i / (\sum_j \alpha_j)$ for $i = 1, \dots, n_l$. The name n_l reads as “n left”, the length of the product on the left-hand side of the definition.

- **Remark:** in MOSEK 9 power cones were available only in the special case with $n_l = 2$ and weights $(\alpha, 1 - \alpha)$ for some $0 < \alpha < 1$ specified as cone parameter.

10.5.5 Geometric mean cone domains

A geometric mean cone domain is determined by the dimension n .

- : the **primal geometric mean cone domain** is the subset of \mathbb{R}^n defined as

$$\mathcal{GM}^n = \left\{ x \in \mathbb{R}^n : \left(\prod_{i=1}^{n-1} x_i \right)^{1/(n-1)} \geq |x_n|, x_1, \dots, x_{n-1} \geq 0 \right\}.$$

It is a special case of the primal power cone domain with $n_l = n-1$ and weights $\alpha = (1, \dots, 1)$.

- : the **dual geometric mean cone domain** is the subset of \mathbb{R}^n defined as

$$(\mathcal{GM}^n)^* = \left\{ x \in \mathbb{R}^n : (n-1) \left(\prod_{i=1}^{n-1} x_i \right)^{1/(n-1)} \geq |x_n|, x_1, \dots, x_{n-1} \geq 0 \right\}.$$

It is a special case of the dual power cone domain with $n_l = n-1$ and weights $\alpha = (1, \dots, 1)$.

10.5.6 Vectorized semidefinite domain

- : the **vectorized PSD cone domain** is determined by the dimension n , which must be of the form $n = d(d+1)/2$. Then the domain is defined as

$$\mathcal{S}_+^{d,\text{vec}} = \{(x_1, \dots, x_{d(d+1)/2}) \in \mathbb{R}^n : \text{sMat}(x) \in \mathcal{S}_+^d\},$$

where

$$\text{sMat}(x) = \begin{bmatrix} x_1 & x_2/\sqrt{2} & \cdots & x_d/\sqrt{2} \\ x_2/\sqrt{2} & x_{d+1} & \cdots & x_{2d-1}/\sqrt{2} \\ \cdots & \cdots & \cdots & \cdots \\ x_d/\sqrt{2} & x_{2d-1}/\sqrt{2} & \cdots & x_{d(d+1)/2} \end{bmatrix},$$

or equivalently

$$\mathcal{S}_+^{d,\text{vec}} = \{\text{sVec}(X) : X \in \mathcal{S}_+^d\},$$

where

$$\text{sVec}(X) = (X_{11}, \sqrt{2}X_{21}, \dots, \sqrt{2}X_{d1}, X_{22}, \sqrt{2}X_{32}, \dots, X_{dd}).$$

In other words, the domain consists of vectorizations of the lower-triangular part of a positive semidefinite matrix, with the non-diagonal elements additionally rescaled.

Chapter 11

Supported File Formats

MOSEK supports a range of problem and solution formats listed in [Table 11.1](#) and [Table 11.2](#).

The most important are:

- the **Task format**, **MOSEK**'s native binary format which supports all features that **MOSEK** supports. It is the closest possible representation of the internal data in a task and it is ideal for submitting problem data support questions.
- the **PTF format**, **MOSEK**'s human-readable format that supports all linear, conic and mixed-integer features. It is ideal for debugging. It is not an exact copy of all the data in the task, but it contains all information required to reconstruct it, presented in a readable fashion.
- **MPS**, **LP**, **CBF** formats are industry standards, each supporting some limited set of features, and potentially requiring some degree of reformulation during read/write.

Problem formats

Table 11.1: List of supported file formats for optimization problems.

Format Type	Ext.	Binary/Text	LP	QCQO	ACC	SDP	DJC	Sol	Param
<i>LP</i>	lp	plain text	X	X					
<i>MPS</i>	mps	plain text	X	X					
<i>PTF</i>	ptf	plain text	X		X	X	X	X	X
<i>CBF</i>	cbf	plain text	X		X	X			
<i>Task format</i>	task	binary	X	X	X	X	X	X	X
<i>Jtask format</i>	jtask	text/JSON	X	X	X	X	X	X	X
<i>OPF</i> (deprecated for conic problems)	opf	plain text	X	X				X	X

The columns of the table indicate if the specified file format supports:

- LP - linear problems, possibly with integer variables,
- QCQO - quadratic objective or constraints,
- ACC - affine conic constraints,
- SDP - semidefinite cone/variables,
- DJC - disjunctive constraints,
- Sol - solutions,
- Param - optimizer parameters.

Solution formats

Table 11.2: List of supported solution formats.

Format Type	Ext.	Binary/Text	Description
<i>SOL</i>	sol	plain text	Interior Solution
	bas	plain text	Basic Solution
	int	plain text	Integer
<i>Jsol format</i>	jsol	text/JSON	All solutions

Compression

MOSEK supports GZIP and Zstandard compression. Problem files with extension `.gz` (for GZIP) and `.zst` (for Zstandard) are assumed to be compressed when read, and are automatically compressed when written. For example, a file called

`problem.mps.zst`

will be considered as a Zstandard compressed MPS file.

11.1 The LP File Format

MOSEK supports the LP file format with some extensions. The LP format is not a completely well-defined standard and hence different optimization packages may interpret the same LP file in slightly different ways. **MOSEK** tries to emulate as closely as possible CPLEX's behavior, but tries to stay backward compatible.

The LP file format can specify problems of the form

$$\begin{array}{llll} \text{minimize/maximize} & c^T x + \frac{1}{2} q^o(x) \\ \text{subject to} & l^c \leq Ax + \frac{1}{2} q(x) \leq u^c, \\ & l^x \leq x \leq u^x, \\ & x_J \text{ integer}, \end{array}$$

where

- $x \in \mathbb{R}^n$ is the vector of decision variables.
- $c \in \mathbb{R}^n$ is the linear term in the objective.
- $q^o : \mathbb{R}^n \rightarrow \mathbb{R}$ is the quadratic term in the objective where

$$q^o(x) = x^T Q^o x$$

and it is assumed that

$$Q^o = (Q^o)^T.$$

- $A \in \mathbb{R}^{m \times n}$ is the constraint matrix.
- $l^c \in \mathbb{R}^m$ is the lower limit on the activity for the constraints.
- $u^c \in \mathbb{R}^m$ is the upper limit on the activity for the constraints.
- $l^x \in \mathbb{R}^n$ is the lower limit on the activity for the variables.
- $u^x \in \mathbb{R}^n$ is the upper limit on the activity for the variables.
- $q : \mathbb{R}^n \rightarrow \mathbb{R}$ is a vector of quadratic functions. Hence,

$$q_i(x) = x^T Q^i x$$

where it is assumed that

$$Q^i = (Q^i)^T.$$

- $\mathcal{J} \subseteq \{1, 2, \dots, n\}$ is an index set of the integer constrained variables.

11.1.1 File Sections

An LP formatted file contains a number of sections specifying the objective, constraints, variable bounds, and variable types. The section keywords may be any mix of upper and lower case letters.

Objective Function

The first section beginning with one of the keywords

```
max
maximum
maximize
min
minimum
minimize
```

defines the objective sense and the objective function, i.e.

$$c^T x + \frac{1}{2} x^T Q^o x.$$

The objective may be given a name by writing

```
mynname:
```

before the expressions.

The objective function contains linear and quadratic terms. The linear terms are written as

```
4 x1 + x2 - 0.1 x3
```

and so forth. The quadratic terms are written in square brackets ($[]/2$) and are either squared or multiplied as in the examples

```
x1^2
```

and

```
x1 * x2
```

There may be zero or more pairs of brackets containing quadratic expressions.

An example of an objective section is

```
minimize
myobj: 4 x1 + x2 - 0.1 x3 + [ x1^2 + 2.1 x1 * x2 ]/2
```

Please note that the quadratic expressions are multiplied with $\frac{1}{2}$, so that the above expression means

$$\text{minimize } 4x_1 + x_2 - 0.1 \cdot x_3 + \frac{1}{2}(x_1^2 + 2.1 \cdot x_1 \cdot x_2)$$

If the same variable occurs more than once in the linear part, the coefficients are added, so that $4 x1 + 2 x1$ is equivalent to $6 x1$. In the quadratic expressions $x1 * x2$ is equivalent to $x2 * x1$ and, as in the linear part, if the same variables multiplied or squared occur several times their coefficients are added.

Constraints

The second section beginning with one of the keywords

```
subj to  
subject to  
s.t.  
st
```

defines the linear constraint matrix A and the quadratic matrices Q^i .

A constraint contains a name (optional), expressions adhering to the same rules as in the objective and a bound:

```
subject to  
con1: x1 + x2 + [ x3^2 ]/2 <= 5.1
```

The bound type (here \leq) may be any of $<$, \leq , $=$, $>$, \geq ($<$ and \leq mean the same), and the bound may be any number.

Ranged constraints cannot be written in LP format, and have to be split into a separate upper and lower bound.

Bounds

Bounds on the variables can be specified in the bound section beginning with one of the keywords

```
bound  
bounds
```

The bounds section is optional but should, if present, follow the `subject to` section. All variables listed in the bounds section must occur in either the objective or a constraint.

The default lower and upper bounds are 0 and $+\infty$. A variable may be declared free with the keyword `free`, which means that the lower bound is $-\infty$ and the upper bound is $+\infty$. Furthermore it may be assigned a finite lower and upper bound. The bound definitions for a given variable may be written in one or two lines, and bounds can be any number or $\pm\infty$ (written as `+inf/-inf/+infinity/-infinity`) as in the example

```
bounds  
x1 free  
x2 <= 5  
0.1 <= x2  
x3 = 42  
2 <= x4 < +inf
```

Variable Types

The final two sections are optional and must begin with one of the keywords

```
bin  
binaries  
binary
```

and

```
gen  
general
```

Under `general` all integer variables are listed, and under `binary` all binary (integer variables with bounds 0 and 1) are listed:

```
general  
x1 x2
```

(continues on next page)

(continued from previous page)

```
binary  
x3 x4
```

Again, all variables listed in the binary or general sections must occur in either the objective or a constraint.

Terminating Section

Finally, an LP formatted file must be terminated with the keyword

```
end
```

11.1.2 LP File Examples

Linear example lo1.lp

```
\ File: lo1.lp  
maximize  
obj: 3 x1 + x2 + 5 x3 + x4  
subject to  
c1: 3 x1 + x2 + 2 x3 = 30  
c2: 2 x1 + x2 + 3 x3 + x4 >= 15  
c3: 2 x2 + 3 x4 <= 25  
bounds  
0 <= x1 <= +infinity  
0 <= x2 <= 10  
0 <= x3 <= +infinity  
0 <= x4 <= +infinity  
end
```

Mixed integer example milo1.lp

```
maximize  
obj: x1 + 6.4e-01 x2  
subject to  
c1: 5e+01 x1 + 3.1e+01 x2 <= 2.5e+02  
c2: 3e+00 x1 - 2e+00 x2 >= -4e+00  
bounds  
0 <= x1 <= +infinity  
0 <= x2 <= +infinity  
general  
x1 x2  
end
```

11.1.3 LP Format peculiarities

Comments

Anything on a line after a \ is ignored and is treated as a comment.

Names

A name for an objective, a constraint or a variable may contain the letters **a-z**, **A-Z**, the digits **0-9** and the characters

```
!"#$%&()/.;?@_`|^~
```

The first character in a name must not be a number, a period or the letter **e** or **E**. Keywords must not be used as names.

MOSEK accepts any character as valid for names, except \0. A name that is not allowed in LP file will be changed and a warning will be issued.

The algorithm for making names LP valid works as follows: The name is interpreted as an **utf-8** string. For a Unicode character **c**:

- If **c==_** (underscore), the output is **__** (two underscores).
- If **c** is a valid LP name character, the output is just **c**.
- If **c** is another character in the ASCII range, the output is **_XX**, where **XX** is the hexadecimal code for the character.
- If **c** is a character in the range **127-65535**, the output is **_uXXXXX**, where **XXXXX** is the hexadecimal code for the character.
- If **c** is a character above **65535**, the output is **_UXXXXXXXXX**, where **XXXXXXXXX** is the hexadecimal code for the character.

Invalid **utf-8** substrings are escaped as **_XX'**, and if a name starts with a period, **e** or **E**, that character is escaped as **_XX**.

Variable Bounds

Specifying several upper or lower bounds on one variable is possible but **MOSEK** uses only the tightest bounds. If a variable is fixed (with **=**), then it is considered the tightest bound.

11.2 The MPS File Format

MOSEK supports the standard MPS format with some extensions. For a detailed description of the MPS format see the book by Nazareth [Naz87].

11.2.1 MPS File Structure

The version of the MPS format supported by **MOSEK** allows specification of an optimization problem of the form

$$\begin{array}{lll} \text{maximize/minimize} & c^T x + q_0(x) \\ l^c & \leq & Ax + q(x) \\ l^x & \leq & x \\ & & \leq u^c, \\ & & x \in \mathcal{K}, \\ & & x_{\mathcal{J}} \text{ integer}, \end{array} \quad (11.1)$$

where

- $x \in \mathbb{R}^n$ is the vector of decision variables.
- $A \in \mathbb{R}^{m \times n}$ is the constraint matrix.
- $l^c \in \mathbb{R}^m$ is the lower limit on the activity for the constraints.
- $u^c \in \mathbb{R}^m$ is the upper limit on the activity for the constraints.
- $l^x \in \mathbb{R}^n$ is the lower limit on the activity for the variables.
- $u^x \in \mathbb{R}^n$ is the upper limit on the activity for the variables.

- $q : \mathbb{R}^n \rightarrow \mathbb{R}$ is a vector of quadratic functions. Hence,

$$q_i(x) = \frac{1}{2}x^T Q^i x$$

where it is assumed that $Q^i = (Q^i)^T$. Please note the explicit $\frac{1}{2}$ in the quadratic term and that Q^i is required to be symmetric. The same applies to q_0 .

- \mathcal{K} is a convex cone.
- $\mathcal{J} \subseteq \{1, 2, \dots, n\}$ is an index set of the integer-constrained variables.
- c is the vector of objective coefficients.

An MPS file with one row and one column can be illustrated like this:

```

*      1      2      3      4      5      6
*2345678901234567890123456789012345678901234567890
NAME      [name]
OBJSENSE
[ objsense]
OBJNAME      [objname]
ROWS
?  [cname1]
COLUMNS
[vname1]  [cname1]  [value1]      [cname2]  [value2]
RHS
[name]  [cname1]  [value1]      [cname2]  [value2]
RANGES
[name]  [cname1]  [value1]      [cname2]  [value2]
QSECTION
[cname1]
[vname1]  [vname2]  [value1]      [vname3]  [value2]
QMATRIX
[vname1]  [vname2]  [value1]
QUADOBJ
[vname1]  [vname2]  [value1]
QCMATRIX
[cname1]
[vname1]  [vname2]  [value1]
BOUNDS
?? [name]  [vname1]  [value1]
CSECTION
[kname1]  [value1]      [ktype]
[vname1]
ENDATA

```

Here the names in capitals are keywords of the MPS format and names in brackets are custom defined names or values. A couple of notes on the structure:

- Fields: All items surrounded by brackets appear in *fields*. The fields named “valueN” are numerical values. Hence, they must have the format

```
[+|-]XXXXXXXX.XXXXXX[[e|E][+|-]XXX]
```

where

```
X = [0|1|2|3|4|5|6|7|8|9].
```

- Sections: The MPS file consists of several sections where the names in capitals indicate the beginning of a new section. For example, COLUMNS denotes the beginning of the columns section.
- Comments: Lines starting with an * are comment lines and are ignored by **MOSEK**.
- Keys: The question marks represent keys to be specified later.

- Extensions: The sections **QSECTION** and **CSECTION** are specific **MOSEK** extensions of the MPS format. The sections **QMATRIX**, **QUADOBJ** and **QCMATRIX** are included for sake of compatibility with other vendors extensions to the MPS format.
- The standard MPS format is a fixed format, i.e. everything in the MPS file must be within certain fixed positions. **MOSEK** also supports a *free format*. See Sec. 11.2.5 for details.

Linear example lo1.mps

A concrete example of a MPS file is presented below:

```
* File: lo1.mps
NAME          lo1
OBJSENSE
    MAX
ROWS
N  obj
E  c1
G  c2
L  c3
COLUMNS
x1      obj      3
x1      c1       3
x1      c2       2
x2      obj       1
x2      c1       1
x2      c2       1
x2      c3       2
x3      obj       5
x3      c1       2
x3      c2       3
x4      obj       1
x4      c2       1
x4      c3       3
RHS
rhs      c1      30
rhs      c2      15
rhs      c3      25
RANGES
BOUNDS
UP bound   x2      10
ENDATA
```

Subsequently each individual section in the MPS format is discussed.

NAME (**optional**)

In this section a name ([name]) is assigned to the problem.

OBJSENSE (**optional**)

This is an optional section that can be used to specify the sense of the objective function. The **OBJSENSE** section contains one line at most which can be one of the following:

```
MIN  
MINIMIZE  
MAX  
MAXIMIZE
```

It should be obvious what the implication is of each of these four lines.

OBJNAME (**optional**)

This is an optional section that can be used to specify the name of the row that is used as objective function. **objname** should be a valid row name.

ROWS

A record in the **ROWS** section has the form

```
? [cname1]
```

where the requirements for the fields are as follows:

Field	Starting Position	Max Width	required	Description
?	2	1	Yes	Constraint key
[cname1]	5	8	Yes	Constraint name

Hence, in this section each constraint is assigned a unique name denoted by [cname1]. Please note that [cname1] starts in position 5 and the field can be at most 8 characters wide. An initial key ? must be present to specify the type of the constraint. The key can have values E, G, L, or N with the following interpretation:

Constraint type	l_i^c	u_i^c
E (equal)	finite	$= l_i^c$
G (greater)	finite	∞
L (lower)	$-\infty$	finite
N (none)	$-\infty$	∞

In the MPS format the objective vector is not specified explicitly, but one of the constraints having the key N will be used as the objective vector c . In general, if multiple N type constraints are specified, then the first will be used as the objective vector c , unless something else was specified in the section **OBJNAME**.

COLUMNS

In this section the elements of A are specified using one or more records having the form:

```
[vname1] [cname1] [value1] [cname2] [value2]
```

where the requirements for each field are as follows:

Field	Starting Position	Max Width	required	Description
[vname1]	5	8	Yes	Variable name
[cname1]	15	8	Yes	Constraint name
[value1]	25	12	Yes	Numerical value
[cname2]	40	8	No	Constraint name
[value2]	50	12	No	Numerical value

Hence, a record specifies one or two elements a_{ij} of A using the principle that [vname1] and [cname1] determines j and i respectively. Please note that [cname1] must be a constraint name specified in the ROWS section. Finally, [value1] denotes the numerical value of a_{ij} . Another optional element is specified by [cname2], and [value2] for the variable specified by [vname1]. Some important comments are:

- All elements belonging to one variable must be grouped together.
- Zero elements of A should not be specified.
- At least one element for each variable should be specified.

RHS (optional)

A record in this section has the format

[name]	[cname1]	[value1]	[cname2]	[value2]
--------	----------	----------	----------	----------

where the requirements for each field are as follows:

Field	Starting Position	Max Width	required	Description
[name]	5	8	Yes	Name of the RHS vector
[cname1]	15	8	Yes	Constraint name
[value1]	25	12	Yes	Numerical value
[cname2]	40	8	No	Constraint name
[value2]	50	12	No	Numerical value

The interpretation of a record is that [name] is the name of the RHS vector to be specified. In general, several vectors can be specified. [cname1] denotes a constraint name previously specified in the ROWS section. Now, assume that this name has been assigned to the i -th constraint and v_1 denotes the value specified by [value1], then the interpretation of v_1 is:

Constraint	l_i^c	u_i^c
E	v_1	v_1
G	v_1	
L		v_1
N		

An optional second element is specified by [cname2] and [value2] and is interpreted in the same way. Please note that it is not necessary to specify zero elements, because elements are assumed to be zero.

RANGES (optional)

A record in this section has the form

[name]	[cname1]	[value1]	[cname2]	[value2]
--------	----------	----------	----------	----------

where the requirements for each fields are as follows:

Field	Starting Position	Max Width	required	Description
[name]	5	8	Yes	Name of the RANGE vector
[cname1]	15	8	Yes	Constraint name
[value1]	25	12	Yes	Numerical value
[cname2]	40	8	No	Constraint name
[value2]	50	12	No	Numerical value

The records in this section are used to modify the bound vectors for the constraints, i.e. the values in l^c and u^c . A record has the following interpretation: [name] is the name of the RANGE vector and [cname1] is a valid constraint name. Assume that [cname1] is assigned to the i -th constraint and let v_1 be the value specified by [value1], then a record has the interpretation:

Constraint type	Sign of v_1	l_i^c	u_i^c
E	—	$u_i^c + v_1$	
E	+		$l_i^c + v_1$
G	— or +		$l_i^c + v_1 $
L	— or +	$u_i^c - v_1 $	
N			

Another constraint bound can optionally be modified using [cname2] and [value2] the same way.

QSECTION (optional)

Within the QSECTION the label [cname1] must be a constraint name previously specified in the ROWS section. The label [cname1] denotes the constraint to which the quadratic terms belong. A record in the QSECTION has the form

[vname1]	[vname2]	[value1]	[vname3]	[value2]
----------	----------	----------	----------	----------

where the requirements for each field are:

Field	Starting Position	Max Width	required	Description
[vname1]	5	8	Yes	Variable name
[vname2]	15	8	Yes	Variable name
[value1]	25	12	Yes	Numerical value
[vname3]	40	8	No	Variable name
[value2]	50	12	No	Numerical value

A record specifies one or two elements in the lower triangular part of the Q^i matrix where [cname1] specifies the i . Hence, if the names [vname1] and [vname2] have been assigned to the k -th and j -th variable, then Q_{kj}^i is assigned the value given by [value1]. An optional second element is specified in the same way by the fields [vname1], [vname3], and [value2].

The example

$$\begin{aligned} \text{minimize} \quad & -x_2 + \frac{1}{2}(2x_1^2 - 2x_1x_3 + 0.2x_2^2 + 2x_3^2) \\ \text{subject to} \quad & x_1 + x_2 + x_3 \geq 1, \\ & x \geq 0 \end{aligned}$$

has the following MPS file representation

```

* File: qo1.mps
NAME          qo1
ROWS
N  obj
G  c1
COLUMNS
x1      c1      1.0
x2      obj     -1.0
x2      c1      1.0
x3      c1      1.0
RHS
rhs      c1      1.0
QSECTION
obj
x1      x1      2.0
x1      x3     -1.0
x2      x2      0.2
x3      x3      2.0
ENDATA

```

Regarding the QSECTIONs please note that:

- Only one QSECTION is allowed for each constraint.
- The QSECTIONs can appear in an arbitrary order after the COLUMNS section.
- All variable names occurring in the QSECTION must already be specified in the COLUMNS section.
- All entries specified in a QSECTION are assumed to belong to the lower triangular part of the quadratic term of Q .

QMATRIX/QUADOBJ (optional)

The QMATRIX and QUADOBJ sections allow to define the quadratic term of the objective function. They differ in how the quadratic term of the objective function is stored:

- QMATRIX stores all the nonzeros coefficients, without taking advantage of the symmetry of the Q matrix.
- QUADOBJ stores the upper diagonal nonzero elements of the Q matrix.

A record in both sections has the form:

```
[vname1] [vname2] [value1]
```

where the requirements for each field are:

Field	Starting Position	Max Width	required	Description
[vname1]	5	8	Yes	Variable name
[vname2]	15	8	Yes	Variable name
[value1]	25	12	Yes	Numerical value

A record specifies one elements of the Q matrix in the objective function . Hence, if the names [vname1] and [vname2] have been assigned to the k -th and j -th variable, then Q_{kj} is assigned the value given by [value1]. Note that a line must appear for each off-diagonal coefficient if using a QMATRIX section, while only one entry is required in a QUADOBJ section. The quadratic part of the objective function will be evaluated as $1/2x^TQx$.

The example

$$\begin{aligned} \text{minimize} \quad & -x_2 + \frac{1}{2}(2x_1^2 - 2x_1x_3 + 0.2x_2^2 + 2x_3^2) \\ \text{subject to} \quad & x_1 + x_2 + x_3 \geq 1, \\ & x \geq 0 \end{aligned}$$

has the following MPS file representation using QMATRIX

```

* File: qo1_matrix.mps
NAME          qo1_qmatrix
ROWS
N  obj
G  c1
COLUMNS
  x1      c1      1.0
  x2      obj     -1.0
  x2      c1      1.0
  x3      c1      1.0
RHS
  rhs      c1      1.0
QMATRIX
  x1      x1      2.0
  x1      x3     -1.0
  x3      x1     -1.0
  x2      x2      0.2
  x3      x3      2.0
ENDATA

```

or the following using QUADOBJ

```

* File: qo1_quadobj.mps
NAME          qo1_quadobj
ROWS
N  obj
G  c1
COLUMNS
  x1      c1      1.0
  x2      obj     -1.0
  x2      c1      1.0
  x3      c1      1.0
RHS
  rhs      c1      1.0
QUADOBJ
  x1      x1      2.0
  x1      x3     -1.0
  x2      x2      0.2
  x3      x3      2.0
ENDATA

```

Please also note that:

- A QMATRIX/QUADOBJ section can appear in an arbitrary order after the COLUMNS section.
- All variable names occurring in the QMATRIX/QUADOBJ section must already be specified in the COLUMNS section.

QCMATRIX (optional)

A QCMATRIX section allows to specify the quadratic part of a given constraint. Within the QCMATRIX the label [cname1] must be a constraint name previously specified in the ROWS section. The label [cname1] denotes the constraint to which the quadratic term belongs. A record in the QSECTION has the form

[vname1]	[vname2]	[value1]
----------	----------	----------

where the requirements for each field are:

Field	Starting Position	Max Width	required	Description
[vname1]	5	8	Yes	Variable name
[vname2]	15	8	Yes	Variable name
[value1]	25	12	Yes	Numerical value

A record specifies an entry of the Q^i matrix where [cname1] specifies the i . Hence, if the names [vname1] and [vname2] have been assigned to the k -th and j -th variable, then Q_{kj}^i is assigned the value given by [value1]. Moreover, the quadratic term is represented as $1/2x^T Q x$.

The example

$$\begin{aligned} & \text{minimize} && x_2 \\ & \text{subject to} && x_1 + x_2 + x_3 \geq 1, \\ & && \frac{1}{2}(-2x_1x_3 + 0.2x_2^2 + 2x_3^2) \leq 10, \\ & && x \geq 0 \end{aligned}$$

has the following MPS file representation

```
* File: qo1.mps
NAME          qo1
ROWS
N  obj
G  c1
L  q1
COLUMNS
  x1      c1      1.0
  x2      obj     -1.0
  x2      c1      1.0
  x3      c1      1.0
RHS
  rhs      c1      1.0
  rhs      q1     10.0
QCMATRIX
  q1
    x1      x1      2.0
    x1      x3     -1.0
    x3      x1     -1.0
    x2      x2      0.2
    x3      x3      2.0
ENDATA
```

Regarding the QCMATRIXs please note that:

- Only one QCMATRIX is allowed for each constraint.
- The QCMATRIXs can appear in an arbitrary order after the COLUMNS section.
- All variable names occurring in the QSECTION must already be specified in the COLUMNS section.
- QCMATRIX does not exploit the symmetry of Q : an off-diagonal entry (i, j) should appear twice.

BOUNDS (optional)

In the BOUNDS section changes to the default bounds vectors l^x and u^x are specified. The default bounds vectors are $l^x = 0$ and $u^x = \infty$. Moreover, it is possible to specify several sets of bound vectors. A record in this section has the form

```
?? [name]  [vname1]  [value1]
```

where the requirements for each field are:

Field	Starting Position	Max Width	Required	Description
??	2	2	Yes	Bound key
[name]	5	8	Yes	Name of the BOUNDS vector
[vname1]	15	8	Yes	Variable name
[value1]	25	12	No	Numerical value

Hence, a record in the BOUNDS section has the following interpretation: [name] is the name of the bound vector and [vname1] is the name of the variable for which the bounds are modified by the record. ?? and [value1] are used to modify the bound vectors according to the following table:

??	l_j^x	u_j^x	Made integer (added to \mathcal{J})
FR	$-\infty$	∞	No
FX	v_1	v_1	No
LO	v_1	unchanged	No
MI	$-\infty$	unchanged	No
PL	unchanged	∞	No
UP	unchanged	v_1	No
BV	0	1	Yes
LI	$[v_1]$	unchanged	Yes
UI	unchanged	$[v_1]$	Yes

Here v_1 is the value specified by [value1].

CSECTION (optional)

The purpose of the CSECTION is to specify the conic constraint

$$x \in \mathcal{K}$$

in (11.1). It is assumed that \mathcal{K} satisfies the following requirements. Let

$$x^t \in \mathbb{R}^{n^t}, \quad t = 1, \dots, k$$

be vectors comprised of parts of the decision variables x so that each decision variable is a member of exactly **one** vector x^t , for example

$$x^1 = \begin{bmatrix} x_1 \\ x_4 \\ x_7 \end{bmatrix} \quad \text{and} \quad x^2 = \begin{bmatrix} x_6 \\ x_5 \\ x_3 \\ x_2 \end{bmatrix}.$$

Next define

$$\mathcal{K} := \{x \in \mathbb{R}^n : x^t \in \mathcal{K}_t, \quad t = 1, \dots, k\}$$

where \mathcal{K}_t must have one of the following forms:

- \mathbb{R} set:

$$\mathcal{K}_t = \mathbb{R}^{n^t}.$$

- Zero cone:

$$\mathcal{K}_t = \{0\} \subseteq \mathbb{R}^{n^t}. \quad (11.2)$$

- Quadratic cone:

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^{n^t} : x_1 \geq \sqrt{\sum_{j=2}^{n^t} x_j^2} \right\}. \quad (11.3)$$

- Rotated quadratic cone:

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^{n^t} : 2x_1x_2 \geq \sum_{j=3}^{n^t} x_j^2, \quad x_1, x_2 \geq 0 \right\}. \quad (11.4)$$

- Primal exponential cone:

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^3 : x_1 \geq x_2 \exp(x_3/x_2), \quad x_1, x_2 \geq 0 \right\}. \quad (11.5)$$

- Primal power cone (with parameter $0 < \alpha < 1$):

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^{n^t} : x_1^\alpha x_2^{1-\alpha} \geq \sqrt{\sum_{j=3}^{n^t} x_j^2}, \quad x_1, x_2 \geq 0 \right\}. \quad (11.6)$$

- Dual exponential cone:

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^3 : x_1 \geq -x_3 e^{-1} \exp(x_2/x_3), \quad x_3 \leq 0, x_1 \geq 0 \right\}. \quad (11.7)$$

- Dual power cone (with parameter $0 < \alpha < 1$):

$$\mathcal{K}_t = \left\{ x \in \mathbb{R}^{n^t} : \left(\frac{x_1}{\alpha}\right)^\alpha \left(\frac{x_2}{1-\alpha}\right)^{1-\alpha} \geq \sqrt{\sum_{j=3}^{n^t} x_j^2}, \quad x_1, x_2 \geq 0 \right\}. \quad (11.8)$$

In general, membership in the \mathbb{R} set is not specified. If a variable is not a member of any other cone then it is assumed to be a member of the \mathbb{R} cone.

Next, let us study an example. Assume that the power cone

$$x_4^{1/3} x_5^{2/3} \geq |x_8|$$

and the rotated quadratic cone

$$2x_3x_7 \geq x_1^2 + x_0^2, \quad x_3, x_7 \geq 0,$$

should be specified in the MPS file. One CSECTION is required for each cone and they are specified as follows:

```
*      1      2      3      4      5      6
*23456789012345678901234567890123456789012345678901234567890
CSECTION      konea      3e-1          PPOW
x4
x5
x8
CSECTION      koneb      0.0          RQUAD
x7
x3
x1
x0
```

In general, a CSECTION header has the format

CSECTION	[kname1]	[value1]	[ktype]
----------	----------	----------	---------

where the requirements for each field are as follows:

Field	Starting Position	Max Width	Required	Description
[kname1]	15	8	Yes	Name of the cone
[value1]	25	12	No	Cone parameter
[ktype]	40		Yes	Type of the cone.

The possible cone type keys are:

[ktype]	Members	[value1]	Interpretation.
ZERO	≥ 0	unused	Zero cone (11.2).
QUAD	≥ 1	unused	Quadratic cone (11.3).
RQUAD	≥ 2	unused	Rotated quadratic cone (11.4).
PEXP	3	unused	Primal exponential cone (11.5).
PPOW	≥ 2	α	Primal power cone (11.6).
DEXP	3	unused	Dual exponential cone (11.7).
DPOW	≥ 2	α	Dual power cone (11.8).

A record in the CSECTION has the format

[vname1]

where the requirements for each field are

Field	Starting Position	Max Width	required	Description
[vname1]	5	8	Yes	A valid variable name

A variable must occur in at most one CSECTION.

ENDATA

This keyword denotes the end of the MPS file.

11.2.2 Integer Variables

Using special bound keys in the BOUNDS section it is possible to specify that some or all of the variables should be integer-constrained i.e. be members of \mathcal{J} . However, an alternative method is available. This method is available only for backward compatibility and we recommend that it is not used. This method requires that markers are placed in the COLUMNS section as in the example:

```
COLUMNS
x1      obj      -10.0      c1      0.7
x1      c2       0.5       c3      1.0
x1      c4       0.1
* Start of integer-constrained variables.
MARK000  'MARKER'          'INTORG'
x2      obj      -9.0       c1      1.0
x2      c2      0.8333333333  c3      0.66666667
x2      c4      0.25
x3      obj      1.0        c6      2.0
MARK001  'MARKER'          'INTEND'
* End of integer-constrained variables.
```

Please note that special marker lines are used to indicate the start and the end of the integer variables. Furthermore be aware of the following

- All variables between the markers are assigned a default lower bound of 0 and a default upper bound of 1. **This may not be what is intended.** If it is not intended, the correct bounds should be defined in the BOUNDS section of the MPS formatted file.
- **MOSEK** ignores field 1, i.e. MARK0001 and MARK001, however, other optimization systems require them.
- Field 2, i.e. MARKER, must be specified including the single quotes. This implies that no row can be assigned the name MARKER.
- Field 3 is ignored and should be left blank.

- Field 4, i.e. INTORG and INTEND, must be specified.
- It is possible to specify several such integer marker sections within the COLUMNS section.

11.2.3 General Limitations

- An MPS file should be an ASCII file.

11.2.4 Interpretation of the MPS Format

Several issues related to the MPS format are not well-defined by the industry standard. However, **MOSEK** uses the following interpretation:

- If a matrix element in the COLUMNS section is specified multiple times, then the multiple entries are added together.
- If a matrix element in a QSECTION section is specified multiple times, then the multiple entries are added together.

11.2.5 The Free MPS Format

MOSEK supports a free format variation of the MPS format. The free format is similar to the MPS file format but less restrictive, e.g. it allows longer names. However, a name must not contain any blanks.

Moreover, by default a line in the MPS file must not contain more than 1024 characters. By modifying the parameter `MSK_IPAR_READ_MPS_WIDTH` an arbitrary large line width will be accepted.

The free MPS format is default. To change to the strict and other formats use the parameter `MSK_IPAR_READ_MPS_FORMAT`.

Warning: This file format is to a large extent deprecated. While it can still be used for linear and quadratic problems, for conic problems the Sec. 11.5 is recommended.

11.3 The OPF Format

The *Optimization Problem Format (OPF)* is an alternative to LP and MPS files for specifying optimization problems. It is row-oriented, inspired by the CPLEX LP format.

Apart from containing objective, constraints, bounds etc. it may contain complete or partial solutions, comments and extra information relevant for solving the problem. It is designed to be easily read and modified by hand and to be forward compatible with possible future extensions.

Intended use

The OPF file format is meant to replace several other files:

- The LP file format: Any problem that can be written as an LP file can be written as an OPF file too; furthermore it naturally accommodates ranged constraints and variables as well as arbitrary characters in names, fixed expressions in the objective, empty constraints, and conic constraints.
- Parameter files: It is possible to specify integer, double and string parameters along with the problem (or in a separate OPF file).
- Solution files: It is possible to store a full or a partial solution in an OPF file and later reload it.

11.3.1 The File Format

The format uses tags to structure data. A simple example with the basic sections may look like this:

```
[comment]
This is a comment. You may write almost anything here...
[/comment]

# This is a single-line comment.

[objective min 'myobj']
x + 3 y + x^2 + 3 y^2 + z + 1
[/objective]

[constraints]
[con 'con01'] 4 <= x + y  [/con]
[/constraints]

[bounds]
[b] -10 <= x,y <= 10  [/b]

[cone quad] x,y,z [/cone]
[/bounds]
```

A scope is opened by a tag of the form [tag] and closed by a tag of the form [/tag]. An opening tag may accept a list of unnamed and named arguments, for examples:

```
[tag value] tag with one unnamed argument [/tag]
[tag arg=value] tag with one named argument [/tag]
```

Unnamed arguments are identified by their order, while named arguments may appear in any order, but never before an unnamed argument. The value can be a quoted, single-quoted or double-quoted text string, i.e.

```
[tag 'value']      single-quoted value [/tag]
[tag arg='value']  single-quoted value [/tag]
[tag "value"]      double-quoted value [/tag]
[tag arg="value"]  double-quoted value [/tag]
```

11.3.2 Sections

The recognized tags are

[comment]

A comment section. This can contain *almost* any text: Between single quotes (') or double quotes ("") any text may appear. Outside quotes the markup characters ([and]) must be prefixed by backslashes. Both single and double quotes may appear alone or inside a pair of quotes if it is prefixed by a backslash.

[objective]

The objective function: This accepts one or two parameters, where the first one (in the above example `min`) is either `min` or `max` (regardless of case) and defines the objective sense, and the second one (above `myobj`), if present, is the objective name. The section may contain linear and quadratic expressions.

If several objectives are specified, all but the last are ignored.

[constraints]

This does not directly contain any data, but may contain subsections `con` defining a linear constraint.

[con]

Defines a single constraint; if an argument is present (`[con NAME]`) this is used as the name of the constraint, otherwise it is given a null-name. The section contains a constraint definition written as linear and quadratic expressions with a lower bound, an upper bound, with both or with an equality. Examples:

```
[constraints]
[con 'con1'] 0 <= x + y      [/con]
[con 'con2'] 0 >= x + y      [/con]
[con 'con3'] 0 <= x + y <= 10 [/con]
[con 'con4']      x + y = 10 [/con]
[/constraints]
```

Constraint names are unique. If a constraint is specified which has the same name as a previously defined constraint, the new constraint replaces the existing one.

[bounds]

This does not directly contain any data, but may contain subsections `b` (linear bounds on variables) and `cone` (cones).

[b]

Bound definition on one or several variables separated by comma (,). An upper or lower bound on a variable replaces any earlier defined bound on that variable. If only one bound (upper or lower) is given only this bound is replaced. This means that upper and lower bounds can be specified separately. So the OPF bound definition:

```
[b]  x,y >= -10  [/b]
[b]  x,y <= 10   [/b]
```

results in the bound $-10 \leq x, y \leq 10$.

[cone]

Specifies a cone. A cone is defined as a sequence of variables which belong to a single unique cone. The supported cone types are:

- **quad**: a quadratic cone of n variables x_1, \dots, x_n defines a constraint of the form

$$x_1^2 \geq \sum_{i=2}^n x_i^2, \quad x_1 \geq 0.$$

- **rquad**: a rotated quadratic cone of n variables x_1, \dots, x_n defines a constraint of the form

$$2x_1x_2 \geq \sum_{i=3}^n x_i^2, \quad x_1, x_2 \geq 0.$$

- **pexp**: primal exponential cone of 3 variables x_1, x_2, x_3 defines a constraint of the form

$$x_1 \geq x_2 \exp(x_3/x_2), \quad x_1, x_2 \geq 0.$$

- **ppow** with parameter $0 < \alpha < 1$: primal power cone of n variables x_1, \dots, x_n defines a constraint of the form

$$x_1^\alpha x_2^{1-\alpha} \geq \sqrt{\sum_{j=3}^n x_j^2}, \quad x_1, x_2 \geq 0.$$

- **dexp**: dual exponential cone of 3 variables x_1, x_2, x_3 defines a constraint of the form

$$x_1 \geq -x_3 e^{-1} \exp(x_2/x_3), \quad x_3 \leq 0, x_1 \geq 0.$$

- **dpow** with parameter $0 < \alpha < 1$: dual power cone of n variables x_1, \dots, x_n defines a constraint of the form

$$\left(\frac{x_1}{\alpha}\right)^\alpha \left(\frac{x_2}{1-\alpha}\right)^{1-\alpha} \geq \sqrt{\sum_{j=3}^n x_j^2}, \quad x_1, x_2 \geq 0.$$

- **zero**: zero cone of n variables x_1, \dots, x_n defines a constraint of the form

$$x_1 = \dots = x_n = 0$$

A [bounds]-section example:

```
[bounds]
[b] 0 <= x,y <= 10 [/b] # ranged bound
[b] 10 >= x,y >= 0 [/b] # ranged bound
[b] 0 <= x,y <= inf [/b] # using inf
[b] x,y free [/b] # free variables
# Let (x,y,z,w) belong to the cone K
[cone rquad] x,y,z,w [/cone] # rotated quadratic cone
[cone ppow '3e-01' 'a'] x1, x2, x3 [/cone] # power cone with alpha=1/3 and name 'a'
[/bounds]
```

By default all variables are free.

[variables]

This defines an ordering of variables as they should appear in the problem. This is simply a space-separated list of variable names.

[integer]

This contains a space-separated list of variables and defines the constraint that the listed variables must be integer-valued.

[hints]

This may contain only non-essential data; for example estimates of the number of variables, constraints and non-zeros. Placed before all other sections containing data this may reduce the time spent reading the file.

In the **hints** section, any subsection which is not recognized by **MOSEK** is simply ignored. In this section a hint is defined as follows:

```
[hint ITEM] value [/hint]
```

The hints recognized by **MOSEK** are:

- **numvar** (number of variables),
- **numcon** (number of linear/quadratic constraints),
- **numanz** (number of linear non-zeros in constraints),
- **numqnz** (number of quadratic non-zeros in constraints).

[solutions]

This section can contain a set of full or partial solutions to a problem. Each solution must be specified using a **[solution]**-section, i.e.

```
[solutions]
[solution]...[/solution] #solution 1
[solution]...[/solution] #solution 2
#other solutions....
[solution]...[/solution] #solution n
[/solutions]
```

The syntax of a **[solution]**-section is the following:

```
[solution SOLTYPE status=STATUS]...[/solution]
```

where **SOLTYPE** is one of the strings

- **interior**, a non-basic solution,
- **basic**, a basic solution,
- **integer**, an integer solution,

and **STATUS** is one of the strings

- **UNKNOWN**,
- **OPTIMAL**,
- **INTEGER_OPTIMAL**,
- **PRIM_FEAS**,
- **DUAL_FEAS**,
- **PRIM_AND_DUAL_FEAS**,

- NEAR_OPTIMAL,
- NEAR_PRIM_FEAS,
- NEAR_DUAL_FEAS,
- NEAR_PRIM_AND_DUAL_FEAS,
- PRIM_INFEAS_CER,
- DUAL_INFEAS_CER,
- NEAR_PRIM_INFEAS_CER,
- NEAR_DUAL_INFEAS_CER,
- NEAR_INTEGER_OPTIMAL.

Most of these values are irrelevant for input solutions; when constructing a solution for simplex hot-start or an initial solution for a mixed integer problem the safe setting is UNKNOWN.

A [solution]-section contains [con] and [var] sections. Each [con] and [var] section defines solution information for a single variable or constraint, specified as list of KEYWORD/value pairs, in any order, written as

KEYWORD=value

Allowed keywords are as follows:

- **sk**. The status of the item, where the value is one of the following strings:
 - LOW, the item is on its lower bound.
 - UPR, the item is on its upper bound.
 - FIX, it is a fixed item.
 - BAS, the item is in the basis.
 - SUPBAS, the item is super basic.
 - UNK, the status is unknown.
 - INF, the item is outside its bounds (infeasible).
- **lvl** Defines the level of the item.
- **s1** Defines the level of the dual variable associated with its lower bound.
- **su** Defines the level of the dual variable associated with its upper bound.
- **sn** Defines the level of the variable associated with its cone.
- **y** Defines the level of the corresponding dual variable (for constraints only).

A [var] section should always contain the items **sk**, **lvl**, **s1** and **su**. Items **s1** and **su** are not required for integer solutions.

A [con] section should always contain **sk**, **lvl**, **s1**, **su** and **y**.

An example of a solution section

```
[solution basic status=UNKNOWN]
[var x0] sk=LOW    lvl=5.0      [/var]
[var x1] sk=UPR    lvl=10.0     [/var]
[var x2] sk=SUPBAS lvl=2.0    s1=1.5 su=0.0 [/var]

[con c0] sk=LOW    lvl=3.0    y=0.0 [/con]
[con c0] sk=UPR    lvl=0.0    y=5.0 [/con]
[/solution]
```

- [vendor] This contains solver/vendor specific data. It accepts one argument, which is a vendor ID – for **MOSEK** the ID is simply `mosek` – and the section contains the subsection `parameters` defining solver parameters. When reading a vendor section, any unknown vendor can be safely ignored. This is described later.

Comments using the `#` may appear anywhere in the file. Between the `#` and the following line-break any text may be written, including markup characters.

11.3.3 Numbers

Numbers, when used for parameter values or coefficients, are written in the usual way by the `printf` function. That is, they may be prefixed by a sign (+ or -) and may contain an integer part, decimal part and an exponent. The decimal point is always `.` (a dot). Some examples are

```
1
1.0
.0
1.
1e10
1e+10
1e-10
```

Some *invalid* examples are

```
e10    # invalid, must contain either integer or decimal part
.      # invalid
.e10   # invalid
```

More formally, the following standard regular expression describes numbers as used:

```
[+|-]?([0-9]+[.][0-9]*|[.][0-9]+)([eE][+|-]?[0-9]+)?
```

11.3.4 Names

Variable names, constraint names and objective name may contain arbitrary characters, which in some cases must be enclosed by quotes (single or double) that in turn must be preceded by a backslash. Unquoted names must begin with a letter (`a-z` or `A-Z`) and contain only the following characters: the letters `a-z` and `A-Z`, the digits `0-9`, braces (`{` and `}`) and underscore (`_`).

Some examples of legal names:

```
an_unquoted_name
another_name{123}
'single quoted name'
"double quoted name"
"name with \\\"quote\\\" in it"
"name with []s in it"
```

11.3.5 Parameters Section

In the `vendor` section solver parameters are defined inside the `parameters` subsection. Each parameter is written as

```
[p PARAMETER_NAME] value [/p]
```

where `PARAMETER_NAME` is replaced by a **MOSEK** parameter name, usually of the form `MSK_IPAR_...`, `MSK_DPAR_...` or `MSK_SPAR_...`, and the `value` is replaced by the value of that parameter; both integer values and named values may be used. Some simple examples are

```
[vendor mosek]
[parameters]
[p MSK_IPAR_OPF_MAX_TERMS_PER_LINE] 10      [/p]
[p MSK_IPAR_OPF_WRITE_PARAMETERS]    MSK_ON [/p]
[p MSK_DPAR_DATA_TOL_BOUND_INF]      1.0e18 [/p]
[/parameters]
[/vendor]
```

11.3.6 Writing OPF Files from MOSEK

To write an OPF file then make sure the file extension is .opf.

Then modify the following parameters to define what the file should contain:

<code>MSK_IPAR_OPF_WRITE_SOL_BAS</code>	Include basic solution, if defined.
<code>MSK_IPAR_OPF_WRITE_SOL_ITG</code>	Include integer solution, if defined.
<code>MSK_IPAR_OPF_WRITE_SOL_ITR</code>	Include interior solution, if defined.
<code>MSK_IPAR_OPF_WRITE SOLUTION</code>	Include solutions if they are defined. If this is off, no solutions are included.
<code>MSK_IPAR_OPF_WRITE HEADER</code>	Include a small header with comments.
<code>MSK_IPAR_OPF_WRITE PROBLEM</code>	Include the problem itself — objective, constraints and bounds.
<code>MSK_IPAR_OPF_WRITE PARAMETE</code>	Include all parameter settings.
<code>MSK_IPAR_OPF_WRITE_HINTS</code>	Include hints about the size of the problem.

11.3.7 Examples

This section contains a set of small examples written in OPF and describing how to formulate linear, quadratic and conic problems.

Linear Example lo1.opf

Consider the example:

$$\begin{aligned} \text{maximize} \quad & 3x_0 + 1x_1 + 5x_2 + 1x_3 \\ \text{subject to} \quad & 3x_0 + 1x_1 + 2x_2 = 30, \\ & 2x_0 + 1x_1 + 3x_2 + 1x_3 \geq 15, \\ & 2x_1 + 3x_3 \leq 25, \end{aligned}$$

having the bounds

$$\begin{aligned} 0 \leq x_0 \leq \infty, \\ 0 \leq x_1 \leq 10, \\ 0 \leq x_2 \leq \infty, \\ 0 \leq x_3 \leq \infty. \end{aligned}$$

In the OPF format the example is displayed as shown in Listing 11.1.

Listing 11.1: Example of an OPF file for a linear problem.

```
[comment]
The lo1 example in OPF format
[/comment]

[hints]
[hint NUMVAR] 4 [/hint]
[hint NUMCON] 3 [/hint]
[hint NUMANZ] 9 [/hint]
[/hints]
```

(continues on next page)

```
[variables disallow_new_variables]
  x1 x2 x3 x4
[/variables]

[objective maximize 'obj']
  3 x1 + x2 + 5 x3 + x4
[/objective]

[constraints]
  [con 'c1'] 3 x1 + x2 + 2 x3      = 30 [/con]
  [con 'c2'] 2 x1 + x2 + 3 x3 + x4 >= 15 [/con]
  [con 'c3']          2 x2      + 3 x4 <= 25 [/con]
[/constraints]

[bounds]
  [b] 0 <= * [/b]
  [b] 0 <= x2 <= 10 [/b]
[/bounds]
```

Quadratic Example qo1.opf

An example of a quadratic optimization problem is

$$\begin{aligned} \text{minimize} \quad & x_1^2 + 0.1x_2^2 + x_3^2 - x_1x_3 - x_2 \\ \text{subject to} \quad & 1 \leq x_1 + x_2 + x_3, \\ & x \geq 0. \end{aligned}$$

This can be formulated in opf as shown below.

Listing 11.2: Example of an OPF file for a quadratic problem.

```
[comment]
  The qo1 example in OPF format
[/comment]

[hints]
  [hint NUMVAR] 3 [/hint]
  [hint NUMCON] 1 [/hint]
  [hint NUMANZ] 3 [/hint]
  [hint NUMQNZ] 4 [/hint]
[/hints]

[variables disallow_new_variables]
  x1 x2 x3
[/variables]

[objective minimize 'obj']
  # The quadratic terms are often written with a factor of 1/2 as here,
  # but this is not required.

  - x2 + 0.5 ( 2.0 x1 ^ 2 - 2.0 x3 * x1 + 0.2 x2 ^ 2 + 2.0 x3 ^ 2 )
[/objective]

[constraints]
  [con 'c1'] 1.0 <= x1 + x2 + x3 [/con]
[/constraints]
```

```
[bounds]
  [b] 0 <= * [/b]
[/bounds]
```

Conic Quadratic Example cqo1.opf

Consider the example:

$$\begin{aligned} \text{minimize} \quad & x_3 + x_4 + x_5 \\ \text{subject to} \quad & x_0 + x_1 + 2x_2 = 1, \\ & x_0, x_1, x_2 \geq 0, \\ & x_3 \geq \sqrt{x_0^2 + x_1^2}, \\ & 2x_4x_5 \geq x_2^2. \end{aligned}$$

Please note that the type of the cones is defined by the parameter to [cone ...]; the content of the cone-section is the names of variables that belong to the cone. The resulting OPF file is in Listing 11.3.

Listing 11.3: Example of an OPF file for a conic quadratic problem.

```
[comment]
  The cqo1 example in OPF format.
[/comment]

[hints]
  [hint NUMVAR] 6 [/hint]
  [hint NUMCON] 1 [/hint]
  [hint NUMANZ] 3 [/hint]
[/hints]

[variables disallow_new_variables]
  x1 x2 x3 x4 x5 x6
[/variables]

[objective minimize 'obj']
  x4 + x5 + x6
[/objective]

[constraints]
  [con 'c1'] x1 + x2 + 2e+00 x3 = 1e+00 [/con]
[/constraints]

[bounds]
  # We let all variables default to the positive orthant
  [b] 0 <= * [/b]

  # ...and change those that differ from the default
  [b] x4,x5,x6 free [/b]

  # Define quadratic cone: x4 >= sqrt( x1^2 + x2^2 )
  [cone quad 'k1'] x4, x1, x2 [/cone]

  # Define rotated quadratic cone: 2 x5 x6 >= x3^2
  [cone rquad 'k2'] x5, x6, x3 [/cone]
[/bounds]
```

Mixed Integer Example milo1.opf

Consider the mixed integer problem:

$$\begin{aligned} & \text{maximize} && x_0 + 0.64x_1 \\ & \text{subject to} && 50x_0 + 31x_1 \leq 250, \\ & && 3x_0 - 2x_1 \geq -4, \\ & && x_0, x_1 \geq 0 \quad \text{and integer} \end{aligned}$$

This can be implemented in OPF with the file in Listing 11.4.

Listing 11.4: Example of an OPF file for a mixed-integer linear problem.

```
[comment]
The milo1 example in OPF format
[/comment]

[hints]
[hint NUMVAR] 2 [/hint]

[/hints]

[variables disallow_new_variables]
x1 x2
[/variables]

[objective maximize 'obj']
x1 + 6.4e-1 x2
[/objective]

[constraints]
[con 'c1'] 5e+1 x1 + 3.1e+1 x2 <= 2.5e+2 [/con]
[con 'c2'] -4 <= 3 x1 - 2 x2 [/con]
[/constraints]

[bounds]
[b] 0 <= * [/b]
[/bounds]

[integer]
x1 x2
[/integer]
```

11.4 The CBF Format

This document constitutes the technical reference manual of the *Conic Benchmark Format* with file extension: `.cbf` or `.CBF`. It unifies linear, second-order cone (also known as conic quadratic), exponential cone, power cone and semidefinite optimization with mixed-integer variables. The format has been designed with benchmark libraries in mind, and therefore focuses on compact and easily parsable representations. The CBF format separates problem structure from the problem data.

11.4.1 How Instances Are Specified

This section defines the spectrum of conic optimization problems that can be formulated in terms of the keywords of the CBF format.

In the CBF format, conic optimization problems are considered in the following form:

$$\begin{aligned} \min / \max \quad & g^{obj} \\ \text{s.t.} \quad & g_i \in \mathcal{K}_i, \quad i \in \mathcal{I}, \\ & G_i \in \mathcal{K}_i, \quad i \in \mathcal{I}^{PSD}, \\ & x_j \in \mathcal{K}_j, \quad j \in \mathcal{J}, \\ & \bar{X}_j \in \mathcal{K}_j, \quad j \in \mathcal{J}^{PSD}. \end{aligned} \tag{11.9}$$

- **Variables** are either scalar variables, x_j for $j \in \mathcal{J}$, or matrix variables, \bar{X}_j for $j \in \mathcal{J}^{PSD}$. Scalar variables can also be declared as integer.
- **Constraints** are affine expressions of the variables, either scalar-valued g_i for $i \in \mathcal{I}$, or matrix-valued G_i for $i \in \mathcal{I}^{PSD}$

$$\begin{aligned} g_i &= \sum_{j \in \mathcal{J}^{PSD}} \langle F_{ij}, X_j \rangle + \sum_{j \in \mathcal{J}} a_{ij} x_j + b_i, \\ G_i &= \sum_{j \in \mathcal{J}} x_j H_{ij} + D_i. \end{aligned}$$

- The **objective function** is a scalar-valued affine expression of the variables, either to be minimized or maximized. We refer to this expression as g^{obj}

$$g^{obj} = \sum_{j \in \mathcal{J}^{PSD}} \langle F_j^{obj}, X_j \rangle + \sum_{j \in \mathcal{J}} a_j^{obj} x_j + b^{obj}.$$

As of version 4 of the format, CBF files can represent the following non-parametric cones \mathcal{K} :

- **Free domain** - A cone in the linear family defined by

$$\{x \in \mathbb{R}^n\}, \text{ for } n \geq 1.$$

- **Positive orthant** - A cone in the linear family defined by

$$\{x \in \mathbb{R}^n \mid x_j \geq 0 \text{ for } j = 1, \dots, n\}, \text{ for } n \geq 1.$$

- **Negative orthant** - A cone in the linear family defined by

$$\{x \in \mathbb{R}^n \mid x_j \leq 0 \text{ for } j = 1, \dots, n\}, \text{ for } n \geq 1.$$

- **Fixpoint zero** - A cone in the linear family defined by

$$\{x \in \mathbb{R}^n \mid x_j = 0 \text{ for } j = 1, \dots, n\}, \text{ for } n \geq 1.$$

- **Quadratic cone** - A cone in the second-order cone family defined by

$$\left\{ \begin{pmatrix} p \\ x \end{pmatrix} \in \mathbb{R} \times \mathbb{R}^{n-1}, p^2 \geq x^T x, p \geq 0 \right\}, \text{ for } n \geq 2.$$

- **Rotated quadratic cone** - A cone in the second-order cone family defined by

$$\left\{ \begin{pmatrix} p \\ q \\ x \end{pmatrix} \in \mathbb{R} \times \mathbb{R} \times \mathbb{R}^{n-2}, 2pq \geq x^T x, p \geq 0, q \geq 0 \right\}, \text{ for } n \geq 3.$$

- **Exponential cone** - A cone in the exponential cone family defined by

$$\text{cl}(S_1) = S_1 \cup S_2$$

where,

$$S_1 = \left\{ \begin{pmatrix} t \\ s \\ r \end{pmatrix} \in \mathbb{R}^3, t \geq se^{\frac{r}{s}}, s \geq 0 \right\}.$$

and,

$$S_2 = \left\{ \begin{pmatrix} t \\ s \\ r \end{pmatrix} \in \mathbb{R}^3, t \geq 0, r \leq 0, s = 0 \right\}.$$

- **Dual Exponential cone** - A cone in the exponential cone family defined by

$$\text{cl}(S_1) = S_1 \cup S_2$$

where,

$$S_1 = \left\{ \begin{pmatrix} t \\ s \\ r \end{pmatrix} \in \mathbb{R}^3, et \geq (-r)e^{\frac{s}{r}}, -r \geq 0 \right\}.$$

and,

$$S_2 = \left\{ \begin{pmatrix} t \\ s \\ r \end{pmatrix} \in \mathbb{R}^3, et \geq 0, s \geq 0, r = 0 \right\}.$$

- **Radial geometric mean cone** - A cone in the power cone family defined by

$$\left\{ \begin{pmatrix} p \\ x \end{pmatrix} \in \mathbb{R}_+^k \times \mathbb{R}^1, \left(\prod_{j=1}^k p_j \right)^{\frac{1}{k}} \geq |x| \right\}, \text{ for } n = k + 1 \geq 2.$$

- **Dual radial geometric mean cone** - A cone in the power cone family defined by

$$\left\{ \begin{pmatrix} p \\ x \end{pmatrix} \in \mathbb{R}_+^k \times \mathbb{R}^1, \left(\prod_{j=1}^k kp_j \right)^{\frac{1}{k}} \geq |x| \right\}, \text{ for } n = k + 1 \geq 2.$$

and, the following parametric cones:

- **Radial power cone** - A cone in the power cone family defined by

$$\left\{ \begin{pmatrix} p \\ x \end{pmatrix} \in \mathbb{R}_+^k \times \mathbb{R}^{n-k}, \left(\prod_{j=1}^k p_j^{\alpha_j} \right)^{\frac{1}{\sigma}} \geq \|x\|_2 \right\}, \text{ for } n \geq k \geq 1.$$

where, $\sigma = \sum_{j=1}^k \alpha_j$ and $\alpha = \mathbb{R}_{++}^k$.

- **Dual radial power cone** - A cone in the power cone family defined by

$$\left\{ \begin{pmatrix} p \\ x \end{pmatrix} \in \mathbb{R}_+^k \times \mathbb{R}^{n-k}, \left(\prod_{j=1}^k \left(\frac{\sigma p_j}{\alpha_j} \right)^{\alpha_j} \right)^{\frac{1}{\sigma}} \geq \|x\|_2 \right\}, \text{ for } n \geq k \geq 1.$$

where, $\sigma = \sum_{j=1}^k \alpha_j$ and $\alpha = \mathbb{R}_{++}^k$.

11.4.2 The Structure of CBF Files

This section defines how information is written in the CBF format, without being specific about the type of information being communicated.

All information items belong to exactly one of the three groups of information. These information groups, and the order they must appear in, are:

1. File format.
2. Problem structure.
3. Problem data.

The first group, file format, provides information on how to interpret the file. The second group, problem structure, provides the information needed to deduce the type and size of the problem instance. Finally, the third group, problem data, specifies the coefficients and constants of the problem instance.

Information items

The format is composed as a list of information items. The first line of an information item is the **KEYWORD**, revealing the type of information provided. The second line - of some keywords only - is the **HEADER**, typically revealing the size of information that follows. The remaining lines are the **BODY** holding the actual information to be specified.

KEYWORD
BODY
KEYWORD
HEADER
BODY

The **KEYWORD** determines how each line in the **HEADER** and **BODY** is structured. Moreover, the number of lines in the **BODY** follows either from the **KEYWORD**, the **HEADER**, or from another information item required to precede it.

File encoding and line width restrictions

The format is based on the US-ASCII printable character set with two extensions as listed below. Note, by definition, that none of these extensions can be misinterpreted as printable US-ASCII characters:

- A line feed marks the end of a line, carriage returns are ignored.
- Comment-lines may contain unicode characters in UTF-8 encoding.

The line width is restricted to 512 bytes, with 3 bytes reserved for the potential carriage return, line feed and null-terminator.

Integers and floating point numbers must follow the ISO C decimal string representation in the standard C locale. The format does not impose restrictions on the magnitude of, or number of significant digits in numeric data, but the use of 64-bit integers and 64-bit IEEE 754 floating point numbers should be sufficient to avoid loss of precision.

Comment-line and whitespace rules

The format allows single-line comments respecting the following rule:

- Lines having first byte equal to '#' (US-ASCII 35) are comments, and should be ignored. Comments are only allowed between information items.

Given that a line is not a comment-line, whitespace characters should be handled according to the following rules:

- Leading and trailing whitespace characters should be ignored.
 - The separator between multiple pieces of information on one line, is either one or more whitespace characters.
- Lines containing only whitespace characters are empty, and should be ignored. Empty lines are only allowed between information items.

11.4.3 Problem Specification

The problem structure

The problem structure defines the objective sense, whether it is minimization and maximization. It also defines the index sets, \mathcal{J} , \mathcal{J}^{PSD} , \mathcal{I} and \mathcal{I}^{PSD} , which are all numbered from zero, $\{0, 1, \dots\}$, and empty until explicitly constructed.

- **Scalar variables** are constructed in vectors restricted to a conic domain, such as $(x_0, x_1) \in \mathbb{R}_+^2$, $(x_2, x_3, x_4) \in \mathcal{Q}^3$, etc. In terms of the Cartesian product, this generalizes to

$$x \in \mathcal{K}_1^{n_1} \times \mathcal{K}_2^{n_2} \times \cdots \times \mathcal{K}_k^{n_k}$$

which in the CBF format becomes:

```
VAR
n k
K1 n1
K2 n2
...
Kk nk
```

where $\sum_i n_i = n$ is the total number of scalar variables. The list of supported cones is found in Table 11.3. Integrality of scalar variables can be specified afterwards.

- **PSD variables** are constructed one-by-one. That is, $X_j \succeq \mathbf{0}^{n_j \times n_j}$ for $j \in \mathcal{J}^{PSD}$, constructs a matrix-valued variable of size $n_j \times n_j$ restricted to be symmetric positive semidefinite. In the CBF format, this list of constructions becomes:

```

PSDVAR
N
n1
n2
...
nN

```

where N is the total number of PSD variables.

- **Scalar constraints** are constructed in vectors restricted to a conic domain, such as $(g_0, g_1) \in \mathbb{R}_+^2$, $(g_2, g_3, g_4) \in \mathcal{Q}^3$, etc. In terms of the Cartesian product, this generalizes to

$$g \in \mathcal{K}_1^{m_1} \times \mathcal{K}_2^{m_2} \times \cdots \times \mathcal{K}_k^{m_k}$$

which in the CBF format becomes:

```

CON
m k
K1 m1
K2 m2
..
Kk mk

```

where $\sum_i m_i = m$ is the total number of scalar constraints. The list of supported cones is found in [Table 11.3](#).

- **PSD constraints** are constructed one-by-one. That is, $G_i \succeq \mathbf{0}^{m_i \times m_i}$ for $i \in \mathcal{I}^{PSD}$, constructs a matrix-valued affine expressions of size $m_i \times m_i$ restricted to be symmetric positive semidefinite. In the CBF format, this list of constructions becomes

```

PSDCON
M
m1
m2
..
mM

```

where M is the total number of PSD constraints.

With the objective sense, variables (with integer indications) and constraints, the definitions of the many affine expressions follow in problem data.

Problem data

The problem data defines the coefficients and constants of the affine expressions of the problem instance. These are considered zero until explicitly defined, implying that instances with no keywords from this information group are, in fact, valid. Duplicating or conflicting information is a failure to comply with the standard. Consequently, two coefficients written to the same position in a matrix (or to transposed positions in a symmetric matrix) is an error.

The affine expressions of the objective, g^{obj} , of the scalar constraints, g_i , and of the PSD constraints, G_i , are defined separately. The following notation uses the standard trace inner product for matrices, $\langle X, Y \rangle = \sum_{i,j} X_{ij} Y_{ij}$.

- The affine expression of the objective is defined as

$$g^{obj} = \sum_{j \in \mathcal{J}^{PSD}} \langle F_j^{obj}, X_j \rangle + \sum_{j \in \mathcal{J}} a_j^{obj} x_j + b^{obj},$$

in terms of the symmetric matrices, F_j^{obj} , and scalars, a_j^{obj} and b^{obj} .

- The affine expressions of the scalar constraints are defined, for $i \in \mathcal{I}$, as

$$g_i = \sum_{j \in \mathcal{J}^{PSD}} \langle F_{ij}, X_j \rangle + \sum_{j \in \mathcal{J}} a_{ij} x_j + b_i,$$

in terms of the symmetric matrices, F_{ij} , and scalars, a_{ij} and b_i .

- The affine expressions of the PSD constraints are defined, for $i \in \mathcal{I}^{PSD}$, as

$$G_i = \sum_{j \in \mathcal{J}} x_j H_{ij} + D_i,$$

in terms of the symmetric matrices, H_{ij} and D_i .

List of cones

The format uses an explicit syntax for symmetric positive semidefinite cones as shown above. For scalar variables and constraints, constructed in vectors, the supported conic domains and their sizes are given as follows.

Table 11.3: Cones available in the CBF format

Name	CBF keyword	Cone family	Cone size
Free domain	F	linear	$n \geq 1$
Positive orthant	L+	linear	$n \geq 1$
Negative orthant	L-	linear	$n \geq 1$
Fixpoint zero	L=	linear	$n \geq 1$
Quadratic cone	Q	second-order	$n \geq 1$
Rotated quadratic cone	QR	second-order	$n \geq 2$
Exponential cone	EXP	exponential	$n = 3$
Dual exponential cone	EXP*	exponential	$n = 3$
Radial geometric mean cone	GMEANABS	power	$n = k + 1 \geq 2$
Dual radial geometric mean cone	GMEANABS*	power	$n = k + 1 \geq 2$
Radial power cone (parametric)	POW	power	$n \geq k \geq 1$
Dual radial power cone (parametric)	POW*	power	$n \geq k \geq 1$

11.4.4 File Format Keywords

VER

Description: The version of the Conic Benchmark Format used to write the file.

HEADER: None

BODY: One line formatted as:

INT

This is the version number.

Must appear exactly once in a file, as the first keyword.

POWCONES

Description: Define a lookup table for power cone domains.

HEADER: One line formatted as:

INT INT

This is the number of cones to be specified and the combined length of their dense parameter vectors.

BODY: A list of chunks each specifying the dense parameter vector of a power cone.

CHUNKHEADER: One line formatted as:

INT

This is the parameter vector length.

CHUNKBODY: A list of lines formatted as:

REAL

This is the parameter vector values. The number of lines should match the number stated in the chunk header.

The cone specified at index k (with 0-based indexing) is registered under the CBF name @k:POW.

POW*CONES

Description: Define a lookup table for dual power cone domains.

HEADER: One line formatted as:

INT INT

This is the number of cones to be specified and the combined length of their dense parameter vectors.

BODY: A list of chunks each specifying the dense parameter vector of a dual power cone.

CHUNKHEADER: One line formatted as:

INT

This is the parameter vector length.

CHUNKBODY: A list of lines formatted as:

REAL

This is the parameter vector values. The number of lines should match the number stated in the chunk header.

The cone specified at index k (with 0-based indexing) is registered under the CBF name @k:POW*.

OBJSENSE

Description: Define the objective sense.

HEADER: None

BODY: One line formatted as:

STR

having MIN indicates minimize, and MAX indicates maximize. Upper-case letters are required.

Must appear exactly once in a file.

PSDVAR

Description: Construct the PSD variables.

HEADER: One line formatted as:

INT

This is the number of PSD variables in the problem.

BODY: A list of lines formatted as:

INT

This indicates the number of rows (equal to the number of columns) in the matrix-valued PSD variable. The number of lines should match the number stated in the header.

VAR

Description: Construct the scalar variables.

HEADER: One line formatted as:

```
INT INT
```

This is the number of scalar variables, followed by the number of conic domains they are restricted to.

BODY: A list of lines formatted as:

```
STR INT
```

This indicates the cone name (see [Table 11.3](#)), and the number of scalar variables restricted to this cone. These numbers should add up to the number of scalar variables stated first in the header. The number of lines should match the second number stated in the header.

INT

Description: Declare integer requirements on a selected subset of scalar variables.

HEADER: one line formatted as:

```
INT
```

This is the number of integer scalar variables in the problem.

BODY: a list of lines formatted as:

```
INT
```

This indicates the scalar variable index $j \in \mathcal{J}$. The number of lines should match the number stated in the header.

Can only be used after the keyword VAR.

PSDCON

Description: Construct the PSD constraints.

HEADER: One line formatted as:

```
INT
```

This is the number of PSD constraints in the problem.

BODY: A list of lines formatted as:

```
INT
```

This indicates the number of rows (equal to the number of columns) in the matrix-valued affine expression of the PSD constraint. The number of lines should match the number stated in the header.

Can only be used after these keywords: PSDVAR, VAR.

CON

Description: Construct the scalar constraints.

HEADER: One line formatted as:

```
INT INT
```

This is the number of scalar constraints, followed by the number of conic domains they restrict to.

BODY: A list of lines formatted as:

```
STR INT
```

This indicates the cone name (see [Table 11.3](#)), and the number of affine expressions restricted to this cone. These numbers should add up to the number of scalar constraints stated first in the header. The number of lines should match the second number stated in the header.

Can only be used after these keywords: PSDVAR, VAR

OBJFCOORD

Description: Input sparse coordinates (quadruplets) to define the symmetric matrices F_j^{obj} , as used in the objective.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT INT INT REAL
```

This indicates the PSD variable index $j \in \mathcal{J}^{PSD}$, the row index, the column index and the coefficient value. The number of lines should match the number stated in the header.

OBJACOORD

Description: Input sparse coordinates (pairs) to define the scalars, a_j^{obj} , as used in the objective.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT REAL
```

This indicates the scalar variable index $j \in \mathcal{J}$ and the coefficient value. The number of lines should match the number stated in the header.

OBJBCOORD

Description: Input the scalar, b^{obj} , as used in the objective.

HEADER: None.

BODY: One line formatted as:

```
REAL
```

This indicates the coefficient value.

FCOORD

Description: Input sparse coordinates (quintuplets) to define the symmetric matrices, F_{ij} , as used in the scalar constraints.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT INT INT INT REAL
```

This indicates the scalar constraint index $i \in \mathcal{I}$, the PSD variable index $j \in \mathcal{J}^{PSD}$, the row index, the column index and the coefficient value. The number of lines should match the number stated in the header.

ACOORD

Description: Input sparse coordinates (triplets) to define the scalars, a_{ij} , as used in the scalar constraints.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT INT REAL
```

This indicates the scalar constraint index $i \in \mathcal{I}$, the scalar variable index $j \in \mathcal{J}$ and the coefficient value. The number of lines should match the number stated in the header.

BCOORD

Description: Input sparse coordinates (pairs) to define the scalars, b_i , as used in the scalar constraints.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT REAL
```

This indicates the scalar constraint index $i \in \mathcal{I}$ and the coefficient value. The number of lines should match the number stated in the header.

HCOORD

Description: Input sparse coordinates (quintuplets) to define the symmetric matrices, H_{ij} , as used in the PSD constraints.

HEADER: One line formatted as:

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT INT INT INT REAL
```

This indicates the PSD constraint index $i \in \mathcal{I}^{PSD}$, the scalar variable index $j \in \mathcal{J}$, the row index, the column index and the coefficient value. The number of lines should match the number stated in the header.

DCOORD

Description: Input sparse coordinates (quadruplets) to define the symmetric matrices, D_i , as used in the PSD constraints.

HEADER: One line formatted as

```
INT
```

This is the number of coordinates to be specified.

BODY: A list of lines formatted as:

```
INT INT INT REAL
```

This indicates the PSD constraint index $i \in \mathcal{I}^{PSD}$, the row index, the column index and the coefficient value. The number of lines should match the number stated in the header.

11.4.5 CBF Format Examples

Minimal Working Example

The conic optimization problem (11.10) , has three variables in a quadratic cone - first one is integer - and an affine expression in domain 0 (equality constraint).

$$\begin{aligned} & \text{minimize} && 5.1 x_0 \\ & \text{subject to} && 6.2 x_1 + 7.3 x_2 - 8.4 \in \{0\} \\ & && x \in \mathbb{Q}^3, x_0 \in \mathbb{Z}. \end{aligned} \tag{11.10}$$

Its formulation in the Conic Benchmark Format begins with the version of the CBF format used, to safeguard against later revisions.

```
VER
4
```

Next follows the problem structure, consisting of the objective sense, the number and domain of variables, the indices of integer variables, and the number and domain of scalar-valued affine expressions (i.e., the equality constraint).

```

```

This concludes the example.

Mixing Linear, Second-order and Semidefinite Cones

The conic optimization problem (11.11), has a semidefinite cone, a quadratic cone over unordered subindices, and two equality constraints.

$$\begin{aligned}
 & \text{minimize} && \left\langle \begin{bmatrix} 2 & 1 & 0 \\ 1 & 2 & 1 \\ 0 & 1 & 2 \end{bmatrix}, X_1 \right\rangle + x_1 \\
 & \text{subject to} && \left\langle \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}, X_1 \right\rangle + x_1 = 1.0, \\
 & && \left\langle \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}, X_1 \right\rangle + x_0 + x_2 = 0.5, \\
 & && x_1 \geq \sqrt{x_0^2 + x_2^2}, \\
 & && X_1 \succeq \mathbf{0}.
 \end{aligned} \tag{11.11}$$

The equality constraints are easily rewritten to the conic form, $(g_0, g_1) \in \{0\}^2$, by moving constants such that the right-hand-side becomes zero. The quadratic cone does not fit under the VAR keyword in this variable permutation. Instead, it takes a scalar constraint $(g_2, g_3, g_4) = (x_1, x_0, x_2) \in Q^3$, with scalar variables constructed as $(x_0, x_1, x_2) \in \mathbb{R}^3$. Its formulation in the CBF format is reported in the following list

```

Mixing Semidefinite Variables and Linear Matrix Inequalities

The standard forms in semidefinite optimization are usually based either on semidefinite variables or linear matrix inequalities. In the CBF format, both forms are supported and can even be mixed as shown.

$$\begin{aligned} \text{minimize} \quad & \left\langle \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}, X_1 \right\rangle + x_1 + x_2 + 1 \\ \text{subject to} \quad & \left\langle \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}, X_1 \right\rangle - x_1 - x_2 \geq 0.0, \\ & x_1 \begin{bmatrix} 0 & 1 \\ 1 & 3 \end{bmatrix} + x_2 \begin{bmatrix} 3 & 1 \\ 1 & 0 \end{bmatrix} - \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \succeq \mathbf{0}, \\ & X_1 \succeq \mathbf{0}. \end{aligned} \tag{11.12}$$

Its formulation in the CBF format is written in what follows

```

The exponential cone

The conic optimization problem (11.13), has one equality constraint, one quadratic cone constraint and an exponential cone constraint.

$$\begin{aligned} & \text{minimize} && x_0 - x_3 \\ & \text{subject to} && x_0 + 2x_1 - x_2 \in \{0\} \\ & && (5.0, x_0, x_1) \in \mathcal{Q}^3 \\ & && (x_2, 1.0, x_3) \in EXP. \end{aligned} \tag{11.13}$$

The nonlinear conic constraints enforce $\sqrt{x_0^2 + x_1^2} \leq 0.5$ and $x_3 \leq \log(x_2)$.

Parametric cones

The problem (11.14), has three variables in a power cone with parameter $\alpha_1 = (1, 1)$ and two power cone constraints each with parameter $\alpha_0 = (8, 1)$.

$$\begin{aligned} & \text{minimize} && x_3 \\ & \text{subject to} && (1.0, x_1, x_1 + x_2) \in POW_{\alpha_0} \\ & && (1.0, x_2, x_1 + x_2) \in POW_{\alpha_0} \\ & && x \in POW_{\alpha_1}. \end{aligned} \tag{11.14}$$

The nonlinear conic constraints enforce $x_3 \leq x_1 x_2$ and $x_1 + x_2 \leq \min(x_1^{\frac{1}{9}}, x_2^{\frac{1}{9}})$.

11.5 The PTF Format

The PTF format is a human-readable, natural text format that supports all linear, conic and mixed-integer features.

11.5.1 The overall format

The format is indentation based, where each section is started by a head line and followed by a section body with deeper indentation than the head line. For example:

```

Header line
  Body line 1
  Body line 1
  Body line 1

```

Section can also be nested:

```

Header line A
  Body line in A
  Header line A.1
    Body line in A.1
    Body line in A.1
  Body line in A

```

The indentation of blank lines is ignored, so a subsection can contain a blank line with no indentation. The character # defines a line comment and anything between the # character and the end of the line is ignored.

In a PTF file, the first section must be a Task section. The order of the remaining section is arbitrary, and sections may occur multiple times or not at all.

MOSEK will ignore any top-level section it does not recognize.

Names

In the description of the format we use following definitions for name strings:

```
NAME: PLAIN_NAME | QUOTED_NAME
PLAIN_NAME: [a-zA-Z_] [a-zA-Z0-9_-.!]
QUOTED_NAME: """ ( [^'\\r\n] | "\\\" ( [\r\n] | "x" [0-9a-fA-F] [0-9a-fA-F] ) )* """
```

Expressions

An expression is a sum of terms. A term is either a linear term (a coefficient and a variable name, where the coefficient can be left out if it is 1.0), or a matrix inner product.

An expression:

```
EXPR: EMPTY | ( [+ -] TERM )*
TERM: LINEAR_TERM | MATRIX_TERM
```

A linear term

```
LINEAR_TERM: FLOAT? NAME
```

A matrix term

```
MATRIX_TERM: "<" ( [+ -] FLOAT? NAME)* ";" NAME ">"
```

Here the right-hand name is the name of a (semidefinite) matrix variable, and the left-hand side is a sum of symmetric matrices. The actual matrices are defined in a separate section.

Expressions can span multiple lines by giving subsequent lines a deeper indentation.

For example following two section are equivalent:

```
# Everything on one line:
+ x1 + x2 + x3 + x4

# Split into multiple lines:
+ x1
  + x2
  + x3
  + x4
```

11.5.2 Task section

The first section of the file must be a Task. The text in this section is not used and may contain comments, or meta-information from the writer or about the content.

Format:

```
Task NAME
  Anything goes here...
```

NAME is the task name.

11.5.3 Objective section

The **Objective** section defines the objective name, sense and function. The format:

```
"Objective" NAME?  
  ( "Minimize" | "Maximize" ) EXPR
```

For example:

```
Objective 'obj'  
  Minimize + x1 + 0.2 x2 + < M1 ; X1 >
```

11.5.4 Constraints section

The constraints section defines a series of constraints. A constraint defines a term $A \cdot x + b \in K$. For linear constraints A is just one row, while for conic constraints it can be multiple rows. If a constraint spans multiple rows these can either be written inline separated by semi-colons, or each expression in a separate sub-section.

Simple linear constraints:

```
"Constraints"  
  NAME? "[" [-+] (FLOAT | "inf") (";" [-+] (FLOAT | "inf") )? "] " EXPR
```

If the brackets contain two values, they are used as upper and lower bounds. If they contain one value the constraint is an equality.

For example:

```
Constraints  
  # Ranged constraint  
  'c1' [0;10] + x1 + x2 + x3  
  # Fixed constraint, expression equals to 0  
  [0] + x1 + x2 + x3  
  # Nonnegative constraint  
  [0;+inf] + x1 + x2 + x3
```

Constraint blocks put the expression either in a subsection or inline. The cone type (domain) is written in the brackets, and **MOSEK** currently supports following types:

- **Major (primal) cones:**

- QUAD(N) or SOC(N): Second order cone of dimension N.
- RQUAD(N) or RSOC(N): Rotated second order cone of dimension N.
- PEXP: Primal exponential cone of dimension 3.
- PPOW(N,P): Primal power cone of dimension N with parameter P (float between 0 and 1).
- PPOW(N;ALPHA): Primal power cone of dimension N with exponent sequence ALPHA (comma-separated list of floats).
- PGEOOMEAN(N): Primal geometric mean cone of dimension N.
- SVECPSD(N): Vectorized symmetric positive semidefinite cone of dimension N (N must be of the form D*(D+1)/2).

- **Dual cones:**

- DEXP: Dual exponential cone of dimension 3.
- DPOW(N,P): Dual power cone of dimension N with parameter P (float between 0 and 1).
- DPOW(N;ALPHA): Dual power cone of dimension N with exponent sequence ALPHA (comma-separated list of floats).
- DGEOOMEAN(N): Dual geometric mean cone of dimension N.

- **Linear cones:**

- FREE(N) The free (unbounded) cone of dimension N.
- POSITIVE(N) The non-negative cone of dimension N.

- NEGATIVE(N) The non-positive cone of dimension N.
- ZERO(N) The zero-cone of dimension N.

See Sec. 10.5 for definitions of the parameters.

```
"Constraints"
NAME? "[" DOMAIN "]"
EXPR_LIST
```

For example:

```
Constraints
'K1' [PPOW(5;3,1)]
+ x1 + x2
+ x2 + x3
+ 1.0
+ x1
+ x3
'K2' [RQUAD(3)]
+ x1 + x2
+ x2 + x3
+ x3 + x1
```

11.5.5 Variables section

Any variable used in an expression must be defined in a variable section. The variable section defines each variable domain.

```
"Variables"
NAME "[" [-+] (FLOAT | "inf") (";" [-+] (FLOAT | "inf"))? "]"
NAME "[" "PSD" (INT) "]"
```

For example, a linear variable

```
Variables
# Nonnegative variable
x1 [0;inf]
# Ranged variable
x2 [0;1]
# Fixed variable
x3 [5.0]
# 5-dimensional symmetric matrix variable
X [PSD(5)]
```

11.5.6 Integer section

This section contains a list of variables that are integral. For example:

```
Integer
  x1 x2 x3
```

11.5.7 SymmetricMatrixes section

This section defines the symmetric matrixes used for matrix coefficients in matrix inner product terms. The section lists named matrixes, each with a size and a number of non-zeros. Only non-zeros in the lower triangular part should be defined.

```
"SymmetricMatrixes"
  NAME "SYMMAT" "(" INT ")"  ( "(" INT "," INT "," FLOAT ")" )*
  ...
  ...
```

For example:

```
SymmetricMatrixes
  M1 SYMMAT(3) (0,0,1.0) (1,1,2.0) (2,1,0.5)
  M2 SYMMAT(3)
    (0,0,1.0)
    (1,1,2.0)
    (2,1,0.5)
```

11.5.8 Solutions section

Each subsection defines a solution. A solution defines for each constraint and for each variable exactly one primal value and either one (for conic domains) or two (for linear domains) dual values. The values follow the same logic as in the **MOSEK C API**. A primal and a dual solution status defines the meaning of the values primal and dual (solution, certificate, unknown, etc.)

The format is this:

```
"Solutions"
  "Solution" WHICHSOL
    "ProblemStatus" PROSTA PROSTA?
  "SolutionStatus" SOLSTA SOLSTA?
  "Objective" FLOAT FLOAT_OR_NONE
  "Variables"
    # Linear variable status: level, slx, sus
    NAME "[" STATUS "]"
      FLOAT FLOAT_OR_NONE FLOAT_OR_NONE
  "Constraints"
    # Linear variable status: level, slx, sus
    NAME "[" STATUS "]"
      FLOAT FLOAT_OR_NONE FLOAT_OR_NONE
    # Conic constraint status: level, doty
    NAME
      "[" STATUS "]"
        FLOAT FLOAT_OR_NONE
```

Nonexistent values (for example, dual values for an integer solution) are replaced with a single dot (.):

```
FLOAT_OR_NONE = FLOAT | .
```

Following values for WHICHSOL are supported:

- **interior** Interior solution, the result of an interior-point solver.
- **basic** Basic solution, as produced by a simplex solver.
- **integer** Integer solution, the solution to a mixed-integer problem. This does not define a dual solution.

Following values for PROSTA are supported:

- **unknown** The problem status is unknown
- **feasible** The problem has been proven feasible
- **infeasible** The problem has been proven infeasible
- **illposed** The problem has been proved to be ill posed
- **infeasible_or_unbounded** The problem is infeasible or unbounded

Following values for SOLSTA are supported:

- **unknown** The solution status is unknown
- **feasible** The solution is feasible
- **optimal** The solution is optimal
- **infeas_cert** The solution is a certificate of infeasibility
- **illposed_cert** The solution is a certificate of illposedness

Following values for STATUS are supported:

- **unknown** The value is unknown
- **super_basic** The value is super basic
- **at_lower** The value is basic and at its lower bound
- **at_upper** The value is basic and at its upper bound
- **fixed** The value is basic fixed
- **infinite** The value is at infinity

11.5.9 Examples

Linear example lo1.ptf

```
Task ''
    # Written by MOSEK v10.0.13
    # problemtype: Linear Problem
    # number of linear variables: 4
    # number of linear constraints: 3
    # number of old-style A nonzeros: 9
Objective obj
    Maximize + 3 x1 + x2 + 5 x3 + x4
Constraints
    c1 [3e+1] + 3 x1 + x2 + 2 x3

```

11.6 The Task Format

The Task format is **MOSEK**'s native binary format. It contains a complete image of a **MOSEK** task, i.e.

- Problem data: Linear, conic, semidefinite and quadratic data
- Problem item names: Variable names, constraints names, cone names etc.
- Parameter settings
- Solutions

There are a few things to be aware of:

- Status of a solution read from a file will *always* be unknown.
- Parameter settings in a task file *always override* any parameters set on the command line or in a parameter file.

The format is based on the *TAR* (USTar) file format. This means that the individual pieces of data in a `.task` file can be examined by unpacking it as a *TAR* file. Please note that the inverse may not work: Creating a file using *TAR* will most probably not create a valid **MOSEK** Task file since the order of the entries is important.

11.7 The JSON Format

MOSEK provides the possibility to read/write problems and solutions in JSON format. The official JSON website <http://www.json.org> provides plenty of information along with the format definition. JSON is an industry standard for data exchange and JSON files can be easily written and read in most programming languages using dedicated libraries.

MOSEK uses two JSON-based formats:

- **JTASK**, for storing problem instances together with solutions and parameters. The JTASK format contains the same information as a native **MOSEK** task *task format*, that is a very close representation of the internal data storage in the task object.

You can write a JTASK file specifying the extension `.jtask`. When the parameter `MSK_IPAR_WRITE_JSON_INDENTATION` is set the JTASK file will be indented to slightly improve readability.

- **JSOL**, for storing solutions and information items.

You can write a JSOL solution file using the option `-jsolo`. When the parameter `MSK_IPAR_WRITE_JSON_INDENTATION` is set the JSOL file will be indented to slightly improve readability.

You can read a JSOL solution into an existing task file using the option `-jsoli`. Only the *Task/solutions* section of the data will be taken into consideration.

11.7.1 JTASK Specification

The JTASK is a dictionary containing the following sections. All sections are optional and can be omitted if irrelevant for the problem.

- **\$schema:** JSON schema.
- **Task/name:** The name of the task (string).
- **Task/INFO:** Information about problem data dimensions and similar. These are treated as hints when reading the file.
 - **numvar:** number of variables (int32).
 - **numcon:** number of constraints (int32).
 - **numcone:** number of cones (int32, deprecated).
 - **numbarvar:** number of symmetric matrix variables (int32).
 - **numanz:** number of nonzeros in A (int64).
 - **numsymmat:** number of matrices in the symmetric matrix storage E (int64).
 - **numafe:** number of affine expressions in AFE storage (int64).
 - **numfnz:** number of nonzeros in F (int64).
 - **numacc:** number of affine conic constraints (ACCs) (int64).
 - **numdjc:** number of disjunctive constraints (DJCs) (int64).
 - **numdom:** number of domains (int64).
 - **mosekver:** MOSEK version (list(int32)).
- **Task/data:** Numerical and structural data of the problem.
 - **var:** Information about variables. All fields present must have the same length as **bk**. All or none of **bk**, **bl**, and **bu** must appear.
 - * **name:** Variable names (list(string)).
 - * **bk:** Bound keys (list(string)).
 - * **bl:** Lower bounds (list(double)).
 - * **bu:** Upper bounds (list(double)).
 - * **type:** Variable types (list(string)).
 - **con:** Information about linear constraints. All fields present must have the same length as **bk**. All or none of **bk**, **bl**, and **bu** must appear.
 - * **name:** Constraint names (list(string)).
 - * **bk:** Bound keys (list(string)).
 - * **bl:** Lower bounds (list(double)).
 - * **bu:** Upper bounds (list(double)).
 - **barvar:** Information about symmetric matrix variables. All fields present must have the same length as **dim**.
 - * **name:** Barvar names (list(string)).
 - * **dim:** Dimensions (list(int32)).
 - **objective:** Information about the objective.
 - * **name:** Objective name (string).
 - * **sense:** Objective sense (string).
 - * **c:** The linear part c of the objective as a sparse vector. Both arrays must have the same length.
 - **subj:** indices of nonzeros (list(int32)).
 - **val:** values of nonzeros (list(double)).
 - * **cfix:** Constant term in the objective (double).

- * **Q**: The quadratic part Q^o of the objective as a sparse matrix, only lower-triangular part included. All arrays must have the same length.
 - **subi**: row indices of nonzeros (list(int32)).
 - **subj**: column indices of nonzeros (list(int32)).
 - **val**: values of nonzeros (list(double)).
- * **barc**: The semidefinite part \bar{C} of the objective (list). Each element of the list is a list describing one entry \bar{C}_j using three fields:
 - index j (int32).
 - weights of the matrices from the storage E forming \bar{C}_j (list(double)).
 - indices of the matrices from the storage E forming \bar{C}_j (list(int64)).
- **A**: The linear constraint matrix A as a sparse matrix. All arrays must have the same length.
 - * **subi**: row indices of nonzeros (list(int32)).
 - * **subj**: column indices of nonzeros (list(int32)).
 - * **val**: values of nonzeros (list(double)).
- **bara**: The semidefinite part \bar{A} of the constraints (list). Each element of the list is a list describing one entry \bar{A}_{ij} using four fields:
 - index i (int32).
 - index j (int32).
 - weights of the matrices from the storage E forming \bar{A}_{ij} (list(double)).
 - indices of the matrices from the storage E forming \bar{A}_{ij} (list(int64)).
- **AFE**: The affine expression storage.
 - * **numafe**: number of rows in the storage (int64).
 - * **F**: The matrix F as a sparse matrix. All arrays must have the same length.
 - **subi**: row indices of nonzeros (list(int64)).
 - **subj**: column indices of nonzeros (list(int32)).
 - **val**: values of nonzeros (list(double)).
 - * **g**: The vector g of constant terms as a sparse vector. Both arrays must have the same length.
 - **subi**: indices of nonzeros (list(int64)).
 - **val**: values of nonzeros (list(double)).
 - * **barf**: The semidefinite part \bar{F} of the expressions in AFE storage (list). Each element of the list is a list describing one entry \bar{F}_{ij} using four fields:
 - index i (int64).
 - index j (int32).
 - weights of the matrices from the storage E forming \bar{F}_{ij} (list(double)).
 - indices of the matrices from the storage E forming \bar{F}_{ij} (list(int64)).
- **domains**: Information about domains. All fields present must have the same length as **type**.
 - * **name**: Domain names (list(string)).
 - * **type**: Description of the type of each domain (list). Each element of the list is a list describing one domain using at least one field:
 - domain type (string).
 - (except **pexp**, **dexp**) dimension (int64).
 - (only **ppow**, **dpow**) weights (list(double)).
- **ACC**: Information about affine conic constraints (ACC). All fields present must have the same length as **domain**.
 - * **name**: ACC names (list(string)).
 - * **domain**: Domains (list(int64)).
 - * **afeidx**: AFE indices, grouped by ACC (list(list(int64))).
 - * **b**: constant vectors b , grouped by ACC (list(list(double))).

- **DJC**: Information about disjunctive constraints (DJC). All fields present must have the same length as `termsize`.
 - * `name`: DJC names (list(string)).
 - * `termsize`: Term sizes, grouped by DJC (list(list(int64))).
 - * `domain`: Domains, grouped by DJC (list(list(int64))).
 - * `afeidx`: AFE indices, grouped by DJC (list(list(int64))).
 - * `b`: constant vectors b , grouped by DJC (list(list(double))).
- **MatrixStore**: The symmetric matrix storage E (list). Each element of the list is a list describing one entry E using four fields in sparse matrix format, lower-triangular part only:
 - * dimension (int32).
 - * row indices of nonzeros (list(int32)).
 - * column indices of nonzeros (list(int32)).
 - * values of nonzeros (list(double)).
- **Q**: The quadratic part Q^c of the constraints (list). Each element of the list is a list describing one entry Q_i^c using four fields in sparse matrix format, lower-triangular part only:
 - * the row index i (int32).
 - * row indices of nonzeros (list(int32)).
 - * column indices of nonzeros (list(int32)).
 - * values of nonzeros (list(double)).
- **qcone** (deprecated). The description of cones. All fields present must have the same length as `type`.
 - * `name`: Cone names (list(string)).
 - * `type`: Cone types (list(string)).
 - * `par`: Additional cone parameters (list(double)).
 - * `members`: Members, grouped by cone (list(list(int32))).

- **Task/solutions**: Solutions. This section can contain up to three subsections called:

- `interior`
- `basic`
- `integer`

corresponding to the three solution types in MOSEK. Each of these sections has the same structure:

- `prosta`: problem status (string).
- `solsta`: solution status (string).
- `xx`, `xc`, `y`, `slc`, `suc`, `slx`, `sux`, `snx`: one for each component of the solution of the same name (list(double)).
- `skx`, `skc`, `skn`: status keys (list(string)).
- `doyt`: the dual \hat{y} solution, grouped by ACC (list(list(double))).
- `barx`, `bars`: the primal/dual semidefinite solution, grouped by matrix variable (list(list(double))).

- **Task/parameters**: Parameters.

- `iparam`: Integer parameters (dictionary). A dictionary with entries of the form `name:value`, where `name` is a shortened parameter name (without leading `MSK_IPAR_`) and `value` is either an integer or string if the parameter takes values from an enum.
- `dparam`: Double parameters (dictionary). A dictionary with entries of the form `name:value`, where `name` is a shortened parameter name (without leading `MSK_DPAR_`) and `value` is a double.
- `spparam`: String parameters (dictionary). A dictionary with entries of the form `name:value`, where `name` is a shortened parameter name (without leading `MSK_SPAR_`) and `value` is a string. Note that this section is allowed but MOSEK ignores it both when writing and reading JTAK files.

11.7.2 JSOL Specification

The JSOL is a dictionary containing the following sections. All sections are optional and can be omitted if irrelevant for the problem.

- **\$schema:** JSON schema.
- **Task/name:** The name of the task (string).
- **Task/solutions:** Solutions. This section can contain up to three subsections called:
 - **interior**
 - **basic**
 - **integer**

corresponding to the three solution types in MOSEK. Each of these section has the same structure:

- **prosta:** problem status (string).
- **solsta:** solution status (string).
- **xx, xc, y, slc, suc, slx, sux, snx:** one for each component of the solution of the same name (list(double)).
- **skx, skc, skn:** status keys (list(string)).
- **dobj:** the dual \dot{y} solution, grouped by ACC (list(list(double))).
- **barx, bars:** the primal/dual semidefinite solution, grouped by matrix variable (list(list(double))).
- **Task/information:** Information items from the optimizer.
 - **int32:** int32 information items (dictionary). A dictionary with entries of the form **name: value**.
 - **int64:** int64 information items (dictionary). A dictionary with entries of the form **name: value**.
 - **double:** double information items (dictionary). A dictionary with entries of the form **name: value**.

11.8 The Solution File Format

MOSEK can output solutions to a text file:

- *basis solution file* (extension .bas) if the problem is optimized using the simplex optimizer or basis identification is performed,
- *interior solution file* (extension .sol) if a problem is optimized using the interior-point optimizer and no basis identification is required,
- *integer solution file* (extension .int) if the problem is solved with the mixed-integer optimizer.

All solution files have the format:

```

NAME : <problem name>
PROBLEM STATUS : <status of the problem>
SOLUTION STATUS : <status of the solution>
OBJECTIVE NAME : <name of the objective function>
PRIMAL OBJECTIVE : <primal objective value corresponding to the solution>
DUAL OBJECTIVE : <dual objective value corresponding to the solution>

CONSTRAINTS

```

(continues on next page)

SYMMETRIC MATRIX VARIABLES

INDEX	NAME	I	J	PRIMAL	DUAL
?	<name>	<a value>	<a value>	<a value>	<a value>

The fields ?, ?? and <> will be filled with problem and solution specific information as described below. The solution contains sections corresponding to parts of the input. Empty sections may be omitted and fields in [] are optional, depending on what type of problem is solved. The notation below follows the **MOSEK** naming convention for parts of the solution as defined in the problem specifications in Sec. 7.

- HEADER

In this section, first the name of the problem is listed and afterwards the problem and solution status are shown. Next the primal and dual objective values are displayed.

- CONSTRAINTS

- INDEX: A sequential index assigned to the constraint by **MOSEK**
- NAME: The name of the constraint assigned by the user or autogenerated.
- AT: The status key `bkc` of the constraint as in Table 11.4.
- ACTIVITY: the activity `xc` of the constraint expression.
- LOWER LIMIT: the lower bound `b1c` of the constraint.
- UPPER LIMIT: the upper bound `buc` of the constraint.
- DUAL LOWER: the dual multiplier `s1c` corresponding to the lower limit on the constraint.
- DUAL UPPER: the dual multiplier `suc` corresponding to the upper limit on the constraint.

- AFFINE CONIC CONSTRAINTS

- INDEX: A sequential index assigned to the affine expressions by **MOSEK**
- NAME: The name of the affine conic constraint assigned by the user or autogenerated.
- I: The sequential index of the affine expression in the affine conic constraint.
- ACTIVITY: the activity of the I-th affine expression in the affine conic constraint.
- DUAL: the dual multiplier `doyt` for the I-th entry in the affine conic constraint.

- VARIABLES

- INDEX: A sequential index assigned to the variable by **MOSEK**
- NAME: The name of the variable assigned by the user or autogenerated.
- AT: The status key `bkx` of the variable as in Table 11.4.
- ACTIVITY: the value `xx` of the variable.
- LOWER LIMIT: the lower bound `b1x` of the variable.
- UPPER LIMIT: the upper bound `bux` of the variable.
- DUAL LOWER: the dual multiplier `s1x` corresponding to the lower limit on the variable.
- DUAL UPPER: the dual multiplier `sux` corresponding to the upper limit on the variable.
- CONIC DUAL: the dual multiplier `skx` corresponding to a conic variable (deprecated).

- SYMMETRIC MATRIX VARIABLES

- INDEX: A sequential index assigned to each symmetric matrix entry by **MOSEK**
- NAME: The name of the symmetric matrix variable assigned by the user or autogenerated.
- I: The row index in the symmetric matrix variable.
- J: The column index in the symmetric matrix variable.
- PRIMAL: the value of `barx` for the (I, J)-th entry in the symmetric matrix variable.

- DUAL: the dual multiplier bars for the (I, J)-th entry in the symmetric matrix variable.

Table 11.4: Status keys.

Status key	Interpretation
UN	Unknown status
BS	Is basic
SB	Is superbasic
LL	Is at the lower limit (bound)
UL	Is at the upper limit (bound)
EQ	Lower limit is identical to upper limit
**	Is infeasible i.e. the lower limit is greater than the upper limit.

Example.

Below is an example of a solution file.

Listing 11.6: An example of .sol file.

Chapter 12

List of examples

List of examples shipped in the distribution of Command Line Tools:

Table 12.1: List of distributed examples

File	Description
25fv47.mps	A large linear problem from the Netlib library
cqo1.jtask	A simple conic quadratic problem
cqo1.mps	A simple conic quadratic problem
cqo1.ptf	A simple conic quadratic problem
dinfeas.lp	A simple dual infeasible linear problem
djc1.jtask	A simple problem with disjunctive constraints (DJC)
djc1.ptf	A simple problem with disjunctive constraints (DJC)
feasrepair.lp	An example demonstrating repair of infeasible problems
infeas.lp	A simple primal infeasible problem
lo1.jtask	A simple linear problem
lo1.lp	A simple linear problem
lo1.mps	A simple linear problem
lo1.ptf	A simple linear problem
milo1.jtask	A simple mixed-integer linear problem
milo1.lp	A simple mixed-integer linear problem
milo1.ptf	A simple mixed-integer linear problem
qo1.jtask	A simple quadratic problem
qo1.mps	A simple quadratic problem
qo1.opf	A simple quadratic problem
sdo1.cbf	A simple semidefinite problem with one matrix variable and a quadratic cone
sdo1.jtask	A simple semidefinite problem with one matrix variable and a quadratic cone
sdo1.ptf	A simple semidefinite problem with one matrix variable and a quadratic cone
sensitivity.ssp	Sensitivity analysis specification for <code>transport.lp</code>
transport.lp	A linear problem in the sensitivity analysis example

Additional examples can be found on the **MOSEK** website and in other **MOSEK** publications.

Chapter 13

Interface changes

The section shows interface-specific changes to the **MOSEK** Command Line Tools in version 11.0 compared to version 10. See the [release notes](#) for general changes and new features of the **MOSEK** Optimization Suite.

13.1 Important changes compared to version 10

- **Parameters.** Users who set parameters to tune the performance and numerical properties of the solver (termination criteria, tolerances, solving primal or dual, presolve etc.) are recommended to reevaluate such tuning. It may be that other, or default, parameter settings will be more beneficial in the current version. The hints in Sec. 6 may be useful for some cases.

13.2 Changes compared to version 10

13.2.1 Parameters compared to version 10

Added

- *MSK_DPAR_FOLDING_TOL_EQ*
- *MSK_DPAR_MIO_CLIQUE_TABLE_SIZE_FACTOR*
- *MSK_DPAR_SIM_PRECISION_SCALING_EXTENDED*
- *MSK_DPAR_SIM_PRECISION_SCALING_NORMAL*
- *MSK_IPAR_FOLDING_USE*
- *MSK_IPAR_GETDUAL_CONVERT_LMIS*
- *MSK_IPAR_HEARTBEAT_SIM_FREQ_TICKS*
- *MSK_IPAR_LOG_SIM_FREQ_GIGA_TICKS*
- *MSK_IPAR_MIO_CONFLICT_ANALYSIS_LEVEL*
- *MSK_IPAR_MIO_CROSSOVER_MAX_NODES*
- *MSK_IPAR_MIO_INDEPENDENT_BLOCK_LEVEL*
- *MSK_IPAR_MIO_OPT_FACE_MAX_NODES*
- *MSK_IPAR_MIO_RENS_MAX_NODES*
- *MSK_IPAR_PTF_WRITE_SINGLE_PSD_TERMS*
- *MSK_IPAR_READ_ASYNC*

- *MSK_IPAR_SIM_PRECISION*
- *MSK_IPAR_SIM_PRECISION_BOOST*
- *MSK_IPAR_WRITE_ASYNC*

Removed

- *MSK_DPAR_CHECK_CONVEXITY_REL_TOL*
- *MSK_DPAR_PRESOLVE_TOL_AIJ*
- *MSK_IPAR_INFEAS_PREFER_PRIMAL*
- *MSK_IPAR_INTPNT_MAX_NUM_REFINEMENT_STEPS*
- *MSK_IPAR_INTPNT_PURIFY*
- *MSK_IPAR_LOG_RESPONSE*
- *MSK_IPAR_LOG_SIM_MINOR*
- *MSK_IPAR_MIO_ROOT_REPEAT_PRESOLVE_LEVEL*
- *MSK_IPAR_PRESOLVE_LEVEL*
- *MSK_IPAR_SENSITIVITY_OPTIMIZER*
- *MSK_IPAR_SIM_STABILITY_PRIORITY*
- *MSK_IPAR_SOL_FILTER_KEEP_RANGED*
- *MSK_IPAR SOLUTION_CALLBACK*
- *MSK_IPAR_WRITE_DATA_PARAM*
- *MSK_IPAR_WRITE_GENERIC_NAMES_IO*
- *MSK_IPAR_WRITE_TASK_INC_SOL*
- *MSK_IPAR_WRITE_XML_MODE*
- *MSK_SPAR_WRITE_LP_GEN_VAR_NAME*

13.2.2 Constants compared to version 10

Added

- *MSK_CALLBACK_BEGIN_FOLDING*
- *MSK_CALLBACK_BEGIN_FOLDING_BI*
- *MSK_CALLBACK_BEGIN_FOLDING_BI_DUAL*
- *MSK_CALLBACK_BEGIN_FOLDING_BI_INITIALIZE*
- *MSK_CALLBACK_BEGIN_FOLDING_BI_OPTIMIZER*
- *MSK_CALLBACK_BEGIN_FOLDING_BI_PRIMAL*
- *MSK_CALLBACK_BEGIN_INITIALIZE_BI*
- *MSK_CALLBACK_BEGIN_OPTIMIZE_BI*
- *MSK_CALLBACK_DECOMP_MIO*

- *MSK_CALLBACK_END_FOLDING*
- *MSK_CALLBACK_END_FOLDING_BI*
- *MSK_CALLBACK_END_FOLDING_BI_DUAL*
- *MSK_CALLBACK_END_FOLDING_BI_INITIALIZE*
- *MSK_CALLBACK_END_FOLDING_BI_OPTIMIZER*
- *MSK_CALLBACK_END_FOLDING_BI_PRIMAL*
- *MSK_CALLBACK_END_INITIALIZE_BI*
- *MSK_CALLBACK_END_OPTIMIZE_BI*
- *MSK_CALLBACK_FOLDING_BI_DUAL*
- *MSK_CALLBACK_FOLDING_BI_OPTIMIZER*
- *MSK_CALLBACK_FOLDING_BI_PRIMAL*
- *MSK_CALLBACK_HEARTBEAT*
- *MSK_CALLBACK_OPTIMIZE_BI*
- *MSK_CALLBACK_QO_REFORMULATE*
- *MSK_DINF_FOLDING_BI_OPTIMIZE_TIME*
- *MSK_DINF_FOLDING_BI_UNFOLD_DUAL_TIME*
- *MSK_DINF_FOLDING_BI_UNFOLD_INITIALIZE_TIME*
- *MSK_DINF_FOLDING_BI_UNFOLD_PRIMAL_TIME*
- *MSK_DINF_FOLDING_BI_UNFOLD_TIME*
- *MSK_DINF_FOLDING_FACTOR*
- *MSK_DINF_FOLDING_TIME*
- *MSK_IINF_FOLDING_APPLIED*
- *MSK_IINF_MIO_FINAL_NUMBIN*
- *MSK_IINF_MIO_FINAL_NUMBINCONEVAR*
- *MSK_IINF_MIO_FINAL_NUMCON*
- *MSK_IINF_MIO_FINAL_NUMCONE*
- *MSK_IINF_MIO_FINAL_NUMCONEVAR*
- *MSK_IINF_MIO_FINAL_NUMCONT*
- *MSK_IINF_MIO_FINAL_NUMCONTCONEVAR*
- *MSK_IINF_MIO_FINAL_NUMDEXPCONES*
- *MSK_IINF_MIO_FINAL_NUMDJC*
- *MSK_IINF_MIO_FINAL_NUMDPOWCONES*
- *MSK_IINF_MIO_FINAL_NUMINT*

- *MSK_IINF_MIO_FINAL_NUMINTCONEVAR*
- *MSK_IINF_MIO_FINAL_NUMPEXPCONES*
- *MSK_IINF_MIO_FINAL_NUMPOWCONES*
- *MSK_IINF_MIO_FINAL_NUMQCONES*
- *MSK_IINF_MIO_FINAL_NUMRQCONES*
- *MSK_IINF_MIO_FINAL_NUMVAR*
- *MSK_IINF_MIO_NUM_BLOCKS_SOLVED_IN_BB*
- *MSK_IINF_MIO_NUM_BLOCKS_SOLVED_IN_PRESOLVE*
- *MSK_LIINF_BI_CLEAN_ITER*
- *MSK_LIINF_FOLDING_BI_DUAL_ITER*
- *MSK_LIINF_FOLDING_BI_OPTIMIZER_ITER*
- *MSK_LIINF_FOLDING_BI_PRIMAL_ITER*
- *MSK_LIINF_MIO_FINAL_ANZ*
- *MSK_OPTIMIZER_NEW_DUAL_SIMPLEX*
- *MSK_OPTIMIZER_NEW_PRIMAL_SIMPLEX*

Removed

- *MSK_CALLBACKCODE_BEGIN_SIMPLEX_BI*
- *MSK_CALLBACKCODE_IM_BI*
- *MSK_CALLBACKCODE_IM_CONIC*
- *MSK_CALLBACKCODE_IM_DUAL_BI*
- *MSK_CALLBACKCODE_IM_INTPNT*
- *MSK_CALLBACKCODE_IM_PRESOLVE*
- *MSK_CALLBACKCODE_IM_PRIMAL_BI*
- *MSK_CALLBACKCODE_IM_QO_REFORMULATE*
- *MSK_CALLBACKCODE_IM_SIMPLEX_BI*
- *MSK_DINFITEM_BI_CLEAN_DUAL_TIME*
- *MSK_DINFITEM_BI_CLEAN_PRIMAL_TIME*
- *MSK_LIINFITEM_BI_CLEAN_DUAL_DEG_ITER*
- *MSK_LIINFITEM_BI_CLEAN_DUAL_ITER*
- *MSK_LIINFITEM_BI_CLEAN_PRIMAL_DEG_ITER*
- *MSK_LIINFITEM_BI_CLEAN_PRIMAL_ITER*

13.2.3 Response Codes compared to version 10

Added

- *MSK_RES_ERR_GETDUAL_NOT_AVAILABLE*
- *MSK_RES_ERR_READ_ASYNC*
- *MSK_RES_ERR_READ_PREMATURE_EOF*
- *MSK_RES_ERR_READ_WRITE*
- *MSK_RES_ERR_SERVER_HARD_TIMEOUT*
- *MSK_RES_ERR_TASK_PREMATURE_EOF*
- *MSK_RES_ERR_WRITE_ASYNC*
- *MSK_RES_ERR_WRITE_LP_DUPLICATE_CON_NAMES*
- *MSK_RES_ERR_WRITE_LP_DUPLICATE_VAR_NAMES*
- *MSK_RES_ERR_WRITE_LP_INVALID_CON_NAMES*
- *MSK_RES_ERR_WRITE_LP_INVALID_VAR_NAMES*
- *MSK_RES_TRM_SERVER_MAX_MEMORY*
- *MSK_RES_TRM_SERVER_MAX_TIME*
- *MSK_RES_WRN_GETDUAL_IGNORES_INTEGRALITY*
- *MSK_RES_WRN_PRESOLVE_PRIMAL_PERTURBATIONS*
- *MSK_RES_WRN_PTF_UNKNOWN_SECTION*

Removed

- *MSK_RES_ERR_INVALID_AMPL_STUB*
- *MSK_RES_ERR_SIZE_LICENSE_NUMCORES*
- *MSK_RES_ERR_XML_INVALID_PROBLEM_TYPE*
- *MSK_RES_WRN_PRESOLVE_PRIMAL_PERTUBATIONS*
- *MSK_RES_WRN_WRITE_LP_DUPLICATE_CON_NAMES*
- *MSK_RES_WRN_WRITE_LP_DUPLICATE_VAR_NAMES*
- *MSK_RES_WRN_WRITE_LP_INVALID_CON_NAMES*
- *MSK_RES_WRN_WRITE_LP_INVALID_VAR_NAMES*
